SILVER LEGHORNS

LEGHORNS

S. C. WHITE LEGHORNS
S. C. BROWN LEGHORNS
S. C. BLACK LEGHORNS

Blue Ribbon Winners New York, Boston, Chicago and Buffalo

We have exhibition birds, that will fill your needs for any show, at a reasonable figure. We guarantee these birds to win, at no additional price. You run no risk. Do not delay ordering your breeding males until later as the early orders get the best selections. On account of cramped quarters we will make some special prices on S. C. White and S. C. Black cockerels. All these cockerels are early hatched and can win in any show. Our large illustrated catalogue is free.

Turtle Point Farm, **Saratoga Springs, N. Y.**

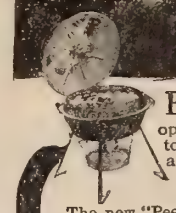
Peerless Automatic Incubators Now 60 to 1,000 Eggs



EVERY Sheer Incubator is a marvel of automatic mechanism. Heat and flame control, heat distribution, heat regulation, ventilation and moisture, every operation **automatic.** Only one adjustment. Biggest profit hatchers on earth today. Whether raising poultry 60 eggs at a time or on a large scale, there's a SHEER AUTOMATIC OUTFIT to suit your needs.

THE SUREST HATCHERS

The new "Peerless 60" is the first practical, **all-metal** fire-proof incubator with perfect heating, heat distributing and ventilating systems—**all automatic.** Natural as a nest. Never overheats. No fussing. Automatic flame control—no waste of fuel or heat. Fully equipped with wonderful Sheer Automatic Fixtures. **More profitable** than any large machine with single heating plant. Holds 60 eggs. A marvel at the price.

"Peerless Automatic" 200-Egg

is just big enough for the poultry raiser who wants to start small and grow big gradually. Equipped with the great Sheer Automatic Heating, Ventilating and Moisture Systems, Automatic Flame Control, Automatic Lamp, Sheer **Double-Compound Thermostat Regulator**—exclusive Sheer features that make the surest **hatchers in the world.** No more guesswork. The Sheer way **is the only way.**

"Peerless Automatic Multidek," 1000-Egg

is the biggest improvement in incubator design in the last generation. Not one big unit, but five 200-egg units in one, each a complete self-operating incubator, yet all 5 operating in **perfect unison.** Door of top section on a level with your eyes. Saves 6 times floor-space. No waste labor, everything within arm's length. **A world beater for profits.** Equipped with wonderful SHEER AUTOMATIC FIXTURES. Only machine for the big poultry raiser. Starts small raisers to big success.

200-Egg "Peerless"

Make Any Incubator Automatic

If you can't afford a new machine now, make your old incubator new and AUTOMATIC. Sheer Fixtures, Automatic Lamps, Regulators, Thermostats, heating, ventilating and moisture systems, incubator parts, fit ANY incubator. 25 years have made them the world's standard. Send today for facts, Free.

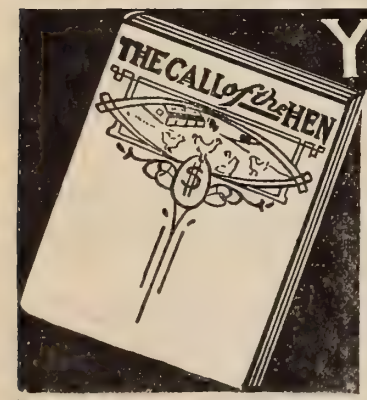
Attractive Printing.

SPECIAL—SURELY EVERY EXHIBITOR AT a fair or poultry show needs business cards and we can print you 1000 for $2.50 or 500 for $1.75 and illustrate them with cut of any variety that you breed. Now is the time to place your order Poultry Fancier, Hanover, Pa.

YOU NEED THIS BOOK!



In fact it is more than a book,
It is a Great Scientific Discovery;
IT IS A WONDERFUL SYSTEM OF SELECTION AND BREEDING FOR EGG PRODUCTION which is going to revolutionize the poultry industry.

What Edison has done in the realm of electricity, what Burbank has accomplished in the field of horticulture, Walter Hogan has done for the poultry industry in his New Book,

"The Call of the Hen"

IT ENABLES YOU TO EASILY CULL YOUR FLOCK. YOU CAN TELL THE HIGH PRODUCING MALES AND FEMALES BY A SIMPLE EXAMINATION AND TEST

DON'T KILL THE LAYING HEN, BUT SWAT THE DRONES

IF YOU keep a dozen hens you need this book. If you keep two dozen or more you couldn't afford to be without it if it cost you $10.00 a copy. Don't judge "THE CALL OF THE HEN" by other poultry books. It's more than a book. It's an Illustrated description of a New Discovery, revolutionary in nature, the result of a lifetime of investigation and experimenting

SWAT THE DRONES!! In every flock there are drones—"star boarders"—hens laying one, two or three dozen eggs a year. They are a dead loss. They "eat their heads off," living on the profits which your good layers produce. To trap-nest the flock is tedious and expensive—so much so that the average poultryman cannot afford it. By the Hogan system you obtain results of a year's trap-nesting by a simple examination requiring but a few seconds.

Hoganize Your Flock Now! Right Now, this month, is the time to cull your flock of hens, market your loafers, keep your workers, make room for young stock. By the Hogan method you can, not only select your good layers, but also good BREEDERS, both male and female, birds that will reproduce their kind and enable you to rapidly increase the average egg production of your flock.

Price Reduced to $1.00.

First Time the Book Was Ever Offered At This Price
Our "Money-Back" Guarantee Protects You

YOU TAKE NO CHANCES when you send us $1 for the new revised, cloth-bound, profusely illustrated edition of "THE CALL OF THE HEN." We do not ask you to take our word or it, nor the word of such men of unquestioned integrity as T. E. Quisenberry, Director of the Missouri State Poultry Experiment Station; Lyman C. Byce, President of the Petaluma Incubator Co., and a member of the Executive Board of the American Poultry Associaton; Michael K. Boyer, and others. You can be your own judge. Get the book. Follow its directions. Apply your own tests. Then if you are not satisfied—MORE THAN SATISFIED—send back the book and we will refund the money.

Certified Layers

English 200-Egg Strain

Our pens of *S. C. W. Leghorns, White Wyandottes, S. C. Reds* and *Buff Orpingtons* contain many of the world's champion layers. This bred-to-lay blood will surely put *your* flock into the money-making class. Among our 1913-14

Laying Competition Winners

are the following sensational pens:—

White Leghorns:—North American Internat. Competition:—Five birds laid 1139 eggs, 228 average. Won seven medals and cup.

S. C. Reds:—N. A. Competition:—Five birds laid 1043 eggs, 209 average. (Highest official Red record known.) Won three medals.

White Wyandottes:—Missouri Competition:—Ten birds laid 2006 eggs, over 200 average One layer made a record of 265 eggs.

The above 20 birds, three breeds, averaged 209 eggs each. Four of them laid 250 or better.

WHY ANCONAS ARE BECOMING SO POPULAR

By H. Cecil Sheppard, Berea, Ohio. President International Ancona Club.

After twenty years' experience as a traveling salesman, I am now having a good time running a poultry plant of my own. This happy change in business came through the laying ability of Anconas, so I take pleasure in writing a few lines in behalf of my business partner,—The Mottled Ancona.

I am a believer in the strenuous life, therefore, in choosing a business partner, I naturally desired one who was willing to excell in that direction. Am pleased to say that the Ancona hen has not disappointed me. She has proved herself to be a very worthy partner, and I have found her to be industrious profitable. I shall always have a grateful feeling toward her, because it was through her industry that I found myself in a position to resign my place on the road for more profitable work. I might say that there are many more who might enjoy more comfort and luxury, if they would give the Mottled Ancona a chance to help them.

As a fancier's fowl, the Anconas have many admirers. The feathers are black with a white tip, that makes a very pretty contrast. The male stands erect, and looks as if on dress parade at all times, in fact, it is difficult to get a flock of chickens more attractive in appearance than a flock of Anconas. But it is not about the Anconas as an exhibition fowl that I wish to write especially, but to present her as a utility bird.

As winter layers Anconas rank high and they do not have to be coddled or have an "open winter" to make a record. A doctor in Pennsylvania, wrote last spring: "My Anconas have laid well and consistently all winter, which was the longest and coldest for forty years. Half of them had their combs frosted when the mercury went to 30 degrees below zero on January 13th, yet on January 31st my 13 pullets laid 12 eggs."

Another Pennsylvania breeder wrote: "My 32 Anconas averaged during December and January 67 per cent, and the temperature ranged as low as 30 degrees below zero. The largest number of eggs for any one day, 29, was laid on the coldest day, January 10th. If the cold had any effect on them, it was evidently only in their greater activity and increased egg production."

And from the cold climate of Canada comes this testimonial: "My Anconas have surpassed my most sanguine expectations in regard to their laying ability. They beat everything around here. It seems almost incredible that hens could lay so well, but seeing is believing. The poultrymen here doubted at first, but are now convinced, after seeing what my Anconas are doing. They have been laying at a remarkable rate ever since they arrived."

A woman who has a flock of Anconas wrote recently: "My pullets are now laying and I am selling the eggs at 50 cts. per dozen. I call my chickens my 'bank' I have kept an account of what I sell each year. I make more clear money off my hens than my husband does at work, and he gets $2.75 per day. I am very proud of my chickens."

Standard Requirements.

Perhaps a few words about the color and other standard requirements would interest some of my readers. The male should be beetle green in color, with every fifth feather having a V-shaped tip of white, excepting the secondary and main flight feathers of the wing and the sickle feathers of the tail, which should all have a small tip not exceeding one inch in length. The undercolor should be dark and free from foreign color. Other things being equal, the specimen having the darkest undercolor shall have the preference. White feathers in the wing or tail are a defect and are considered objectionable. The plumage of the female is like that of the male, except that it is free from the gloss his plumage has.

There are two varieties of Anconas that are distinguished by the comb. In other particulars they

should be alike. The single comb of the male is of medium size with five deep, broad, even serrations forming a regular curve upward free from twists, curves and excrescences. The comb of the female should be medium size and deeply serrated. It should have five distinct points; the front portion of the comb and first point should stand erect, while the remainder of the comb should droop gradually to one side, but not so much as to interfere with the sight of the bird. The texture of the female comb should be finer than that of the male, and free from folds and wrinkles. Side sprigs on the comb of either bird are a disqualification.

The comb of the rose comb bird is medium size wide across the center, narowing slightly at the front and at the back, tapering to a good point. The top line from the front to rear should be parallel to the top line of the skull. The upper surface of the

comb should be nicely pebbled or corrugated. The comb of the rose comb hen should be very small, as compared with that of the male, but should be of the same character. The color should be a bright red and rounded at the rear to a blunt point. A comb that is too large upon the skull is defective.

The single comb birds are more extensively bred, as the rose comb is a newer variety. They were imported into this country several years later than the single comb birds, but are meeting with popular favor in some sections on account of the fact that their combs are less apt to freeze. Many single comb breeders are bothered with combs having too many serrations. The standard requires five, but the tendency is to have six or seven. Occasionally I have seen birds that had combs too large, that had a tendency to lop. The rose comb breeders find their troubles in geeting good spikes on the comb. Each year these troubles grow less, and in our largest shows to-day, Anconas of both varieties are found that have splendid combs.

The head is of medium size, moderate in length, rather inclined to be wide, and is carried well back. The beak is medium, with a moderate curve and it should be yellow, with black or corn colored shadings.

The back of the male should be of good length, broad and well filled carried in a slightly downward position, with a concave sweep to the tail, leaving no apparent angle between the back and tail, which should be large and well spread. The main tail feathers should be carried at an angle of 40 degrees from the horizontal. The sickle should be long and well curved, with an abundance of covert feathers.

The back of the female should show good length, should be broad and well filled, and it should be slightly inclined to a downward position, but not so pronounced as in the male. The tail of the female should be long, full, well spread and carried at an angle of 35 degrees. It has been a common defect among Anconas to find the tails carried at too high an angle. In our best shows birds with high tails are never placed, but these high tails are gradually disappearing. It will not be many years before this defect will be seldom found.

A few years ago red ear-lobes were also in evidence in most flocks, and where red ear-lobes were not found, we usually found some white in the face. These were serious defects, but they have practically disappeared from the best flocks.

The legs should be medium in length, but not too long, and they should be yellow or yellow mottled with black. Much stress has been laid on yellow legs. Some object to this on account of them not being in harmony with the color of the bird. Many breeders prefer a yellow shank mottled with black for this reason.

Ancona Size.

There has been considerable discussion about the size of the Ancona. Some breeders favor the very large type, but since the Ancona's mission is the production of eggs, the best breeders prefer eggs first and size second. They want a bird of good size, but they do not want their birds to be classed with the Minorca. One of the objections of breeding them too large is that they are more apt to become broody. The Anconas are active and hardy and flourish in close confinement. While a large per cent of the eggs hatch livable chicks, we have known of hatches of 100 per cent after the eggs were shipped three thousand miles. The chicks run forth from incubator or mother hen as alert as matured song birds. The young cockerels often crow at an early age of six weeks. Pullets frequently lay at four months of age when properly cared for. It is my belief that on account of their phenominal growth they will produce more meat at the end of ten weeks after hatching than any other breed of this class, or any of the larger breeds. The Ancona rooster makes surroundings cheerful with his hearty crow. He has an ever watchful and faithful care of his flocks, going into the nests and feed bins to

call the hens to eat. The eggs invariably hatch true to the characteristics of the breed, therefore, one can depend on getting good birds from choice matings.

We Ancona breeders believe that they are the birds to select if you want more chicks, more eggs, more meat, finer feathers, more activity, more cheer and less vermin and smaller rations than other breeds demand. There are many who are overlooking the splendid opportunities that are rapping at their doors. The American hen has great possibilities if she is given a chance. Her earning capacity is remarkable. If you want to appreciate how great she is, send to the government at Washington for the statistics regarding her annual value. Many a man has paid the mortgage off his home with chickens, and many a woman has added comforts and even luxuries to the home from the profits of the back yard flocks.

THE LOUSE QUESTION A LIVE ISSUE IN THE DEAD OF WINTER

By H. V. Tormohlen, Portland, Indiana

Those who should really read this article, no doubt will feel on reading the headlines that it is another one of those theories of inexperienced poultry writers and leave it at that.

All the articles on the lice problem that I have found raise a loud warning about the pest during the spring and summer and fall and seem to take it for granted that with cold weather lice will be a minus factor. But such is not the case. I had raised poultry for several years before I became alive to the importance of the lice problem in the dead of winter and its relation to the general health and efficiency of the flock. It is then the large body lice get in their deadly work. The awkward and ungainly young cockerels and old cocks are the first to fall an easy prey to these big body lice. Old hens next and the light laying class of young pullets are last to contract body lice because of their nest and thrifty habits about their personal cleanliness.

The poulterer must have as keen and educated an eye and as quick to note symptoms and what they indicate as the skilled physician.

Did you ever see head lice? This is an insult to the average poultryman for he knows head lice from feathers. Many farmers and back-lotters do not know a head-louse when they see it. You have probably seen this class of people. Let me ask another question. Did you ever see a young cockerel or a cock that had all the fine particles of the feathers of his entire body eaten off by body lice? If you have not you have not been a very careful observer. To the experienced eye it does not take very strong light to know when you have such a bird in hand.

It is generally known that body lice do not penetrate the skin or suck blood, that head lice are a species of tick and live on such with their heads burrowed in the flesh, that the little red mites also are equipped with skin penetrating mouths and live upon blood. But what do the body lice live upon you ask? They are scavangers if you please and live on the offals of the fowl. They depend upon moisture from the eyes and vent and for food upon the growing feathers and the constantly shedding epidermis, or skin.

Fowls bury their heads under their wings when they sleep or rather just above it in the feathers. In the early fall and winter fowls and especially young fowls are susceptible to colds. Their nostrils run just as in humans. During the night this excreta is deposited on the feathers on either side just above the wing secondaries. This makes a sticky filthy mass of feathers in a short time and for the time being a vertible paradise for those big body lice. If you have never seen these symptoms in your flock be a little more careful in your examination of your backward cockerels.

I have made it a practice for several years to paint a circle of blue ointment, using a portion about the size of a pea on each fowl, twice a year. This is about all that is necessary for the body lice as a general rule. The fowls will soon be entirely free of this pest if this treatment is followed for the fowls will keep the lice from getting moisture from the eyes by industriously scratching when one runs up his neck. The louse dies of thirst as a result, provided your fowls do not have a slight cold and the lice get their supply of moisture from the feathers above and back of the wings.

Colds are responsible for the lice and the lice are

responsible for colds. This is why youngsters contracting colds in the fall do not seem to yield to the best of treatment. It is because in a short time after getting a cold they become alive with lice and the lice so weaken their systems that no amount of cold and roup treatment will cure them. You are lucky if you do not have a few of this class in your flock from which you can gather practical information at once upon the winter louse question. On these fowls you will find the feather in a different condition than on a healthy fowl and it is because the feathers have been constantly preyed upon since early in the fall by lice and the tender particles of feather eaten as they protrude from the skin just as your hens eat the tender blades of grass in the spring as they first come through the ground. The skin will be rough and scaly too, on a fowl in this condition. Yet I find many cannot detect these symptoms in their fowls and as a result birds are said to go light, have rheumatism, cholera and numerous other diseases.

This fall I went to inspect a flock of a friend and customer while on a trip, and this friend complained of a cock two years old that I had sold him as a cockerel. Stated he was sick and stiff as if he had rheumatism. Did not know what was the matter with him. This party, naturally very careful and clean about his premises, had utterly failed to note the lice on this cock. He was deeply chagrined over the affair and wrote me in a couple weeks that the bird was nearly back in normal condition. I was in a show a few days ago and in looking over a nice string of birds of a certain experienced breeder heard him remark that a certain cock, pointing him out, was not making the show bird he expected and seeme dto be off condition continually. I examined the bird and found him a mass of lice and his feathers eaten as above described until there was no nice downy fluff beneath any moer at all in any portion of his body.

A fitting climax to the louse question in winter came a few days ago when a $25 Rhode Island Red cock was returned to a friend from a customer in the west. The cock had been shipped early in September in fine condition and well worth the money. The customer was more than pleased as evidenced by letters which my friend proudly displayed. Later the customer wrote that the cock was off his feet and seemed to be stiff and unable to stand in bad condition. My friend asked me what to suggest. I stated I was afraid it was rheumatism caused by over feeding of a high priced bird and subsequent liver trouble which brought on the rheumatism. I suggested Dr. King's New Life Pills which I found better for slight attacks of this kind than anything else. Nothing seemed to help the bird so the customer wrote and he finally became so disgusted that he wrote my friend that he could have the bird back by paying the express and added—"Keep the $25, I am stung". I was so familiar with the whole transaction and the bird in particular that I urged my friend to take the customer up on his proposition to ferret out what was wrong if the bird came back or to shut up the customer if he was attempting to defraud the seller by his constant kicking.

The bird came back. He could not stand up in the coop. Not in a long time have I seen such a sight. My friend at first was so dumfounded at the haggard condition of the fowl that he did not attempt to analyze the difficulty. He called my attention to the bird being back and in line with my recent experiences with others with lousy fowls, I suggested that he look for body-lice. The next day I heard from him and he declared he could not have stretched his imagination enough to believe so many lice could be on one fowl. Louse powder removed the lice, and blue ointment was applied about the vent. The cock ate all the corn from two fair sized ears of corn the next day. I warned my friend not to overfeed the glutten. He is on his feet and will make a winner yet at the late shows. Think of a poultryman with a big letter head buying a $25 bird and letting him slip through his hands in three short months like that for the lack of ordinary attention.

"FIRST PRIZE WYANDOTTE COCK PITTSBURCH PA 1914"
BRED AND EXHIBITED BY,
MAURICE F. DELANO. VINEYARD HAVEN MASS.
SUCCESSOR TO OWEN FARMS.

Use plenty of louse powder on backward birds that muss up their feathers about their wings with the excreta from their nostrils and use blue ointment on all your birds twice or three times a year as directed. I use Anverneous Carbolieum on the roosts once a year or once in two years for mites. Put it on hot. One application will keep lice and mites out of your houses three years but it is well to use it once a year. The old fashioned way of spraying with dips and disinfecting with sulphur fumes and what not is a waste of time. Blue ointment procured in bulk of any druggist and Anverneous Carbolieum, a proprietary product and advertised in all journals is all anyone needs and you only have to use the one twice a year and the other once in two years to be absolutely free of lice and mites the year round.

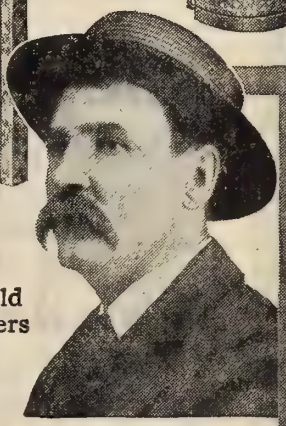
Let Us Tell You What We Have Found Out About Chickens—

H. H. Johnson *Mrs. M. M. Johnson*

Big Output Makes Low Price
Write for Catalog

WE have raised chickens ourselves—we have lived comfortably and saved money on a poultry income—and we have started 580,000 other people raising chickens for profits. Now, we want to start you. We want to lay before you the same plans that pointed the profit-making way to our 580,000 customers. Will you let us do it?

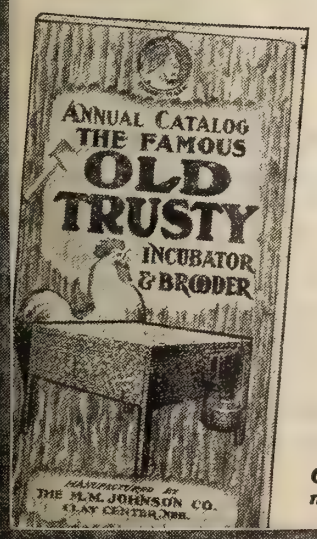
What we have found out about chickens, we have written into the Old Trusty book which we want to send you free. If you will read a few chapters in it, we believe that you too will go in for poultry profits on a scale that you never tried before. The point is this, we have always looked upon chickens as money-makers. Our success has been our best argument in getting others to enlarge their poultry operations for profits with the



M. M. Johnson
Inventor of Old Trusty

Old Trusty Incubator

Big Profit Maker for Poultry Raisers Everywhere



It has the same good reliable construction that M. M. Johnson, its inventor, put into the first Johnson made incubators, when he and Mrs. Johnson made that famous trip in a spring wagon through Nebraska, Iowa, Missouri and Kansas many years ago to introduce artificial hatching. He hauled his incubator over all kinds of roads, left it out in all kinds of weather, yet it turned out big hatches every time.

Big Production—Low Price

Last year we were called upon to manufacture about 80,000 Old Trustys. This year we look forward to sending out at least 100,000. We have our big factory ready for that output. Also we have our prices fixed to make quick sales.

Because of this enormous output, we are enabled to give the Old Trusty for from $3 to $5 less than any other factory would have to ask. We can buy raw material at lower prices, we can install machines that cut down manufacturing cost, and we can keep our men busy specializing on the various parts and turning out more pieces per day. But, we are not going to ask you here to buy an Old Trusty. What we want you to do is to

Mail a Postal Today for the Old Trusty Book

and read a few chapters on raising chickens for profits—then see if you cannot apply our suggestions in a way that means more money from chickens than you ever made before. Just a postal will do if you will please mail it today to

M. M. JOHNSON CO., Clay Center, Neb.

Old Trusty is still less than $10, freight paid to any point East of the Rockies—a trifle more to points farther West. 30 to 90 days' trial—10 year guarantee. Catalog free.

DON'T KILL YOUR CHICKS

WITH COAL GAS OR POISONOUS FUMES

The Paramount Colony Brooder---

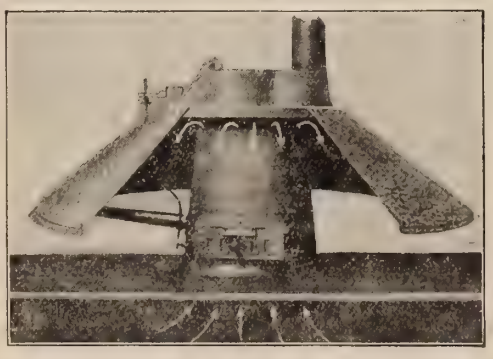
New, Original, Different --- Solves Every Brooder Problem

A perfect success, because constructed on perfectly correct, scientific principles by a practical poultry breeder, operating one of the largest commercial poultry plants in the country.

"It's in the Air!" Here, at last, chicken raisers, is the brooder you've been hoping would happen; a safe, simple, accessible, **absolutely reliable** coal-burning brooder with a wonderful new system of heat radiation that convinces your judgment and satisfies your common sense.

No coal gas or oil fumes can enter the room and poison the air, as the **"Paramount"** takes the cold, fresh air through a hole in the floor of the colony house, draws it up through the heater base, and heats it in a passageway formed by the air jacket and fire pot. This heated air is discharged into the hover near the top and diffused to uniform quantity and temperature to the backs of the chicks.

In operation, we do not draw foul air from the building into the hover, causing the chicks to crowd against the heater, but take the fresh air from out-doors. When heater is checked, the foul air from the building is carried into the stack. This original and ingenius system of fresh air ventilation is found in no other brooder. It is the special feature that gives the Paramount Colony Brooder a big advantage of all other machines.



Investigate This Wonderful Brooder

Results count! An **ounce of performance** is worth a **ton of promise.** The **"Paramount" makes good** because it is **made good.** It is the perfect brooder that meets every expectation in actual work. Chicken raisers who want the **newest** and **best** should investigate this successful machine, and judge of its merits from exact knowledge of its construction. A request brings full information. **Write us today!**

"Egg Basket Strain"
Single Comb Buffs

WINTER LAYING LEGHORNS

Bred to Lay and Win

At Missouri Egg Contest under Official Supervision, proved our claim of "Greatest Laying Strain of all Leghorns," by outlaying in 5 winter months all American blood S. C. White Leghorns, with one hen but 8 eggs below highest record hen in contest, and ending first half of contest close to top among 103 pens. Remember they've won at Chicago, Indianapolis, Los Angeles, etc. Take a tip now; they won't go round at our sale price.

EGG-BRED COCKERELS THIS MONTH $2.00, $3.50 AND $5 00

Dr. L. E. Heasley, Box F. Dorr, Mich.

POULTRY ADVERTISING

By C. F. Townsend.

Somebody told a half truth when he said that advertising is either a gold mine or a graveyard.

If properly managed, if properly followed up and if the advertiser "delivers the goods", then the gold mine results.

If the advertiser bungles, if he is a knave or a chronic liar, if he fails to properly follow up his answers, if his stock does not measure up to his claims—then the grave yard appears.

A few years ago, the biggest advertiser in poultrydom, whose appearance in the field resulted from the Pure Food Law, which broke up the mail order whiskey trade. This fellow knew no more about poultry than he did about truth, honesty or grammar. His cunning enabled him to play upon the cupidity of those who put money above all else. Thus, he was landed and boomed by certain greedy publishers to a nauseating degree. One of this sort actually declared, editorially, that "it was a blessed day for the poultry industry" when he became so interested therein; and another became so incensed because an article reflecting upon the fellow had got into his magazine that he actually insulted the writer thereof—through fear of losing a share of the "swag".

Backed by those greedy and guilty publishers—who knew, of course, yet were anxious to share his plunder—this scoundrel ran riot in his fraudulent advertising. His swindling claims caught the unwary. He sold hundreds of worthless birds and thousands of market eggs, which he bought here and there, at enormous prices and thus robbed beginners of thousands of hard earned dollars.

Like to him was a certain "system" faker, who made equally false claims of thousands to be made for a few hens in a back yard, and who sold vast quantities of worthless chicks of pine-stick-and-muslin "houses", and other truck, at enormous prices.

Frightened at last by the prospect of arrest and conviction for using the mails to defraud—which actually happened to one of the gang—the other chief offenders either fled the country or ceased their nefarious work.

But the poultry industry has received a staggering blow. Thousands of poor men and women had been robbed by these wretches—aided by certain publishers—and in their natural and just anger over the worthless stuff palmed off on them, they lost all faith in the poultry business. Worse yet, they classed all poultrymen as knaves and were outspoken in their belief.

The result had been a tremendous falling off in the sale of stock and eggs during the past two years, and the depression will continue until the memory of the while miserable crowd has faded away like a hideous dream.

This lesson should be taken to heart by every publisher. Some do not need it. To my certain knowledge, the Poultry Fancier does not contain, and under its present management never has contained a single misleading advertisement, nor one by a known "crook". On that account it has doubtless lost a great deal of money. But it will gain in the end, because its readers will have faith and honest dealers will know that in its columns they do not compete with any kind of knavery.

The poultry press is showing, I am pleased to note, a general improvement all along this line. There are fewer rascals than ever in the poultry business to-day and publishers are becoming more and more careful about accepting advertisements. True, there are still a few that are misleading—or worse. One prominent publisher allows a certain breeder to advertise a "flock average" of more than 250 eggs per hen yearly. Every experienced breeder knows that this statement is false; that no "flock" ever did or ever can show such an average. During the years of rigid experimental work, in which I have had carefully selected pens of the best possible layers from breeders like Fishel, Cook, Tompkins, Tecktonius, Brady, Noftzger and many others of their class—who have entered their birds only in my tests—the highest pen average has less than this fellow claims for a "flock". And every publisher who is not a downright fool, knows that a claim of that sort is false, misleading and injurious, that whoever buys stock or eggs from that particular breeder, expecting from his birds a "flock average" of more than 250 eggs yearly, will be grievously disappointed.

Bean's Ideal

Columbian Rocks

Winners at America's greatest shows. Exhibition and utility stock at reasonable prices. Eggs in season at live and let live prices. My birds are strong in utility qualities. Guarantee satisfaction.

THE 1915

STANDARD OF PERFECTION

WHAT IT MEANS TO YOU AS A POULTRYMAN

1st. It is the official guide in Judging, Mating and Breeding.

2nd. It contains a full description of all standard bred fowls, including chickens, turkeys, geese and ducks.

3rd. It also contains "full page, half-tone illustrations from idealistic photographs of living birds."

No breeder can afford to be without it. **Place your order now** so as to be sure to get your Standard when wanted. Price: cloth binding, $2.00; leather binding, $2.50, postpaid. All orders filled in rotation. Address

Poultry Fancier Pub. Co., Hanover, Pa.

WHITE CORNISH

Mountsville Farms makes big win at Great Hagerstown Fair:—1-2-5 cock, 1 hen, 2-3-5 pullet, 1st old pen, 1st young pen, best Cornish male other than Dark, best Cornish female, other than Dark. Stock for sale.

Mountsville Farms **Mountville, Va.**

I strongly urge every breeder who is preparing his advertising and catalogues for next season to be careful and conservative in his statements. Read the advertising and printed matter issued by the men I have named, also by Thompson, Hawkins, Bird Brothers, Martz & Son, Cleveland, Martin, Huston, Rankin, Delano and others of their class, note how careful they are in all their statements, how they stick to the absolute truth. Why, man alive! I would as soon believe the immortal George Washington was a traitor as that A. C. Hawkins would lie to make a sale! And the same is true of Maurice F. Delano, or my dear old friend, U. R. Fishel, or any of the boys I have named. They are in business to stay, and they stay because they know their business, fear God and honor their fellow men.

Advertise.

Advertise liberally. The more you spend for printers' ink, the more business you will do. Don't be afraid to "toot your own horn". But "toot" in tune. Don't try to play "sharp" to catch a "flat". It may work for a year or two, but in the end you will be down and out a "has been", wrecked in reputation, your name a stench in the nostrils, and possibly, you may be forced to do the state some service behind the grim walls of a prison.

Advertise in Season.

If you have for sale birds of exhibition grade, push them hard from August to January inclusive. It is during that period that buyers are out for birds to win the blue. Young stock, cockerels and pullets, should be offered from September to March. The season for such birds being much longer. Adult birds that have been in your breeding pens may be advertised at any time after the breeding season is over. The best period being from June to January inclusive. Eggs for hatching should be advertised liberally from December to May inclusive. Do not advertise eggs at half price after June first. Many do this, but, as a rule the results are very poor. I have made test hatches with numerous varieties during the summer. With the exception of Campines, Leghorns and the various Bantams, such hatches have never been satisfactory.

If you sell baby chicks, which I would not do except under especially favorable circumstances, advertise them from February to May inclusive.

Before you begin advertising, have your printed matter, catalogues, circulars, letter heads and envelopes, order blanks, return envelopes, and follow-up letters all ready. Thus there will be no delay in answering inquiries. This is of vital importance for prompt answers mean early orders.

Book your orders carefully, deliver the goods as agreed, meet all complaints fairly and if you are afflicted with a grouch, who wont be satisfied, send his money back and be done with him. He is probably a fraud as well as a "kicker" and you want nothing to do with a "picker" of that sort.

Great Orpington Truths

No breeder can sell you better stock at the price.
No breeder can sell you stock at a lower price.
No breeder can render you greater satisfaction.
We can please you in

BUFFS BLACKS and WHITES

In old and young stock. For further particulars write

HATCHING HENS AND INCUBATORS

By H. L. Goodwin, Farmington, Maine

The above is a seasonable topic at this time, and probably is the one uppermost in the minds of many in Maine who are either interested in poultry for profit, or just keep a few hens for their own pleasure and benefit. At least it is the subject of several letters I have recently received from Maine people who will answer the above description. They are all seeking either advice, or the opinion of others, and the general tendency seems to be the improvement of the flocks, which is a very hopeful sign, and in every way highly commendable. It costs no more to keep a pure bred flock than it does a mongrel one, and if the original outlay is a little more, their results are sure to be enough more satisfactory to more than offset this. But there are some who desire to better their flocks who are uncertain as to the best way to go about it. They want to know what is the best way. So far as I know there is no best way adapted to all conditions and circumstances, but there are several good ways.

The cheapest way and very likely the most satisfactory way, if you already have hens of mixed pedigrees is to buy eggs of the breed you desire of a breeder of known reliability, plenty of whom are doing business in our own state, set the eggs, hatch the chicks, rear them properly and then apply the axe or some other instrument of death to the old hens, and you have the pure bred flock you have longed for. That is a good way to do it on a small scale, and if you are not familiar with the incubator that is the best way to start a flock, for one must buy eggs from the best possible strain of the breed he wishes to cultivate if he expects to succeed, and the eggs cost too much money for all amateurs to feel like risking them in the unfamiliar incubator. Give a hen that is really broody, and a motherly sort of hen, and if the eggs are hatchable she may be reasonably expected to bring out a lively flock of chicks. With the incubator, except in the hands of the expert, there is a good deal of uncertainty, no matter how good the machine may be. With the experienced operator by far the cheapest and most successful method of breeding is by the use of incubators of good quality and known reliability.

I have often heard it remarked that eggs shipped a distance do not always hatch well. That is true, but the trouble is not often caused by the shipment of the eggs, for if they are carefully packed there is not more than one chance in a hundred that they will not reach their destination in just as good condition as they started, the only difference being in their increased age. If they were shipped within a day of the time they were laid a week of constant travel would not render them unfit for hatching, and they would very likely hatch as well as though they had never left the home farm. One great trouble is that eggs for hatching are often shipped too early. The percentage of fertility of early eggs in a cold climate is small, and while this is the case the fact that they do not hatch is laid to the fact of transportation, which has nothing to do with it. It is fine to have early hatched chickens, but the percentage of infertile eggs is so great that the early chicks usually cost more than they are worth; and they do not always turn out to be the best layers, either.

Later in the season, March or April, the eggs will be largely fertile, strong and in the best condition for hatching, and then with care good results are easily obtained, and then is the time to send away for high priced eggs with a reasonable certainty that they will not prove a disappointment.

Many prefer to buy the parent stock and raise the chickens from their own eggs, and this is a good way, though it costs more to get a start with the most valuable strain of any given breed than it does to start with eggs, but it is often most satisfactory, and is to be recommended where the circumstances are favorable, though either way of obtaining a new and more valuable flock should, if proper care is exercised, work out to the entire satisfaction of the breeder who gives his poultry the care and attention necessary to make the business a success—the same care and attention that is necessary to make any business a success.

There are a few things that should be remembered at any and all times and under all conditions. Never put a new flock in an old house without

S. A. NOFTZGER, **North Manchester, Ind.**

first having removed all the filth and had it thoroughly cleansed and fumigated. Do not set a hen or start an incubator without going through a similar process with everything that is to be used in the operation of incubation, including the hen, which should be treated for lice two or three times while she is setting. A good rule to make and follow is that you will keep everything about the poultry houses and yards in a sanitary condition, free from lice and mites at all times. If you are new at the business and propose to operate an incubator and brooder, get good ones and then follow the directions which accompany them down to the simplest detail if you want to be successful. The dealer knows more about his machine than some well-meaning friend of yours who has operated a similar incubator and thinks this one would work all right if run in the same manner. It might and then it might not, but the dealer's directions are accurate, not difficult to understand, and you have them in black and white ready for frequent consultation, and there is no excuse if you forget them and run the machine some other way and get bad results. However you decide to do it, if you have a mongrel flock, this spring is the best time you can possibly substitute for it a flock of pure breds. Study the breeds that your neighbors or friends are most attached to, then select the one that suits you best and go ahead. All breeds are good; be sure you get a good strain of the breed you adopt, and you can easily increase the income from your flocks without increasing the cost to keep them. Try it, reader.

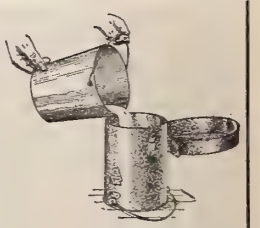
Fountain in use.

Keystone FOUNTAINS

PRACTICAL, CONVENIENT, EASY TO FILL

Not Injured by Freezing

Large comb fowls can drink readily from this fountain.



Method of filling.

We desire a dealer in poultry supplies in every town to handle our product. The demand has been created by careful advertising and a fountain that meets the demand of the careful poultry man. Dealers write for particulars. If your dealer cannot supply you send 25 cents for qt. size, 40c for 2 qt. size, 50c for gallon size, $1 for 2 gallon size. They can be secured at all leading dealers.

The Glen Rock Stamping Co., **York, Pa.**

$7.50 for a Genuine "BUCKEYE"

100% Hatch Incubator

anywhere east of the Rockies and north of Texas. A little higher in the west on account of freight rates. Not a toy nor experiment, but a genuine 60-egg scientific hatcher. Six sizes up to 600 eggs at proportionate prices. The incubator that gives you only 60% to 70% hatches is an egg waster. The "BUCKEYE" gets a chick from every hatchable egg. Nearly half a million in successful operation and sold by 1100 dealers.

40 DAYS TRIAL
Prove It For Yourself

Guaranteed to Hatch Every Hatchable Egg

Makes no difference what they TELL you, 70 per cent is NOT a good hatch. You get 100 per cent with the "BUCKEYE" every time, whether you understand chickens or not. Prove this at our risk. Try the "BUCKEYE" 40 days. If you don't get a chick from every hatchable egg, send it back at our expense. We make this unusual guarantee to prove that the "BUCKEYE" is in a class by itself and should not be compared with 70 per cent hatchers.

MAKING MONEY the BUCKEYE WAY

Free Book: "Making Money the Buckeye Way." Of great value to poultry raisers. Sent free with catalog and name of dealer. Write today.

THE BUCKEYE INCUBATOR CO., 542 Euclid Ave., Springfield, Ohio

Pratts Poultry Regulator

The best New Year's Greeting you can give your poultry is a generous supply of Pratts Poultry Regulator throughout the year. They will repay you with *more eggs, perfect health, and strong vitality.* All of these are especially important right now with the beginning of a new hatching season only a few weeks off. Costs so little. Does so much. A 25-lb. pail only $2.50 is the economical way to buy it. The $1.00, 60c., 50c. and 25c. packages are generous in size.

Pratts ROUP REMEDY (Tablets or Powder)

Protects your poultry from Roup, Colds and the whole train of diseases which come with January thaws, February freezes, and trying winter weather, generally. Like all Pratt remedies, Pratts Roup Remedy is guaranteed both to prevent and cure, or your money back.

In $1.00, 50c. and 25c. boxes.

Go to one of our 40,000 dealers or write us.

DO YOU KEEP AN Egg and Hatching Record?

If so, now is the time to begin and you should get a copy of our new poultry book

Poultry Common Sense

Containing feed formulas of all kinds, general principles in breeding, home treatment of poultry diseases, natural and artificial incubation in addition to a complete

YEARLY PEN, EGG AND HATCHING RECORD

The records are the result of the combined experience of several prominent and very successful poultrymen and are unquestionably the **simplest** and **most complete blanks** for keeping account of poultry ever devised. These blanks are copyrighted and are worth several times the price of the book. They are complete for a full year by months.

Price of Poultry Common Sense with the Records, 50 cents, or with Poultry Success one year 75 cents.

Address orders to

Poultry Success, Springfield, Ohio

Single Comb Rhode Island Reds

TESTED, TRIED AND TRUE WINNERS

Bred and Owned by
MIRIMICHI POULTRY FARM. FOXBORO, MASS.

THE LIBERTY BELL BIRD CLUB

By Lida May Briggs, The Farm Journal, Philadelphia

With farm help so hard to get and the fast-growing weeds such prolific producers, The Liberty Bell Bird Club of The Farm Journal, Philadelphia, calls the attention of the farmer to the wage earners on his place that he usually regards as pillagers and thieves. It has the Government report for its statement that the American sparrow family saved the sum of $89,260,000 to the farmers in 1910 in consuming weed seeds.

The song-sparrow's diet consists of three-fourths weed seeds, while the tree-sparrow consumes one-fourth of an ounce of noxious weed seeds a day. Half the food of the quail is undesirable weed seeds. Several thousand pigweed seeds have been found in the stomach of a single quail. The crop of a ring-necked pheasant from Washington contained 8,000 chickweed seeds and a dandelion head. More than 72,000 weed seeds have been found in the stomach of a wild duck taken in Louisana in February which shows that this bird is more valuable to the farmer alive than trussed on somebody's table. Weed seeds form the largest single element of food of the horned lark, and are also a large part of the daily diet of the meadowlark, bobolink, black-bird, chirping sparrow and chickadee. The mourning-dove is a strict vegetarian with a never-flagging appetite for weed seeds.

When a single plant of purslane is said to produce 250,000 seeds, black mustard from 10,000 to 15,000 and other field pests are as productive, the farmer should realize how important it is to protect his swift helpers who earn their own board, seek their own shelter, and if they could speak for themselves, would ask only that they should not be destroyed while they are cheerfully working in the farmer's fields and orchards.

While it is hard for one farmer to keep thoughtless hunters and other bird enemies from killing or driving away the little field helpers, united, the farmer folk can save many a feathered "field hand" who, in gratitude for protection, will pour out glad songs and give useful service.

The farmers in Warrick, Vanderburg and Gibson Counties, Indiana, have organized themselves into a farmers' tri-county union to protect the birds. Farmers in different parts of the county, with their boys, are joining The Liberty Bell Bird Club of The Farm Journal, Philadelphia, by signing and sending in the following pledge:

PLEDGE.

"I desire to become a member of The Liberty Bell Bird Club of The Farm Journal, and I promise to study and protect all song and insectivorous birds and do what I can for the Club."

. . . . . .

. . . . . .

The Club badge-button is sent free to each person who signs this pledge. There is no cost of any kind in joining this Club.

AN EATING PLACE POPULAR AMONG THE BIRDS.

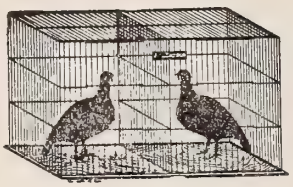
A new movement to keep the young folks on the farm and looking for the joys which can be found close at home is The Liberty Bell Bird Club of The Farm Journal, Philadelphia, organized for the study and protection of the song and insectivorous birds still left on the farms. The country mother who will sign its pledge with the young folks and go out with them now and then to become acquainted with the feathered tenants on the place, will get closer to the hearts of her children and at the same time renew her own youth. The farmer's wife who is lonely and weary of the monotony and isolation of her work may find a new interest in life, the most wholesome recreation and cheerful companionship, if she will cultivate the friendly little neighbors of forest and field.

To form a Liberty Bell Bird Club in the home or neighborhood, have each

ROUEN DUCKS

Breeding stock of this highly useful and attractive variety at reasonable prices. Eggs for hatching from carefully selected matings.

SWEETBRIAR FARM **Louis B. Schram, Prop.** **Elberon, N. J.**



SENT BY PARCEL POST: Let us show you how we can send you these wonderful coops by Parcel Post Delivered to your home for less money than you can purchase coops of inferior quality for in your city.

We also make a specialty of benching shows on a rental or we will sell you the entire outfit. In any event get our prices and terms before placing your order. We can please you and save you money. Send for catalogue.

Rabbit Culture and Standard

The best book ever published on Rabbits. Just what all the breeders are waiting for. It is the last work of the late Dr. Roth, finished by Charles T. Cornman, Editor of The Poultry Item.

The Only Official Standard

of Belgian Hares and every variety of Rabbits ever published. Profusely illustrated.

Every Variety Described and the Official Standards Given

It is full of information from cover to cover that is worth dollars to breeders of Hares and Rabbits. It effectually covers the subject of Feeding, Breeding, Housing, Diseases and their Remedies, Selection of Breeders and Judging, and is the only book published, giving the official standard of every variety. It will be the same to rabbit breeders that the American Standard of Perfection is to poultrymen. Every breeder needs one, and every breeder will eventually have one. **The price of the book is only 50 cents, with paper cover; $1.00 bound in cloth and $1.50 with flexible leather binding.** We can furnish it promptly on receipt of price.

Poultry Fancier, :-: Hanover, Pa.

person who wishes to join sign the following pledge and send it in to The Liberty Bell Bird Club of The Farm Journal, Philadelphia, when each signer will receive the badge-button of the Club free of charge. There are no assessments or costs of any kind after joining the Club.

PLEDGE.

" desire to become a member of The Liberty Bell Bird Club of The Farm Journal, and I promise to study apd protect all song and insectivorous birds and do what I can for the Club."

. . . . . .

. . . . . .

Pupils in schools where a branch of The Liberty Bell Bird Club of The Farm Journal, Philadelphia, has been organized are being encouraged in habits of economy and taught that what we give we should share, in conducting birds' restaurants and lunch counters near their schoolhouses this winter. Both boys and girls help to build the feeding station or clear a place near the schoolhouse where the remains of their luncheons and grains brought from home are offered daily to their appreciative bird boarders. A pan of water is also kept near by for the bird guests who are not too fussy to drink and bathe from the same vessel. The music for this love-feast is provided by the grateful guests who often fly to the topmost bough of the nearest tree to pour out a song of thanks. Again, they will pose upon fence or building for their entertainers to sketch or to write compositions about them.

Eleanor williams, a ten-year-old Liberty Bell Bird Club member of North Yakima, Washington, won first prize for her essay on birds at the Washington State Fair, in a contest open to all persons under eighteen years of age.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls t Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

DESTROYS VERMIN.

This paint is a strong disinfectant and effectually destroys disease germs and vermin. On this account it is especially valuable for the interiors (as well as exteriors) of Poultry Houses, Basements, Stables, etc.

Powdrpaint is made in White and 20 non-fading colors. It does not rub or flake off, but wears practically for all time on interior surfaces. White Powdrpaint is the whitest paint in the world and it stays White.

Poultrymen and Dairymen who once give this paint a trial and learn how much better and cheaper it is than whitewash and all such inferior preparations, use nothing else for purposes where Powdrpaint is adapted. Shipped to any part of the U. S. freight prepaid, if you order 100 lbs. or more.

Write to Mr. A. L. Rice, Manufacturer, 258 Wardwell St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

LEG BANDS

IDEAL.

This band has a double clinch, making it more secure than the single clinch style. In fact, when properly put on it is sure to stay there until purposely removed.

Ideal bands are made in 5 different sizes as per accompanying illustration, and numbered with raised numbers. State size of bands wanted with order.

DIRECTIONS.

First raise clinchers to a point, than form band over the finger, in as true a circle as possible and after band is applied to the fowl's leg, fasten by pressing clinchers down firmly as shown in cut.

Prices Prepaid.

Numbered to order, 12c per doz., 65c per 100.

Poultry Fancier, Hanover, Pa.

Imperial White Wyandottes

Have won hundreds of prizes for both myself and customers. Have hundreds of choicest birds ready to win for you at reasonable prices. Also lots of good breeding birds. Write your wants I can supply them at prices that will suit you.

DOUBLE QUICK GRAIN SPROUTER

THE PERPETUAL POULTRY SILO—Grows Green Feed While You Wait

The First, the Original, the Pioneer of All Grain Sprouters

The Double Quick Originates and introduces, others imitate and follow. Fully 100 Double Quicks to every half-dozen of all others combined. Now in its fourth year; in use in every state and territory and several foreign countries; many large poultry farms use from one to five. "I am enclosing my check for two more of your No. 5, Double Quick Sprouters. The one I bought some weeks since is doing fine work."—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass. "I ordered your No. 5 Double Quick Sprouter shipped to Maud L. Kaler, Columbia City, Ind. This one is proving so satisfactory that she wants another one of the same size and therefore you will find draft for this second sprouter."

LIBERTY BELL
RECORD 271 EGGS IN ONE YEAR
BRED BY
O. F. MITTENDORFF, LINCOLN ILL.

The above hen is one of the World's great layers, as well as breeders. Fully 90 per cent of her eggs incubated, produced strong livable chix. 8 of her daughters have thus far averaged **over 200 eggs each in less than 11 months.** Mr. Mittendorff is a specialty breeder of heavy laying Barred Plymouth Rocks.

Guaranteed Rupture Holder On 60 Days Trial

Won't Cost You A Cent If The Two Months Test Doesn't Prove All Our Claims

You can make a thorough 60 day test of this guaranteed rupture holder without having to risk a single cent. We'll make one especially for your case and let you see for yourself how it takes all the misery out of being ruptured.

Away With Leg.Strap and Spri ng Trusses.

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of **good** enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, legstraps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice. Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses than to perform operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under false and misleading names. Tells all about the care and attention we give you. Endorsements from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

INCUBATOR BARGAINS

One 240-egg Cyphers incubator, good as new, $16.00; one 350-egg Buffalo, used one season as relay, $15.00; one four-section Paradise brooder, in first-class shape, $32.00; also first-class White Orpington and Silver Campine breeders at bargain prices.

W. W. BOHN, WERNERSVILLE, PA.

ALL BREEDERS OF WHITE BIRDS

ATTENTION!

All breeders of white birds should know how to feed before, as well as after hatching, to produce a snow-white bird and avoid brassey appearances. Its all in the way you feed. Send for my guaranteed feeding formula, a larger egg obtained by using this formula. Fowls not troubled with feather pulling and if afflicted will cure them in two weeks. Ten dollars for this guaranteed feeding formula. Start this year's hatch right and be assured of snow-white birds. A choice lot of breeding, utility and exhibition S. C. White Orpington cockerels, ten dollars to fifty dollars each. The best cockerel raised this year, a winner for you, if you desire to exhibit. Standing offer of two hundred dollars for this prize cockerel. What will you offer. A buyer of a cockerel will receive feeding formula free. Eggs and baby chicks. Prices on application.

Poultry Raising for the Children

By Mrs. Geo. W. Church

All boys and girls like to earn money, which will be their own. On the farm, it is a most excellent plan to allow them to raise a flock of fowls of their favorite breed. This not only provides them with money, but also teaches them the value of it. Then too, if one encourages them to read poultry journals and to raise the birds in an up-to-date manner, the knowledge thus gained will often be of untold value to them in after years.

Children should be encouraged to do all the work of feeding and caring for the fowls and should be taught to keep them free from vermin and to clean the coops regularly. One should provide coops which are rat and weasel proof, as otherwise a whole season's work may be lost in a single night.

If chickens are to be sold on the market, a good sized, quick growing sort should be chosen. Our children are supplied with April hatched chicks which they are encouraged to feed and care for as they can be marketed at about three months of age. Earlier ones would bring higher prices but as they are more successful with the April chicks, results are about equal.

They also raise ducks and geese, but these are not hatched until May and June as for best results, they must have warm sunshiny weather and green feed of some sort.

Many people consider it "too much bother" to allow children to raise poultry of any kind, but we find it satisfactory in many ways.

Both our children have a bank account, not large, to be sure, but growing every year. They buy most of their clothes and have spending money at hand when needed, which is a source of great satisfaction to them as they feel that they are really "doing something".

Last, but not least, something of this kind occupies quite a bit of time which otherwise might be less profitably spent. Give the plan a trial, you will not be sorry.

VALUABLE BIRDS STOLEN.

The many friends of R. J. Walden will regret to learn that thieves entered his plant at Middleburg, Md., and succeeded in getting away with 57 of his very best pullet bred cockerels. These were very valuable birds and he estimated his loss at several hundred dollars. Notwithstanding the fact that 57 of his best were stolen, they still left one good enough to win 1st Pullet Bred Cockerel at the Great Williamsport Show.

Bulletin of the Storrs Agricultural Experiment Station

Fourth Annual International Egg Laying Contest.---Report for Month of November

By Wm. F. Kirkpatrick

The Fourth Annual International Egg Laying Contest conducted by the Connecticut Agricultural College and the Agricultural Experiment Station opened November 1st at Storrs, Conn. There are one hundred pens, an even thousand birds partcipating in the competition, not including a little more than one hundred extra or reserve birds. Thus there are a little more than eleven hundred birds to be trapnested during the year. It frequently happens, of course, that hens go into the traps without laying any eggs. Nevertheless they must be released the same as the producers. It is perhaps fair to assume that the traps must be operated six times for each five eggs that are collected and if these eleven hundrd birds average during the year to lay 150 eggs each it will mean that the traps at Storrs must be operated some two hundred thousand times during the progress of this competition.

In general the condition of the birds on arrival at Storrs was better than in any previous contest. It looks as if many of these birds had been bred for the purpose and it is certain that in many cases a good deal more time was spent in selecting the birds which were to enter the competition. There have been some colds, to be sure, but this would naturally be expected where birds have been shipped from many different points and in some cases over long distances. Furthermore it should be remembered that the majority of the hens in a contest of this sort must become accustomed to different climatic conditions, a different type and style of house, to new attendants, and new rations, so that all in all it is not surprising if some little time is required to get the pullets down to business. It is believed that the records given below are sufficient evidence that the birds are better this year than they were last.

These eleven hundred birds come from seventeen different states as follows: Connecticut, Rhode Island, Massachusetts, New Hampshire, Vermont, Maine, New York, New Jersey, Pennsylvania, Maryland, Virginia, Florida, Ohio, Iowa, Michigan, Missouri, and California. In addition to these, there are five pens from England. Three pens have been entered by the Rural New Yorker under th name of Favorite Hens. These include one pen of Rhode Island Reds, one pen of Leghorns, and one pen of miscellaneous pure breeds. The thiry hens in these pens are owned by thirty different women in ten different states. The Silver Wyandotte pen has been entered by the Silver Wyandotte Star and has been furnished by ten breeders from five different states.

The rations that will be used during the year are given below. It will be noted that only very slight changes have been made. The fish mash have been increased from 30 lbs. each to 45 lbs. each, thus making the dry mash 15 per cent meat. On the other hand the coarse beef scrap that was formerly given in the scratch ration has been dropped. The green food being used through the winter consists of mangel beets fed four to five times a week, and sprouted oats fed twice a week.

EXPERIMENTAL PENS — In the third contest the Storrs Experiment Station entered five pens each of White Leghorns and White Rocks, but in the present contest the Station has entered two pens each of five different breeds, namly: Barred Rocks, White Wyandottes, Rhode Island Reds, White Leghorns, and Light Brahmas. The result of last year's test seem to clearly indicate that sour milk as a ration for laying hens has a pronounced feeding value. The Station proposes to again try out the use of milk on the five breeds, feeding one pen in each case on the regular contest ration and the corresponding pen on exactly the same ration except that the fish and beef scrap are eliminated and sour milk substituted therefor. If it can be shown that milk is a good feed not only in one season but over a period of several years and not only for one breed but a number of breeds it will seem perfectly safe to draw conclusions regarding the value of milk for laying hens.

Ninety per cent. of the hens in the present contest produced eggs during the first month as against eighty per cent. that laid in the first month a year ago. The total production for all pens amounted to 4065 eggs or an average of a little over 4 eggs for each individual in the contest. This yield is relatively 1186 eggs more than for November a year ago.

The ten leading individuals for the first month are as follows:

R. I. Red, No. 422, Attleboro, Mass., 28 eggs.

White Leghorn, No. 598, Storrs, Conn., 25 eggs.

R. I. Red, No. 420, Bridgeton, R. I., 24 eggs.

Buff Wyandotte, No. 229, Holden, Mass., 24 eggs.

White Leghorn, No. 617, Redding Ridge, Ct., 23 eggs.

White Orpington, No. 967, Bridgeton, R. I., 23 eggs.

White Leghorn, No. 597, Storrs, Conn., 22 eggs.

R. I. Red, No. 261, St. Albans, Vt., 22 eggs.

White Wyandotte, No. 153, Columbia, Conn., 22 eggs.

White Wyandotte, No. 142, Houghton, Eng., 22 eggs.

Barred Rock, No. 3, Brookfield Center, Conn., 22 eggs.

The best individual record of 28 eggs made by a Massachusetts Red is five eggs ahead of the best individual for November last year. The best pen record of 178 eggs for the month made by a Connecticut pen of White Leghorns is 43 eggs better than the best pen record for November a year ago, thus the superior work both individually and collectively would seem to indicate better hens to start with.

The blue ribbon or first prize for the month of November was awarded to Windsweep Farm, Redding Ridge, Conn. whose White Leghorns produced 178 eggs during the month. Second prize was won by Ed. Cam of Houghton, England whose White Wyandottes laid 166 eggs. Third prize went to Merritt M. Clark of Brookfield Center, Conn. whose White Leghorns yielded 128 eggs for the month.

The colds that appeared in occasional pens at the beginning of the contest have been effectively checked by the use of a linament composed of one part chloroform and three parts of cotton seed oil. For rattling or difficulty in breathing the birds throat has been swabbed much the same as a child's would be for any sort of throat infection. In addition to this the nostrils

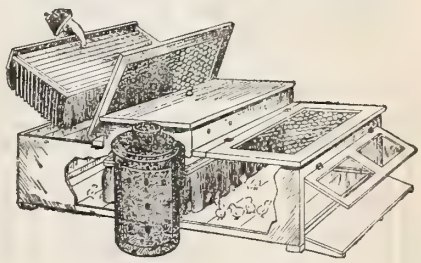
Here is the

Chick Saver



The "BUCKEYE"

KANT KROWD · KLOSE KONTACT

Brooders and Hovers

Most wonderful artificial mother ever invented. Over-crowding, over-heating and suffocation absolutely impossible.

The only hot water brooders and portable hovers that have been approved by the National Board of Insurance Underwriters.

You can raise chicks in zero weather with the "BUCKEYE" Kant Krowd, Klose Kontact Brooder. Every chick kept warm and cozy without crowding.

Save the 40% That Usually Die

Get full profit from your incubator by raising every chick! Steady, uniform heat with perfect ventilation. No foul odors. Klose Kontact for every chick—Nature's way. The "BUCKEYE" Kant Krowd Klose Kontact pays for itself in a short while by the chicks it saves from death.

You have only to see these brooders in order to realize their wonderful possibilities.

Write for our catalog of "BUCKEYE" Incubators and Brooders, also name of nearest dealer. Do this today.

The Buckeye Incubator Company

542 Euclid Ave., Springfield, Ohio

have been wiped clean with the same liniment and a little has been held over the bird's nostrils by means of absorbent cotton in an effort to have the hen inhale a little of the liniment. In cases where the eyes are infected it is usually better to use a milder remedy as the chloroform is somewhat drastic to apply to these parts.

The contest suffered the loss of just one hen during the month of November or one tenth of one per cent. of the flock. Should this same low morality prevail throughout the year it would mean the loss of less than 1¼ per cent. or only about a dozen birds from the flock of one thousand. The management of the contest, however, hardly expects to hold the mortality down to such a low figure because there are yet many things to contend with before the year is completed, such as for instance, cold in winter, heat in summer, inverted oviducts which are prevalent during the season of unusually heavy egg production.

The ten leading pens for November are as follows:

Windsweep Farm, Redding Ridge, Conn., White Leghorns, 178.

Ed. Cam, Houghton, near Preston, England, White Wyandottes, 166.

Storrs Exp. Station,* (Sour milk pen), White Leghorns, 143.

Merritt M. Clark, Brookfield Center, Conn., White Leghorns, 128.

Hillview Poultry Farm, St. Albans, Vt., Rhode Island Reds, 126.

Storrs Experiment Station,* White Leghorns, 101.

Ellis W. Bentley, Windham, N. Y., White Leghorns, 100.

Albert Sonderegger, South Coventry, Conn., White Leghorns, 98.

Francis F. Lincoln, Mt. Carmel, Conn., White Leghorns, 97.

Manor Poultry Farm, Manorville, L. I., White Leghorns, 94.

P. G. Platt, Wallingford, Pa., White Leghorns, 94.

Merritt M. Clark, Brookfield Centre, Conn., White Rocks, 94.

*Not in competition.

Lake Park, Ga., Nov. 23, 1914.

H. I. Co.,

Salem, Va.

In control chick bowel troubles by the "OCLUM METHOD". Every one wonders why I do not lose chicks. Out of last 1000 hatched (some from pick up eggs) I have over 975 at 6 weeks old, over one pound weight on an average. Parties come from surrounding counties to see the chicks.

Truly,

Geo. E. Worthington.

Can any Poultry Expert who does not use the "OCULUM METHOD" equal this?

NATIONAL BRONZE TURKEY CLUB MEETING.

The Annual Meeting and Club Show of the National Bronze Turkey Club will be held in connection with the Poultry Exhibition of Pittsburgh, Jan. 18th to 23rd. The Club Meeting will be held in the Exposition Buildings, Thursday, Jan. 21st, at 2 o'clock P. M.

The Club and the Poultry Exhibition of Pittsburgh combined offer $60. in cash specials, three silver cups, and special ribbons. These specials with the liberal regular cash prizes offered by the association should bring out one of the largest and best classes of Bronze ever shown All club members are urged to be present and exhibit their birds.

Breeders who are not club members and wish to compete for these specials should join the club before the show. Send the $1. membership fee to Chas. E. Bird, Secretary-Treasurer of the club, Myersdale, Pa.

PERSIMMONS FOR POULTRY.

Editor Poultry Fancier, Sir:—

For the benefit of poultry raisers in localities where persimmons abound, I suggest that the fruit be fed about 3 times a week to yarded fowls. I fed 5 quarts to 30 hens, I mashed the fruit and mixed in 1 quart of cornmeal. I began about Sept. 15, I have one tree ripening at that time, large fruit with little acidity, a pretty golden color with a pink cheek and white bloom. The alternate mornings I chopped up 10 quarts of apples and mixed with meal. This is a great saving in feed bills and a most wholesome feed. The persimmons at this date Dec. 4, are about like dates partly dry and very sugary.

Elbert Wakeman,

Sandgates, Maryland.

Greider's Fine Catalogue

1915

and calendar of pure bred poultry; 70 varieties illustrated and described, many shown in natural colors. Perfect guide to poultry raisers—full of facts. Low prices on stock and eggs for hatching. Incubators and brooders. 22 years in business. You need this noted book. Send 10c for it—today.

EXTRA SPECIAL OFFER

TO

Classified Advertisers

The season is again here when you must decide in what Journal you intend to place your classified advertising in order to secure the best possible results from your investment. We are therefore appealing to you, in behalf of the Poultry Fancier, and submit the following reasons why we believe it will be to your interest to use the Poultry Fancier as an advertising medium through which to dispose of your surplus stock and eggs during this season.

First; the Poultry Fancier meets the approval of every fairminded poultryman, on account of the principles for which it stands.

Second; the Poultry Fancier reaches every section of the United States, Canada and many foreign countries, and its circulation at the present time is increasing by leaps and bounds. Everyone of our subscribers is a live, wide-awake poultryman or poultrywoman, who is interested in the highest welfare of the poultry industry in this country. Without question they will prove a valuable asset by way of increasing your business through orders for either eggs or stock.

Third; the Poultry Fancier is no experiment—it is the poultryman's friend and its aim has always been to aid every man and woman who raises chickens, along every possible, honorable line. In other words, the Poultry Fancier is published in the interests of the rank and file of poultrymen. Again, we own our own equipment and therefore, can give you better value for your money than almost any other poultry journal published in this country.

Now Here Is Our Proposition

A 30 word classified ad, 3 months, right in the heart of the season, for $3.00, the regular price is $5.40; or we will give you a 30 word classified ad, 6 months for $7.50, regular price $9.00; or a 30 word classified ad, 12 months for $14.00, the regular price $18.00. All words in excess of 30, will be charged at the regular rate of 6 cents per word per each insertion on a 3 months ad, or 5 cents per words on each insertion for 6 months or 12 months ad.

Write your name and address plainly and keep us informed from time to time just what results the Fancier is bringing you.

POULTRY FANCIER PUB. CO., HANOVER, PA.

PENNSYLVANIA CHICKEN CHATTER

JAMES T. HUSTON
Williamsport, Pennsylvania
Editor

The Chronic Calamity Howler, who finds his way into the "chicken fancy" as well as anywhere else, can take a seat as far back as he can get, and there proceed to try and forget that which he has been predicting "That this would be an off year with the Shows, etc."

With the Season starting with Syracuse, this has been a most wonderful year, in the size and quality of our larger poultry exhibitions, Allentown as big, and classy as ever, Hagerstown with her seventy-five hundred birds and the greatest quality of her many years as the leading Fall show of the Country, Williamsport, Penna. starting off the Winter season, with the largest show in her history, having a grand total of twenty-four hundred birds and exhibitors showing from North, South, East and West, Buffalo the week following, with the largest and greatest exhibition held in this City, the mother of the American Poultry Assn., The Palace a week later, and with the quarantine depriving her of hundreds of birds from certain States, yet with it all the Palace Show of 1914 was the greatest in her history. Is this not indeed sufficient cause, for the grumbler, to stop, and see that nothing can interfere with the Poultry business, there is nothing the matter with the business, but rather a fear among a few, that certain conditions will arise to harm it. "Forget it" and get down to work, and put the hammers away, and enjoy to the full the prosperity which is bound to come.

"The early bird catches the worm" this cannot be better applied, than to the poultryman. While we are just at the start of Winter, yet with the fancier this should be a season of careful study of your flocks, if you are to be successful next season, now is the time to plan every detail. Do you need a male for a certain purpose? Do you need a female to improve a certain defect in your line? Are your coops, houses, etc. in proper shape for the coming breeding season? Ask yourself more questions of like importance and see whether or not you may not lack in some detail, and at once start to overcome it.

The Poultry Journal is absolutely necessary to every one who keeps poultry, and while you may have heretofore confined your reading of some to certain articles which interested you particularly, begin now on reading the advertisements, make them a study, do not satisfy yourself with reading only those which represent your particular breed, but become acquainted with them all, thus learning to know the men and women who make up this great fancy.

Mr. Frank McGrann, the newly elected Pres. of the Penna. Poultry Society, has at once become active in the administration of the affairs and interests of the Poultry Industry in the State of Penna. and his quick action in connection with the quarantine on live stock, explaining to the fancy at large, the interpretation regarding same, was very timely. It is this activeness in affairs of this nature that count.

Dr. Weeds of the American Poultry Journal, cannot know, just how much the "Chick Chats" by Mr. H. P. Schwab in that Journal are relished by the Poultrymen of the East, or he would have refrained from his criticism. Perhaps it is the truth, that as many of the fanciers in the East are of such a serious mind that the Dr. thought it impossible for them to appreciate the witty sayings of our friend "Henry."

Mr. Geo. J. Hanks, Secy. of the Williamsport Show, is spending a much needed vacation, taking in by the way of interest the large plants of New York and New Jersey. Mr. Hanks was lately elected State Vice Pres. of the Ancona Club, and we predict that he will display the same interest in this Club, and the position he fills, as he did towards making Williamsport Show the greatest in it's history.

The Board of Trade of the City of Williamsport, Pa. established a precedent which would be well to be followed by other like bodies in other Cities. With their assistance, it was possible that over fifty thousand persons visited and saw the Show put on during the week of Nov. 17.

Mr. Frank Platt visited the Williamsport Show for the first time, came to spend a day, but remained over the week. Ask Frank how he liked it? The Williamsport management only desire that those who never have attended their exhibitions will do so, as they have evidnce that once a visitor at this show, all come back.

Fifteen years ago the price of eggs in the province of Shantung China, was $1 for 900 eggs. Now the price has risen to $1 for 360. Twenty-seven million eggs were exported from this province in 1913, most of which went to England.

Few Chinese poultry raisers possess more than a dozen or so hens. They hatch most of their chickens in earthenware incubators, which are heated by the fire which warms the living rooms and the beds—thus all the heat is saved. We have the word of our consul at Chefoo that old women frequently incubate eggs by carrying them strapped about their waists under their outer garments. This is carrying economy to the limit, it would seem.

Most Chinese families are too poor to eat eggs even at the low prices mentioned and therefore the entire product, except that portion used for hatching, is sold. On the average ten Chinese eggs weigh a pound.—Farm and Fireside.

ASTHMA
AND CATARRH
Try Before You Pay
SENPINE, the great discovery for ASTHMA, HAY FEVER, BRONCHITIS and CATARRH, has produced wonderful results with thousands of the most stubborn cases.
If you have experimented with other treatments and have failed do not be discouraged, but try at our expense this truly meritorious remedy.
Send right now for a free trial before you forget it. Address

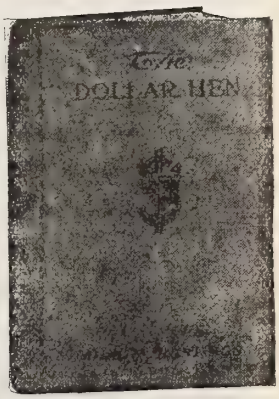
"DOLLAR HEN"



"One of the Most Practical and Best Books"

John L. Coburn, Secretary of the Agricultural College, of Utah

"Experience is a dear teacher." It is therefore to your interest to profit by the experience of others. Milo M. Hastings, formerly in charge of the poultry investigation of the United States Department of Agriculture, has probably had greater experience and opportunity for observation than any other poultryman in America. He has written the book, "The Dollar Hen," in which his experience and observations are recorded for the benefit of you, who should not pay the price of experience in order to learn the way around the innumberable pitfalls. The maelstrom of misinformation is fatal to the unwary poultry raiser. Why not know, when knowledge is so easy and cheap to acquire? Read what one agricultural college thinks of

"THE DOLLAR HEN"

Agricultural College of Utah,
Logan,, Utah, Feb. 1, 1912.
National Poultry Pub. Co.,
Syracuse, N. Y.,
Gentlemen—Yours of the 27th ult., regarding poultry books at hand. In reply to same, beg to state that we expect to use the book, "The Dollar Hen," in our poultry classes at this institution. In looking same over will say that this book appears to be one of the most practical and best books on the market at this time.
Very respectfully,
(Signed) JOHN L. COBURN,
Secretary.

Until we know from personal experience the vaule of a book, we must judge its worth from what those say who are capable of recognizing the good among so much that is worthless. We cannot ignore such commendation as that contained in the letter above.

For Only $1 you can secure "The Dollar Hen" and one year's subscription to the Poultry Fancier. Either book or magazine is worth more than the price of both. Send your name now.

Asher D. Strickler, Reading—Second and third cocks, third and fourth hens.

Why Moist Mash is Condemned

By Henry Johnson, Yardley, Pa.

Moist Mash is quite generally condemned. This is not the fault of Moist Mash but rather the failure of poultrymen to appreciate just what it is. I will endeavor here to explain, and to show clearly the advantage of feeding Moist Mash.

We are all interested in Good Feeding, for this brings us success. Good Feeding is the supplying of the required nutrients to our birds, in the best form and at the lowest price. Ample money to go on the market and purchase all kinds of food stuffs and supply them to our stock does not necessarily mean Good Feeding. Results must be obtained economically, for the poultry industry can only thrive as it prospers.

Every fowl requires a certain amount of food for sustenance. The surplus consumed by the birds goes to flesh or egg as the case may be. From this course of reasoning it is plain to see that the larger a chicken's production, the greater the economy of the production. Good Feeding coupled with good care and management will bring us safely to the desired end.

Now what is it outside of supplying the proper nutrients in proper ratio that constitutes Good Feeding? Just this. That of two feeds which are alike in all other respects, the one most readily eaten will be the most effective. Threin lies the secret of the Moist Mash—it is more relished and better digested than either the Dry Mash or Wet Mash. But why condemn it? That brings us to ask, "Just what is Moist Mash?"

Moist Mash is a properly balanced ration of dry mash through which a minimum amount of water has been evenly distributed by means of thorough mixing. The even distribution of a minimum amount of water through a dry mash is a difficult task. At least it is by hand. There is a great temptation to use too much water and then you have Wet Mash. Wet Mash is not relished by birds. It will cause "crop bound", bowel trouble, etc. Wet Mash is justly condemned but it should not carry with it the condemnation of all mashes in which water is included. This is a grave mistake. Why will people jump from one extreme to another? Especially now.

Thus the whole secret of success with Moist Mash is in the mixing. If it is not properly mixed it is not eaten with a relish. If your birds do not eat with a relish you are not a Good Feeder. If you are not a Good Feeder you are not an economical poultryman. "The poultry industry can only thrive as it prospers."

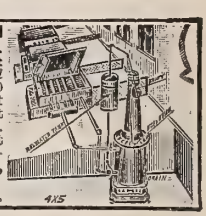
Since the advent of the AFTON FARM FEED MIXER the proper mixture is easily obtained. This practical device accurately distributes the water through the mash so that the minimum amount is used. The result is a Moist Mash that is eaten with a relish, supplying the required nutrients to the bird, in the best form, at the lowest price. It offers a speedy and paying solution to this oft-debated feeding problem.

GREAT BARGAINS

For the next 30 days we will sell cockerels of the following breeds; viz, **WHITE WYANDOTTES, MOTTLED ANCONAS, SILVER CAMPINES,** any of which are fit for the show room at from $2 to $5 each. Every bird bred from heavy laying strains. A limited number of two-year-old **ANCONA HENS,** at rock bottom prices. Satisfaction guaranteed or money refunded.

Lone Oak Poultry Yards, - Batavia, N. Y.

RIPPLEY'S **Combination Hot Water Heaters, Brooder and Poultry House Heaters and Steam Feed Cookers.** And **Rippley's Square All Galvanized Steel Hot Air Drums** and **Hovers.** *Are used and recommended* by noted breeders. Will heat Hovers from 25 to 100 ft., also heat buildings or cook feed for stock, heat water in tanks. No other heaters on the market like them. Used by 20 State Experiment Stations. We furnish Piping, Hovers and Heater, or any part of outfit. Write for catalogue showing these outfits, also Rippley's Egg and Chick Shipping Boxes, Exhibition Coops, Whitewashers, etc.



RIPPLEY MFG. CO., BoxF. Crafton, Ill., U. S. A.

CHICK and EGG SHIPPING BOXES Ship chicks or eggs safely in "H & D" Boxes. Chicks cannot smother or sweat. Eggs will not break. Waterproof, sanitary, compact—handy to use. Strong but light. Made of double faced, corrugated jute board. Cut down your express bills—guarantee safe arrival of contents.

"H & D" PARCEL POST SHIPPING BOXES

We make up boxes and cartons for any purpose. Write us what your products weigh, and size package you wish, for special prices. Send for free booklet, **"How to Pack It for Parcel Post."** Also write for free booklet of "H & D" Fireless Brooder.

THE HINDE & DAUCH PAPER CO., Dept. R Sandusky, Ohio.

Hens Work More Days Than Men

Record-Breaking Pen of Heavy-Laying Leghorns Now Owned in Philadelphia.

Three hens which work more days in a year than the average business man, have come to Philadelphia to live —and lay. Their official records are 264, 263 and 256 eggs in one year, their average being 261. As a hen never lays more than one egg a day, this represents 261 days' work, or more days, after deducting Sundays, holidays and vacations, than the average business man spends at his office or store.

These birds are the three in the foreground in the photograph, counting from the left. The photograph shows the entire pen of ten birds, whose total egg production for one year was 2202 eggs, or an average of over 220 eggs per bird. This is an official trap nest record. It having been made in the International Egg Laying contest running at Thorndale, Pa., the past year.

These birds have been bought for a big price by the Pratt Food Co., of this city, and, together with two other birds, which are full sisters and were held in reserve at the contest, will be used in further breeding and laying tests at the Pratt Experiment Station, Morton, Pa.

This record of 220 eggs in one year beats by 129 the record of the winning hens at the previous International contest, or over a dozen eggs more per hen. When it is recalled that last year's winners were valued at $1,000, it is seen that the Philadelphia birds undoubtedly comprise the highest scoring and most valuable pen of ten sngle comb White Leghorns in America, from an egg-producing viewpoint.

It is interesting to note that the average Leghorn hen weighs only about four pounds, or say 40 pounds for this pen. Their eggs, averaged at two ounces each, weighed almost 275 pounds. Thus the hens produced in eggs nearly seven times their own weight.

Figured at 35 cents a dozen, 2202 eggs were worth $64.23, which after deductng $1.60 per hen for food, leaves a profit of $48.23.

Can any industry show a higher return considering investment and labor? We doubt it.

The record of the birds shown in this illustration becomes even more astonishing when one takes into consideration the following facts: In the International contest there were five hundred fowls in competition, representing the pick of the best layers of Europe and America. Only four pens (5 birds each) laid above 1100 eggs and only 16 pens went above 1000. Only one out of every four birds laid 200 eggs or over, and the entire average of the 500 birds was but 170 eggs each. The ten birds in this lot shown averaged 1100 eggs to the pen (5 birds), an average of over 220 eggs apiece, or 50 eggs per bird above the contest average. There is one thing strikingly apparent about the above birds that 3—FANCIER THREE 3 FANCIER 3 T seems to set them off from what has previously been generally accepted as the English type of heavy egg-laying Leghorn. That is the close approximation to the American type of bird. There is a certain pleasing flow to the lines, a refinement of appearance that has heretofore been conspicuous by its absence, but the long black, deep body, heavy comb, alert appearance are still there.

Madison Square Garden

To the Editor Poultry Fancier,
Dear Sir:—

Our 26th Annual Exhibition to be held February 12th to 18th seems to be attracting unusual notice from the Fanciers and Breeders and in all of its departments. The advance request for Premium Lists were heavier than ever before. These Premium Lists have been in the mail for some time but for the convenience of your readers I here repeat the list of judges:

JUDGES OF POULTRY.

Henry P. Schwab, Irondequoit, N. Y. Barred Plymouth Rock Pens, cocks and pullets.

Louis P. Graham, Vineland, N. J. Barred Plymouth Rock Hens and Cockerels and Columbia Plymouth Rocks.

Louis C. Bonfoey, Plainfield, N. J. White Plymouth Rocks; White Faced Black Spanish and any other variety.

George W. Dakin, Roxbury, Mass. White Wyandottes.

W. B. Atherton, Randolph, Mass. Dominiques; Buckeyes; Red Caps; Creve Coeurs; La Fleche; Sumatras; Silkies; Sultans and Frizzles.

W. H. Card, Manchester, Conn. S. C. Rhode Island Reds.

Wallace R. Pierson, Cromwell, Conn. S. C. Rhode Island Reds.

B. W. Rankin, Topeka, Kansas. Light Brahmas.

Charles I. Balch, Manchester, Ct. Light Brahmas.

W. J. Stanton, New York City. Dark Brahmas and Cochins.

F. L. Sewell, Niles, Michigan. Langshans.

Irving F. Rice, Cortlandt, N. Y. White Leghorns.

George H. Burgott, Lawtons, N. Y. Brown, Buff, Black, Silver and any other variety Leghorns.

J. C. Punderford, Freneau, N. J. Buff Plymouth Rocks.

J. P. Van Alstyne, Kinderhook, N. Y. Columbian and Golden Wyandottes and Silver Penciled Plymouth Rocks.

W. G. Minich, Carlisle, Pa. Partridge Rocks; Blue Andalusian.

Dr. A. T. Beckett, Salem, N. J. Silver Laced Wyandottes.

Miss Alice Hales, Ridgewood, N. J. Dorkings.

J. H. Drevenstedt, Buffalo, N. Y. Black, Buff, Partridge and Silver Penciled Wyandottes; Javas and Cornish.

J. H. Minshall, London, Ont. Minorcas.

A. H. Emch, Toledo, Ohio. Anconas.

Len Rawnsley, Columbus, O. Buff and Black Orpingtons and Sussex.

Richard Oke, London, Ont. White, Blue, Jubilee and any other variety Orpingtons and Polish.

Arthur O. Schilling, Buffalo, N. Y. Houdans and Faverolles.

George L. Young, Brooklyn, N. Y. Clean Leg, except Game Bantams.

W. H. Congdon, Providence, R. I. Feathered Leg Bantams.

James Glascow, Mahwah, N. J. Game Bantams, Exhibition and Pet Games.

John C. Kriner, Stetlersville, Pa. Water Fowl.

Charles E. Bird, Myersdale, Pa. Turkeys.

W. M. Anderson, Saratoga Springs, N. Y. Buttercups and Lackenvelders.

M. L. Chapman, Browns Mills, N. J. Campines.

John Lowell, Chestnut Hill, Mass. Hamburgs.

Judges of Pigeons.

H. C. Longacre, Mt. Gretna, Pa. and F. S. Walton, Philadelphia, Pa. Oriental Frills.

E. M. Phelps, New Rochelle, N. Y. Jacobins and Barbs.

Martin Walker, Philadelphia, Pa. Carriers and Dragoons.

Edmund B. Ulrich, Reading, Pa. Tumblers; Archangles; Nuns and Magpies.

James Glascow, Mahwah, N. J. Fantails.

Wm. J. Standton, New York City. Turbits; Owls; Runts, Trumpeters and Helmets.

Charles Kruger, Hoboken, N. J. German Toys and Highflyers.

George Feather, Dorchester Centre, Mass. Homers; Pouters; Pigmy Pouters; Carneaux; Maltese Hens and all other varieties not herein otherwise mentioned.

One or two additional judges may be appointed, especially in the Pigeon Department. I feel sure that the names presented will have the approval of the Fancy and that our entry will be very large. The Foot and Mouth Disease has, of course, injured the earlier shows but this trouble will not bother us as it will all be over long before our doors open.

The Educational features of the above show will be enlarged this year and a daily program for lectures will be run both afternoon and evening under the auspices of the Agricultural Colleges of New York, New Jersey, Connecticut and Massachusetts, all of which will have their displays in the

Concert Hall, which is given up this year entirely to this program. I fully expect that the Hall will again be crowded as it was last year and I feel that this department of the show is doing a great deal of good. The exhibit of Ornamental Land and Water Fowl this year will be the finest we have ever had and will include a large Aviary of rare song birds, water display and a yard of ostrichs in full plumage.

In order to better accommodate and stage the exhibits in the Pigeon and Bantam departments Pet Stock has been eliminated. This will afford much needed room in the balconies. The exhibition of Cats has also been discontinued and the entire Concert Hall given up to the Agricultural Colleges for their lectures and displays. Among the Specialty Clubs that will meet with us are the following:

American Light Brahma Club.

State Meet of the Rhode Island Red Club of America.

Annual Meet of the Sussex Club of America.

Young Bird Meet of the American Jacobin Club.

Annual Meet of the Oriental Frill Club of America.

State Meet of the National S. C. White Leghorn Club.

Annual Meet of the American Carrier Club.

International Meet of the American National Salmon Faverolle Club.

The American White Plymouth Rock Club.

And many others.

The new features which were inaugurated last year will be continued, viz:

The Exhibitors' Lounging and Writing Room, Bureau of Information and Call System to enable intending purchasers to find the breeders on the floor.

A new system of posting the awards will be in vogue; that is as soon as the classes are judged pasters showing the awards will be put on the cage numbers and thereafter ribbons will be hung at the risk of exhibitors. If an exhibitor is not present at the show his ribbons will be forwarded to him in the coop with his birds.

It is the intention to deliver or mail during the show all Specialty Club awards. Breeders are certainly entitled to these awards during the show for that is the time they need and want them.

The management has added an additional $500 in gold to the cash specials. This sum will be divided by the Secretary among the various varieties which in his judgment most need the specials.

A Model Farm will this year be displayed in the restaurant and the plans now under way indicate that this will be a very attractive addition to the show. At this writing I have already been assured of the presence of many new exhibitors and as the show is held at a time when the public is not engaged in Christmas festivities I look for an increase of at least 25 per cent in the attendance—we will certainly have the largest number of people that have ever been at a poultry show in the Garden.

There are so many late hatched birds this year that a great many of the exhibitors have stated to me that they are very glad that the show comes somewhat later this year as it will enable them to exhibit specimens which otherwise they would have to carry over for a year. The point made that the dates somewhat disturb the breeding season will not work well to the advantage of those who stay away for the other fellow will get the ribbons and if a bird is of sufficient quality to win at the Garden it would certainly be poor policy to keep them out for the breeding pen for a few days and not get the award.

More money is being spent this year in advertising and a number of special features intended to attract the attention of the public are to be introduced. These I am keeping as a surprise as I do not wish them to be announced in the Press prior to the time of the show, but I believe they will attract great attention.

The United States Government will have an exhibit with us this year and possibly may show some of its poultry but in any event its moving picture reels will daily be on exhibition.

The attention of intending exhibitors is called to the fact that Class Numbers have been omitted and it will, therefore, be necessary for them to write out in full and plainly the kind of poultry or pigeons which they intend to show and to state the age and sex, viz: Whether it is cock, hen, cockerel, pullet or pen. Please urge them to be careful in making our entry form.

Entries close promptly and positively January 26th.

Owing to an increase in the clerical force I hope to be able to get on the floor more frequently than during last year's show and especially ask that all exhibitors make it a point to meet me and discuss matters which are of interest to the great American Poultry and Pigeon Fraternity.

Yours very truly,
Charles D. Cleveland,
Secretary and Superintendent.
Eatontown, N. J., December, 1914.

COMMUNICATION.

To the Poultrymen of the State of Penna.,

Dear Sirs:—

On Tuesday, January 26, 1915, at from 9 to 10 o'clock A. M., there will be a meeting of the Members of the State Poultry Society and all other men interested in, and those wishing to become members. Meeting will be in the rooms of the State Secretary of Agriculture, Capital Building, Harrisburg.

After this meeting there will be a meeting in the same room, from 10 to 11 o'clock of the Penna. Poultry Breeders Association, and all members and those interested in this Association are urged to be present.

After these two meetings, there will be a joint meeting of the two bodies to discuss points of interest to both. The time of this meeting will be announced at the separate meetings and no doubt it will be held at 1 o'clock the same day.

There will be something doing every minute of these meetings but leave your spurs and gaffs at home for the Poultry interests are bigger than any one man or set of men.

The Penna. State Poultry Society has a seat on the State Board of Agriculture, which meets also on Jan. 26th, and Poultrymen will find it interesting to take in the Board meetings.

As the Legislature meets this year, we must not forget that the Poultry Society is going to ask for a State Poultry Show Aid Bill. A bill creating a department of poultry in the Department of Agriculture and help boost an appropriation for the Poultry Department at State College. We must also look after the poultry end in the New State Fair.

The Poultrymen will also be interested in the New Dog Law that will be brought before the Legislature this year.

In a few words, we poultrymen are a very large body of men supplying one of the main needs of life. As single poultrymen we are only a mite, as combined poultrymen we are a might. The former keeps you scratching, the latter makes the other fellow scratch, and take notice.

Come, leave your axes at home and forget self.

Your servants,
Edgar A. Weimer, President,
Penna. State Poultry Society, Lebanon, Pa.
Frank McGrann, President,
Penna. Poultry Breeders Association, Lancaster, Pa.

Five Million More Motor Cars Needed for Farms

Glance at Agricultural Market Shows That Possibilities Are Hardly Scratched

Nearly one and a half million automobiles have been sold in the United States since 1902 when the business may be said really to have begun.

The number of these machines that have gone to the scrap heap is as yet negligible for commercial reckoning. The oldest is only twelve or thirteen years old. You see the quaint old timers in service every day.

Next year, according to the forecast of the trade, nearly a half million more cars will be sold. These facts cause many to wonder where these hundreds of thousands of cars will go next year—and the years after that. They figure that there is now one automobile to each seventy or eighty people in the country. How many possible purchasers remain to be supplied?

Jasper, the well known financial authority and writer for Leslie's Weekly partly indicated the answer when he says, "Half of next year's output will be sold to farmers more largely for utility than for pleasure." The fact is, when the farm market is thoughtfully considered, it is found to be the dominant factor in the future of the automobile industry. And Jasper's words "more largely for purposes of utility than for pleasure," furnish the reason.

Without taking into account the scrapping of old machines, which must be replaced with new ones, it may be said that stupendous as the business is, the possibilities have not been much more than "scratched."

Not quite 50 per cent of the automobiles in use now are owned by farmers. But there are in the United States, acording to the census of 1910, six million three hundred and sixty-one thousand, five hundred and two farms, with a total value of forty billion nine hundred and ninety-one million, four hundred and forty-nine thousand, and ninety dollars—an average value per farm of six thousand, four hundred and forty-four dollars.

A supply averaging one automobile to a farm is a long way in the future—but the demand is not inconceivable. Some day, without doubt, it will be approximated—and when it comes it will represent a degree of progress and efficiency as far ahead of the present as the supply of that day will be ahead of the present supply.

Thus far the number of automobiles owned by farmers is only about 10 per cent of the total number of farms. The manufacturers would have to produce over five million more cars to fill the farm market alone.

The coming of the automobile has made remarkable changes in farm conditions. It is carrying the farmer far and wide over the countryside and bringing him into close touch with all the great improvements in agriculture.

Today it is no uncommon thing in any of the middle western states to see anywhere from 50 to 300 automobiles grouped about a field where a plowing contest is going on, or standing about the stable where there is a sale of fine cattle. These automobiles come from distances of 10, 20 and even 30 miles. They bring the farmer to these centers of interest quickly and without a great waste of time.

The automobile on the farm is a paying investment in many ways. On many farms the car does service both as a pleasure car and a truck. By removing the body the car is converted into a truck on which farm products are quickly taken to market at little expense.

In the old days if a member of the family, or a valuable horse fell ill or was hurt, or a machine broke down in the midst of harvesting, the farmer had no choice but to take the consequences. He would drive off to town for help, but it was a long, slow drive over bad roads and help almost always arrived late. The car gives him the quick service he needs.

When it comes to the boys on the farm, no one can doubt the influence of the automobile in making the farm attractive. Both the boys and girls of the farm drive the car and take care of it, and you may be sure that the young men or women on the farm where there is an automobile see to it that the car is kept in good shape. There is a marked decrease in the desire on the part of the young to get away from the farm, and the automobile is one of the most important influences to bring about this change.

The automobile has promoted the good roads movement all through America. This is decreasing the cost of transportating agricultural products to market. And so important an item is this that it could almost be said that the improvements in roads alone would more than pay a big interest on the amount the farmer has invested in automobiles.

Even now, road improvements have made it possible in many places to use the car every month of the year.

These are factors of the growing business of the local automobile dealer—for on the local dealer the farmer depends for his cars. It accounts for the fact that from now right on through the winter months the factories will be busy turning out cars to meet the spring demand. The high point of production is reached about the middle of February. The local dealer buys cars in advance and stores them until the opening of the spring season so he can make prompt deliv-

Oat Sprouter $2.

For $2.00 you can build the best oat-sprouter on earth; easiest to operate. A boy with saw and hammer can make one in an evening. Plans, 25c.

eries when the rush comes.

Recognition by the banks of the importance of this phase of the business is evidenced in the growing practice of local bankers to make loans to the dealer on manufactured cars which he orders and receives during the winter months. The local dealers place the cars in warehouses giving warehouse receipts and certificates of insurance as security for the loans. Bankers who make this class of loans say they are among the most profitable in the market.

President William Livingstone of the Dime Savings Bank, Detroit, bespeaks for automobile dealers the liberal support of the banks—especailly in the small towns where the dealers do a large part of their business with farmers. He said in his address before the American Bankers Association:

"As the greatest number of cars are sold during seven months of the year, makers and dealers have been borrowers, and it is a matter of record and congratulation that in fostering this growing industry bankers of this country have played a most important part with practically no loss. Discerning bankers in the past few years especially have appreciated the stability of the industry and the standing of the men in charge, and have co-operated to a marked degree, in establishing the business on its present high plane."

AMERICAN LIGHT BRAHMA CLUB N. Y. STATE MEET TO BE HELD AT "GARDEN".

As previously announced the New York State Meeting of the American Light Brahma Club was to have been held at Schenectady. This show has been "called off" and as it is too late to arrange with any other show, the Club has decided to hold the State Meeting in connection with its National Meet at Madison Square Garden, Feb. 12-18, 1915. A beautiful State cup and a set of ribbons, besides cash specials will be competed for by New York State members only. This double meeting should materially increase the entry at the "Garden" and the largest display of Light Brahmas in history is confidently looked for.

A Try at Henology

By Felix J. Koch, Cincinnati, O.

Robert came through the gap in the back fence and into the garden, where Viola and Esther had their dolls seated in several rows, for 'school-time,' jubilant!

"Say," he greeted, as was his wont, "did you know next Sunday's to be the picnic,—an' we're all going out in the woods an' take lunch an' then play games an' we can stay 'till dark, Mother says!"

"Really, Robert?"

The girls were too delighted to credit it, without at least a query. Once a year the Bloom's went to a great fraternal picnic and Robert took his two playmates along as his guests. There were swings and hammocks; there was lemonade and candy and one played no end of games. The picnic, therefor, was an event, long to be looked forward to, and, it's date being rather a movable feast, the announcement had all the delightful surprise to it that the visit of the bill-poster with circus showbills would have!

At once there arose animate discussions of picnics past and forthcoming. "Mother's goin' boil two dozen eggs," Robert imparted, "an' she was thinkin', if she had time, she might dye 'em, like Easter eggs. Wouldn't that look pretty, an' be a surprise,—to pass around Easter eggs long past Easter."

The children's raptures increased at the very thought of it. Just over the garden fence Mr. Roosa's chickens crowed, little dreaming the fate in store for the eggs soon to be laid. Roosa had started chicken-culture for fun, then, as neighbors found that fresh-laid eggs tasted so much better than the cold storage product your grocer kept,—they began to buy, and splitting middle men's profits with old man Roosa, they saved money, and Roosa made money as well.

The children felt they had a part owner-ship in those chickens. Table crumbs and the like, Viola and Esther would drop over the fence into the chicken-yard. When Williams cut the lawn, they took arms-ful of the soft cut grass and gave it to the hens. Often they would throw this, that or the other to the chickens; and the chickens came to know them and run up, for tit-bits whenever they drew near the fence. In return for which, when they played Keep House, Mrs. Roosa would call them to come get two or three nice eggs to boil, and some-times she sent over an omelette.

"Mother says she told Mr Roosa she'd buy all the eggs the hens lay from now 'till Saturday,—caues she wants the freshest she can get for the picnic," Robert again ventured. "Maybe you can come over Saturday afternoon and help to dye 'em".

The children had strolled up to watch the chickens,—harbingers of this good fortune. On the earth, in the chicken-yard, a splash of white-wash lay, from the painting, and a hen pecked at this, perhaps in pursuit of some newly vanished worm below. To the children it seemed as if the hen were eating the color.

"Oh Robert," Esther exclaimed suddenly, jumping up and down as she always did, when thoroughly excited." —"I got an idea! Let's not give your mother all the trouble and the dirt of dyeing eggs.—I got three pennies, and Viola you got a nickel Papa gave you at breakfast.—You got two cents Robert! He had:—Robert was a spoiled child, and he had a whole quarter.

They turned over their savings to Robert, who, being the man, would carry out the plan, breaking his quarter, for change.

It wasn't long before the children had completed their mission and were back at the fence. The chickens cluck-

Long's Orpingtons BUFF--BLACK--WHITE

In my fifteen years experience with fancy poultry, I have found that large ads do not always mean high quality, and seldom the best value for the money.—I have cocks at $5.00 and upward, cockerels at $2.00 and upward and females at $1.50 and upward, in all varieties, that will compare favorably with the average stock shipped at double the price. Let me furnish you with one or more birds, on approval, to help you win your show and strengthen your breeding lines.

E. M. Long, Box P. F. Osceola, Ind.

ed and clattered greedily over the soft bread the children threw them, and the big cockerel made them laugh again and again as he chased the smaller cocks from his way. They ate and ate and ate,—like so many school boys, Esther whispered,—though Robert didn't like the allusion one bit.

Eagerly the three awaited the result of their experiment. Each had sworn the others to secrecy, that the surprise might be the greater. Again and again, though, one or another of them would run off to the chicken-yard, and look wonderingly at the hen-house, wishing wildly they might go inside its forbidden precincts and see what the hens were about.

Next morning, Father went back into the garden to look at his roses, preparatory to winter transplanting. He saw his back-door neighbor standing sadly out in the chicken-yard, two sick hens in his hands.

"I can't understand it", he told him. "Some one must have given them something by way of poison. I don't know who to suspect, unless it was the cook next door, who don't seem to like the presence of chickens. But then, I don't think she'd do it. See," he said, "all the chickens are dieing".

Viola had run out to take some cannas to school for teacher, and bunch in hand came to Father's side just as Roosa pronounced the words.

It was enough. They had succeeded.

"Goodbye, Papa", she called, and off she ran to tell Robert and Esther that the hens were DYEING.

What would the eggs be like? Red, or blue, or green, or yellow. Robert held staunchly they'd be just one color, this whatever the shade would be if you mixed the six shades in one vessel. Esther thought it would be whatever color the hen liked best, while Viola believed, you'd have a mottling of all colors, a sort of plaid, as it were.

That noon, when home from school, Mother began to tell them:—

.."Poor Mr. Roosa, all his hens are dieing!"

Esther was so excited, she dropped her fork. Her flashing eyes and radiant face told mother how glad she was.

"What are you so happy about, Esther? I think it's a shame,—Mr. Roosa was so fond of them! And think of the money they cost".

"Why is it a shame mama. Colored eggs are as good as others, even better".

"Colored eggs, what do you mean?"

They explained, they thought she meant the hens were dyeing! What put that idea into their heads? Mother's suspicions were aroused, and secret or no secret, she wormed it out of them.

They had gone to the drg store and bought the cheapest dyes they could get,—twenty cents worth. Then they'd bought some stale bread, as Roosa's often did; wet it in the hen's water pan, and colored it with the dyes. The chickens gobbled it all up, and—it being dusk when Roosa came there, he hadn't noticed what stains there might be.

Mrs. Hinsch for the moment was non-plussed. The children had meant it all in the kindest way, they cried bitterly when they heard that the hens were dead, and they cried at their spoiled surprise.

She couldn't find it in her heart to punish them. Still Mr. Roosa would know, sooner or later, so she had better have him learn direct.

She got Robert's mother on the telephone and told her the story. The children were'nt near and the two mothers laughed, then planned definite action. Why not have the children club together, share and share alike, and buy the same number of hens, then drop them into the yard and say nothing? It was a splendid idea, if an expensive one, and, slightly modified, Mrs. Hinsch put it through.

That same afternoon the express left four cages of poultry in the Roosa back-yard, pending the cleaning of the chicken-yards to receive them. Then three tear-stained, very humble little neighbor children went up Roosa's steps, rang the bell and told Mr. Roosa the sorrowful story of how they wanted the hens to DYE.

They burst into tears when he told them the hens were dead, but when he said that the new ones were much better fowl, they looked happier, and when he let them help him put the yard all to rights and said he'd forgiven them long ago, they believed he was the nicest man in the world.

Never again would they try to make the hens dye, they assured him, though down in his heart Robert still harboured the hope that some day when he was big and rich he would buy a hen and other dyes and still prove his theory correct!

MICHELL SIXTH ANNUAL POULTRY SHOW.

Entry Blanks and Premium Lists are now ready for the Michell Sixth Annual Poultry Show, January 12th, 13th and 14th, 1915.

The Michell Company have gone to enormous expense to make this a success, a large list of special prizes have been provided for, over fifty silver cups, 25 bronze medals, feeders, fountains, feed and other poultry requirements will be distributed.

This show will be held at 518 Market Street, and the Company has limited the entries to 500 cages, owing to the lack of space. The official closing of entries is January 4th, but from present indications they will close before that date. It is, therefore, suggested that exhibitors send their entry blanks as early as possible to overcome the possibility of being disappointed.

This show has always been noted for its class and rivals any show in the State, barring Madison Square, and the management are making every effort to make the coming show parexcellence.

The official attendance last year for the three days was 11,000 and the poultrymen assert it was one of the best business shows in the East.

The Secretary is—T. Austin Eadon, care of Michell's Seed House, 518 Market St., Phila., Pa. Mail requests for blanks at once. Don't forget that the entries are limited.

A NEW BREED.

We are pleased to note that J. N. Hazlett, the well known poultryman of Marianna, Pa., has come to the front with White Laced Black Cornish fowls. They are very beautiful, indeed, and Mr. Hazlett advises us that he has been working a number of years in perfecting them. He first exhibited them at the Great Hagerstown Show and they attracted marked attention. They will doubtless be seen in many of the big shows during the season.

The J. S. J. Automatic & Trap Nest.

Automatically separates layers from non-layers without attention. The most practical and only complete hen's nest on the market at any price. Write for free booklet.

GRAND CENTRAL PALACE

The exhibition is over, but its memory will linger in the minds of hundreds of exhibitors and thousands of visitors for years to come. It was a triumph extraordinary, and the results were achieved through application of heart and mind and hand to one great principle by a real leader of men, sustained by an organization made up of men of "fiber and character" among whom the thought of selfishness found no place whatever. It was the one great show, so far this season, in which the writer personally felt that he had a "personal interest" in its welfare and success. It is the only great show, or poultry exhibition, that we have ever attended at which we ever experienced a large degree of real freedom and where we felt that we would not be taken as a "thief in the night" if we were discovered conversing with some prospective advertiser upon the floor or within the isles of the exhibition hall. The Palace Show was a monument, to the pains-taking effort of Mr. Howell and his co-laborers, that will live years after they are gone, in the memories of those who were present, even though this was to be the last show ever held under the auspices of the Empire Poultry Association. One is not only impressed with the fact that Mr. Howell is "every inch a gentleman", but somehow, the impression seems to prevail with everyone associated with him, either as members ofthe Empire Poultry Association, judges, or exhibitors that they were, of necessity, gentlemen. As a natural consequence, a spirit of good ...wship and **"home like feeling"** added to one's enjoyment while in attendance at the Palace Show and intensified his or her interests in every exhibit staged, and impressed every exhibitor and everyone else who had an interest in the exhibition, with the conviction that they were an integral part of this great organization and were, to some degree at least, essential to its well being and success.

Model Farms Display.

The Model Farms display on the second floor, which was staged by the certified Farms Company, was constantly thronged with interested visitors and the lessons they learned there, both from a practical and scientific standpoint will, without question, result in both financial and pleasurable profit. Everything necessary to a well organized and successfully operated farm was in evidence at this display. Nothing was lacking to insure success but the mind and the hand necessary to guide the enterprise to an ideal destiny. Everything needed on a poultry farm, from a brooder to a poultry house, from an egg to a well developed bird, could be ordered on the second floor. Messrs. Punderford and Fisk, together with their associates, who had charge of this exhibit, are certainly to be congratulated on their success and we know their efforts will be appreciated by everyone who enjoyed the pleasure of visiting the second floor at the Palace Show. There are many things that we would like to say concerning this great poultry exhibition, as well as concerning the men who made it possible, but time forbids and in conclusion, we desire to state that a part of the awards of the Palace Show will be found in another portion of this month's issue of the Fancier.

PHILADELPHIA CAME BACK IN FORCE

The Philadelphia Show, held December 15th, 16th, 17th, 18th and 19th was, in the estimation of many of our best poultrymen who attended this years exhibition, the best and highest class poultry show Philadelphia has staged in many a year. The 1st Regiment Armory, which is conceded to be one of the best buildings in the state for exhibition purposes, was literally filled with birds from one end to the other; in fact, the entries were so great that it was necessary to double-tier the entire poultry department. The officers of the Philadelphia Association deserve great credit for their achievement. There were between 3,000 and 4,000 entries and practically every class was well filled. We understand that it is the purpose of the Philadelphia Poultry Association to put on a better show next year than the one they staged this, but if they do, either in quality or numbers, the boys will certainly have to get busy earlier in the year than they did this year. We doubt if any show in this country could boast of better quality or of being represented from among a wider range of breeders than the Philadelphia Poultry Exhibition. Many good birds failed to secure a place but the judging proved very satisfactory to a great majority of the exhibitors. The fact is, we cannot see how it could have been otherwise as Philadelphia always secures the best judges to be had in the country. We wish the officers and members of the Philadelphia Poultry Association every possible success in the future and offer our assistance along every line in which we can be of use or value in boosting their next year's exhibit.

THE 1915 STANDARD OF PERFECTION

Some time ago we were informed that the 1915 edition of the Standard of Perfection would be ready for mailing not later than January 1st, but up to the present time, although we have sent in many orders to head-quarters for the new Standard, we have not as yet seen a copy of this much talked of and much looked for edition of the "poultrymen's guide book". It is certainly pleasing to note, however, that we will, without question, receive the Standard for 1915 sometime during the month of January, and that regardless of the fact that there are at least twenty-four pages more in the 1915 edition than there were in the 1910 edition, the publishing commit-

tee have saved at least $2,000 on the cost of printing and publishing the 1915 Standard. We understand that the quality of paper will be better throughout and that illustrations will prove a decided relief to the poultrymen of the country when compared with the "misfit 1910 edition" is a for gone conclusion.

COMMUNICATION.

Firthcliffe, New York,
Dec., 1914, 9th.

Poultry Fancier.
Gentlemen:

After reading through Mr. E. M. Long's letter. Headed "poultry photographs and halftones," I would like to pass my opinion and a few remarks in behalf of a large many breeders of White Birds. I am a Breeder of White Faverolles and firstly, I want to commence at, is perfect pictures and specimens of Standard breeds. I am very much in favor of his article on this point. It is very hard to get a bird down so fine as the standard of perfection photos call for, in fact it cannot be done and I do believe a Bird of various breeds, various sexes and year should be presented and a life like photo taken and approved, not to use the most skillful artist's hand on a made up specimen of a Bird. The natural production on a photo looks grand and much better than that on an artist's leaf. Yet on the other hand Mr. Long states birds should be shown not washed. I firmly disagree. How in earth is a bird going to look in a show pen, a White or Buff or likewise color, after scratching through ashes and several other scratching places and ingredients. Why they would look like nothing and the cry would be Wash the Birds. Remember washing does not bleach, certainly not. I am not in favor of bleaching, but I am of washing and I am sure the majority of good leading fanciers are in favor also, then again Mr. Long states odd feathers not colored, to the plumage otherwise wrong feathers, etc. He states these shouldn't be pulled out, well how many honest poultrymen are there. Supposing you had a splendid bird fit every way for the show pen in a leading show. It had a miscolored feather, you would be very honest if you would hold the bird back and lose the fine opportunity, otherwise you wouldn't exhibit the bird with a wrong feather, certainly not, you would pull it out. The same applies to side sprigs. How many of our leading breeders will kill, sell cheap or hold back a perfect or near perfect bird if he has a small sprig. (None.) They would very quietly take it off and tell the people they wouldn't ever think of it, of course it's the game. I never done it but can you believe me. You can't take any more than the breeder's word for it and you can't prove it unless you have circumstantial evidence. I hope that these few notes will serve as on opinion of Mr. Long's article in Dec. issue.

Yours truly,
Ed. Higginson,
Firthcliffe, N. Y.

NOTICE.

December 12th, 1914.

Gentlemen:—

The International Rose Comb Black Minorca Club met with the Tri-State Poultry Assn. at Toledo, Ohio the first week in December and elected the following Officers:

H. A. Keister, President, Bangor, Mich.

Mrs. Cora A. Shoemaker, V. President, Granville Summit, Pa.

E. M. Campbell, Secy.-Treas., Columbus, O.

Mrs. Chas. G. Trask, Independence, Iowa.

Ross Swartout, Camesville, Ontario.

A. M. Moody, Boston, Mass.

Phillip J. Minch, Cleveland, Ohio.

They have landed the illustrating of R. C. Black Minorcas which will be in the 1915 standard.

All members report the Minorca business booming, and the new officers aim to make this a banner year.

Very truly yours,
E. M. Campbell, Secy-Treas.
571 N. Fourth St., Columbus, O.

- - REGAL - -
- - WHITE WYANDOTTE BOOK - -

I have just received from the printers another edition of my book on White Wyandottes. It contains 60 pages and is without doubt the most complete book that has even been published dealing wholly with the White Wyandottes. It is full of illustrations from life and its pages deal with a variety of subjects, including Chapters on Origin, Description, Feeding, Care of Breeding Stock, Fertility, Color or Characteristics, Washing and Fitting for Exhibition, Poultry Diseases, etc.

My object in issuing this book is to bring to the attention of every White Wyandotte breeder, the Regal Strain, America's Finest White Wyandotte. The magnificent winnings of this strain at the leading shows have never been equalled. New York State Fair, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913, 1914,—47 blue ribbons out of a possible 54.

In 1913 my birds established a new record for the Boston Show in White Wyandottes, by winning Best Display with a score of seventy-two points which was twelve more than my twenty-one competitors combined. My customers all over the country have established records just as good.

Would you like such a record? Then breed the Regal Strain.

3000---Cocks, Hens, Cockerels and Pullets for Sale---3000

SPECIAL—200 exhibition cockerels and 400 beautiful pullets ready now to win the blue ribbon for you. 100 well matured cockerels from my heavy laying Dorcas line, $10, $15, $20 and $25 each Dorcas pullets, $3, $4 and $5 each. Stay white utility cockerels, $3 and $5 each.

Send one dime for the REGAL WHITE WYANDOTTE BOOK. The information it contains will be worth dollars to you.

FREE: My catalogue and mating list is free if you will send me your name.

John S. Martin, Box D, Port Dover, Canada

CHANGE IN N. Y. STATE MEET OF AMERICAN LIGHT BRAHMA CLUB.

As the Schenectady Show has been called off and it is too late to make arrangements to hold the New York State meeting of the American Light Brahma Club with any other show, the Club has decided to hold the meet in connection with the National Meeting at Madison Square Garden, February 15-20, 1914. A beautiful Championship State Cup, besides an extra set of Club Ribbons and cash specials will be offered, and open to competition only, to members of the State. This combined meeting should increase the entry at the "Garden" quite materially; making an even larger display of Light Brahmas than were exhibited at the record breaker at Boston last winter. It is expected that next season's State Meeting will be held at Buffalo. BOOST the Garden show now—send your best Brahma—if it's only one.

CYPHERS COMPANY'S NEW YEAR BOOK FOR 1915 NOW BEING MAILED FREE.

Many of our readers will be glad to learn that the 1915 edition of the Annual Catalogue and Poultry Guide of the Cyphers Incubator Company, Buffalo, N. Y., has been published and that a free copy will be mailed, postage paid and without obligation, to any reader of this journal who will write to the Cyphers Company for it, at the same time mentioning the fact that you saw their announcement in these pages.

An extra valuable feature of this 1915 Catalogue and Guide is the special attention it gives to "war time conditions and opportunities" in keeping poultry and producing eggs in the United States and Canada during the tremendous War of the Nations in the old world. Here are the titles and sub-titles of two chapters that are devoted to this subject, one treating of the keeping of small flocks in-door yards, or on city lots, the other pointing out how the most money can be made with domestic fowls on the average farm:

CHAPTER I.

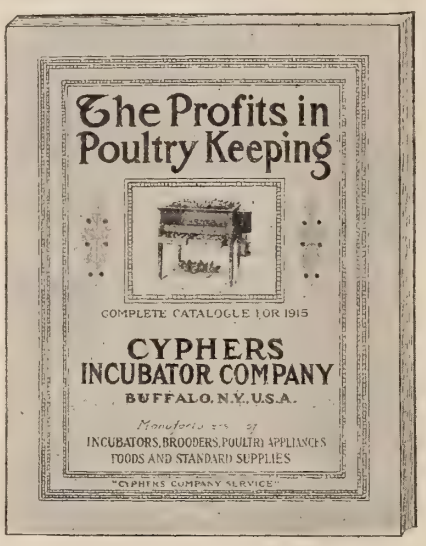
Profits in Small Flock Poultry Keeping.

Possibilities of the Small Poultry Flock. How to Keep Fowls without Interfering with Regular Occupation. Kind of Fowls to Keep and How to Select the Equipment. What Lines to Take up and How to Market Poultry Products.

CHAPTER II.

Profit in Poultry Keeping on Farms.

The Farm Flock a Money-Maker. Undeveloped Possibilities for Profit in Farm Poultry. How Labor may be Reduced and Profits Increased. Numerous Lines of Production that May be Followed. Ducks, Geese and Turkeys for Profit.



The "Annual Open Letter" by Grant M. Curtis, president of Cyphers Incubator Company, has come to be a keynote to profitable poultry and egg production, at least in the case of thousands of Cyphers Company customers and this year Mr. Curtis has "specially adapted his facts and recommendations to present war-time conditions and the existing opportunities for poultry keepers in the United States"—so we are informed in a recent letter from the secretary of Cyphers Incubator Company.

"The Profits In Poultry Keeping" is the title of the 1915 Cyphers Company Catalogue and Guide. It consists of 200 pages, 7½x10 inches in size, and is profusely illustrated. It tells all about the company's Free Personal Letter Service", about the Cyphers Company's "Service Bulletins", free to customers, about the two new styles of popular-priced incubators placed on the market by the Cyphers Company this year and fully describes the nearly one hundred other practical articles of standard quality manufactured by this company for the use of successful poultry keepers on either a large or a small scale.

For your copy of this 200-page free book address CYPHERS INCUBATOR COMPANY at its place of business neaest you, as follows: Buffalo, N. Y.; 41 Barclay St., New York City, N. Y.; 12-14 Canal St., Boston, Mass.; 329-331 Plymouth Court, Chicago, Ill.; 317-319 Southwest Blvd., Kansas City, Mo.; 2127-2131 Broadway, Oakland, Cal.; 316-318 N. Preston St., Dallas, Texas; 121-123 Finsbury Pavement, London, England.

NOW THREE STYLES of CYPHERS INCUBATORS

FOR THE SEASON OF 1915 we offer the poultry public of the United States and Canada **three patterns or styles** of high-class, **guaranteed hatching machines,** as illustrated and briefly described herewith. Please note closely the names, sizes and prices. These three styles of incubators, running through **Eight Different Sizes** and ranging in price from $10.00 to $38 are meant to meet the needs of all persons who are to be in the market this winter and next spring for **a satisfactory device of this kind.**

130 Egg Superior Hot-Water Incubator. Price, Complete, $14.00.

SUPERIOR HOT-WATER INCUBATORS

Exactly what the name says. Heated by hot-water, and are "superior" ***in every detail.*** The water boiler and tank (tubular) are of heavy-weight copper. Lamp has seamless bowl; burner is best on market. Incubator case ***is of wood,*** attractively finished in golden brown, with brass trimmings (hinges, buttons, etc.) and has double walls with air space insulation. Are equipped with Standard Cyphers zinc and steel toggle-joint thermostat and knife-edge regulator. Have ***forced water circulation*** and are automatic in ventilation. Roomy chick nurseries. Are built in two sizes: 65 eggs, price complete, $10.00; 130 eggs, price complete $14.00. ***Fully guaranteed.***

250 Egg Columbia Hot-Air Incubator. Price, Complete, $19.00.

COLUMBIA HOT-AIR INCUBATORS

Popular price, popular-size, guaranteed hot-air hatchers. Wooden cases, attractively finished in dark green, with brass trimmings and double walls. Seamless-bottom lamp bowls, best quality brass burners, zinc and steel Standard Cyphers toggle-joint thermostat and ***same regulating equipment as used on highest priced machines.*** Fume-proof, forced draft heater, asbestos covered and metal banded. Automatic in ventilation and embodies diffusive principle. Roomy chick nursery under egg trays. Made in two sizes: 140 eggs, price complete, $15.00; 250 eggs, price complete, $19.00. ***Fully guaranteed.***

STANDARD CYPHERS INCUBATORS

These are machines that for ***fifteen years*** and more have been recognized as the "standard hatchers of the world." Tens upon tens of thousands of them have been sold and are in ***successful use in every civilized country on the globe.*** They are the last word to date in incubator building, not a penny being spared anywhere in their construction to make sure of their doing satisfactory work ***in all climes,*** under ***widely different conditions,*** in the hands of all sorts of people. Are built in four popular sizes and at prices as follows: 70 eggs, price complete, $15.00; 140 eggs, price complete, $22.00; 244 eggs, price complete, $32.00; 390-400 eggs, price complete, $38. ***Satisfaction or your money back.***

All prices in this advertisement are for territory east of the Rocky Mountains, north of Texas, and south of the Canadian line. In high-freight territory slightly higher prices have to be charged, but as a rule the difference is small.

390-400 Egg Standard Cyphers Incubator. Price, Complete, $38.00.

FREE CATALOGUE: WRITE TODAY for special circulars about our SUPERIOR HOT-WATER and COLUMBIA HOT-AIR INCUBATORS, which will be sent free on request to any address, and also have your name listed to receive a FIRST EDITION COPY of our 200-page Complete Catalogue for 1915, entitled ***"The Profits in Poultry Keeping,"*** that will be ready for mailing by January 1, 1915. Contains valuable down-to-the-minute information on how to make the most money with poultry in small or large flocks. Address our place of business nearest you and ask for the name of nearby sales agency.

KAUFMANN & WINDHEIM'S

Rose Comb Rhode Island Reds

ARE ON THE FIRING LINE AGAIN

After resting for two years we directed our "artillery" at two of the greatest shows held in America this year and nearly "anniliated" the competition.

Exhibiting at Buffalo, N. Y., Thanksgiving week and at Grand Central Palace, N. Y. City the week following, our birds won seven firsts, five seconds, many minor prizes, special for best display at both shows and silver cup for best breeding pen at Buffalo. No exhibitor against us won more than one first and we won more firsts than all other exhibitors combined, which sounds natural to us.

Our record of four firsts at the Palace, against the best men in the game stands as a record unequalled.

First hen and first and second cockerels at both shows keeps up our wonderful record. We have not been beaten on hen or cockerel for years and years.

ORIGINATORS OF THE GREAT "BILL TAFT STRAIN".

EGG FOOD FOR PULLETS

By Archie E. Vandervort, Sidney Centre, N. Y.

What shall I give my pullets to start them laying? is a question many poultry raisers are asking. The idea is prevalent that pullets should have some condiment, stimulant or special food. In some cases a stimulant is beneficial and there are condimental foods that will stimulate the egg producing organ into activity; but as a general thing a well-balanced ration is all that is necessary. Condiments are beneficial; they are as necessary for hens as for human beings. A mash of bran and ground grain, without salt or other condiment would be insipid and tasteless. When on free range the hen can easily supply all the condiments she needs, with the exception of salt, but when she is confined we must supply them. The condiments given poultry are more for the purpose of increasing the appetizing quality of the food than as a stimulant or tonic, and are usually restricted to salt, mustard, pepper and ginger. Onions, winter radishes, turnips and beets fed in the mash have the same beneficial effect as pepper and ginger; they give the mash a pungent taste and the fowls relish it. Pepper, ginger and mustard when given in sufficient quantities or doses are stimulants.

There are many condition powders, egg foods and other stimulants on the market that are used to increase egg-production, any direct nutritive value these prepared feeding stuffs may have is due to the common feeding stuffs they contain, and quantities fed are too insignificant to cause any considerable gain in production. Their direct value is due to some economy of the other feeds with which they are fed. which increase digestion. The increased appetite that often follows the use of a condimental food or poultry powder might be secured by any change of diet, especially by the proper use of salt. Mild laxative effects may be obtained with green food and proper use of mashes in the diet.

Venetian red is an excellent tonic and also a corrector of bowel trouble. Given in a mash or drinking water, it will often start the pullets laying when they seem to be holding back for no apparent cause. Venetian red-iron oxide is perfectly harmless unless given in doses so large as to cause constipation. It supplies one of the essential mineral constituents of the blood, iron. Food iron is absolutely necessary and is often lacking in the food we supply our fowls when in confinement.

The use of cantharides and black powder has been recommended in several articles appearing in poultry and agricultural papers. Cantharides is a powerful drug made from the dried and ground bodies of the cantharis, a green beetle with longated body and nauseous odor. It is a stimulant used principally for blistering, but sometimes is given internally for various diseases, principally amenorhea—suppression of ovulation. It has long been used and held in esteem by cockers in fitting game birds for the pit, but has been lately recommended as a condiment for poultry, and especially to force hens to lay.

Since these articles have been published many on the lookout for some wonderful remedy to make hens lay have used this combination, and in some cases the result has been disastrous, due no doubt to lack of care. One breeder reports that when he commenced feeding cantharides and gunpowder he was getting only four eggs a day from fifty hens, but in a short time the yield increased to forty, then the fowls began to show signs of derangement and all sorts of troubles followed, many of the hens dying. The line of demarcation between stimulation and irritation is very narrow, and those who use powerful drugs should do so with caution.

I myself have never used any drugs, securing the best results, on the whole, by using only common condiments such as salt and occasionally a dash of cayenne pepper to give an insipid mash a taste. If the fowls are kept healthy by having clean quarters, fresh air, sunshine, pure water, and good, wholesome food, they will need no tonic to induce them to lay if they are of a laying strain; if they are not, it is better to discard them than to force egg production.

TALKING POULTRY YARDS

If you want winter layers, you must get winter hatched pullets. We will deliver 3 month old pullets at 50c each; 4 month old, 60c each, in May and June. Bred for winter eggs and lay them. Reserve them now, only a limited number to be sold. Barred Rock, White Rock, R. I. Red, White Leghorn and Regal Wyandottes.

Talking Poultry Yards, Hainesport, N. J.

SAVE THE BABY CHICKS

Most diseases that affect chicks have their origin in the digestive tract—Catarrh of the Crop, all Bowel Trouble and White Diarrhoea.

HEN CURA CAPULETS are specific for all their troubles. They act like magic. A trial will convince you. Put up in three sizes—25c, 50c and $1.00 per box, postpaid.

Send for free sample.

A FEW HOURS WITH MEN WHO RAISE CHICKENS

By F. D. SUTTON

W. F. BAST.

At the Palace Show, W. F. Bast, of Phillipsburg, N. J., surprised everyone by winning the best display in the Houdan class with 160 birds entered. This was the largest collection of Houdans ever assembled in one show, so we were told by prominent Houdan breeders. Mr. Bast won four club cups at the Palace and three cups at the Asbury Park, N. J. Show. He has been breeding Houdans for ten years and has furnished many winners for the best shows in the country. We do not hesitate in recommending Mr. Bast and his birds to all our readers.

WILBURTHA FARMS.

On another page in this issue of the Fancier, our readers will find the advertisement of the Wilburtha Farms, Trenton Junction, N. J., Charles J. Fisk, owner and manager. Mr. Fisk's ad contains many important announcements which will prove of unusual interest to our readers. During the recent Chicago Show, the following prizes were won by birds bred and raised on the Wilburtha Farms; namely, White Leghorns; 1st and 4th cock, 2nd cockerel, 2nd and 3rd hen, 1st and 4th pullet, 1st and 3rd young pen, 1st old pen. Buff Leghorns; 3rd cock, 2nd pullet, 5th cockerel, 1st old pen and 3rd young pen. Columbian Rocks; 3rd and 4th cocks, 1st and 3rd cockerels, 2nd and 4th hens, 2nd and 4th pullets, 1st old pen, 1st young pen. Columbian Wyandottes; 1st and 4th cock, 2nd and 5th cockerels, 1st hen, 1st pullet, 1st young pen, and 1st old pen. By looking over these winnings, one will discover that Mr. Fisk's birds lost only one 1st pen in the four varieties in which his birds competed. This is one of the most remarkable winnings we have ever known an Eastern breeder to make at the great Chicago Show and we desire to congratulate Mr. Fisk on this splendid victory.

J. H. CROSSLEY & SON.

At the last Philadelphia Show, J. H. Crossley & Son, of Magnolia, N. J., breeders of S. C. R. I. Reds, broke into the winnings as follows: 2nd cockerel, 2nd pullet, 3rd cock, 3rd and 4th pens. Mr. Crossley made but seven entries and won a ribbon on five of the same. The Reds were one of the hottest classes at the Philadelphia Show and any one securing a prize there, has reasons to feel proud of the achievements. Mr. Crossley is offering breeding males from his prize winning strain at from $3 to $10, exhibition males at from $10 upward, breeding females at from $2.50 to $8 and exhibition females at from $8 upward. His prices on eggs and baby chicks are very reasonable considering the quality of birds Mr. Crossley breeds. In writing Mr. Crossley, for either stock or eggs, kindly mention the Poultry Fancier, please.

C. W. BINNS.

One of New York state's most popular and widely known S. C. White Orpington breeders is Mr. C. W. Binns, of East Syracuse. Mr. Binns has succeeded in raising some of the finest specimens of White Orpingtons ever produced in the Empire State. His birds are not only great in size, practically ideal in symmetry, but they are the whitest White Orpingtons, from what good judges tell the writer, that they have seen in many a day. Mr. Binns claims that his method of feeding is sure to produce white birds, even in the White Orpington class. Mr. Binns now has a few exceptionally fine birds for sale and he guarantees entire satisfaction with every sale made. We conscientiously say that we believe it would be to anyone's interest who desires high-class White Orpingtons to write Mr. Binns for prices before ordering elsewhere.

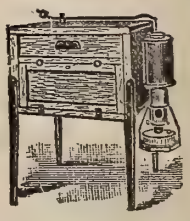
S. R. TAYLOR.

Another unusually successful White Orpington breeder, who is advertising in the columns of the Fancier, is Mr. S. R. Taylor, of Sicklesville, N. J., R. D. No. 2. Mr. Taylor advises us that he is ready to fill a limited number of orders for young cockerels of unusual merit. Mr. Taylor was formerly located at Dushore, Pa., but recently moved to his new farm at Sicklesville, N. J., where he has one of the best locations for a poultry farm in that state. Mr. Taylor guarantees satisfaction to every customer and we fell positive that he will not fail in fulfilling his guarantee.

SPLENDID TALES OF SUCCESS

can be written around the

BUFFALO INCUBATOR



Designed by Chas. A. Cyphers

the pioneer manufacturer of Artificail Hatchers. The Buffalo is the Standard of Standards. It don't change every year, because it was MADE RIGHT to start with. It not only was made right, but it was PRICED RIGHT. You get more intrinsic value for your money when you buy a BUFFALO, than you can get in any other make of incubator.

These facts are generally recognized by both competitors and poultrymen alike. Acknowledged by competitors, in their efforts to imitate, and by the great world of poultrymen, by the REPEAT ORDERS. No otner manufacturer has such a host of repeat-order customers. A typical order was that of N. R. Hankins, Narrowsburg, N. Y. "Please find Money Order enclosed for three more of the No. 3 Buffalo. I have tried a lot of different makes of incubators in the seven years I have been in the poultry business, and can't find an equal to your Buffalo". Or that of Mrs. M. S. Barber, Wales Center, N. Y. "I began my chicken business with your fifty egg machine. Am now owning two of the larger Buffalos and doing custom hatching and selling pure bred poultry. Enjoy the work and thanks to you, Mr. Cyphers, for the many helps you have given me when I asked them"

The BUFFALO COLONY BROODERS and HANDY HOVERS have just as many warm friends, and Repeat Order Customers. Drop us a postal today and let me tell you about them. Address

BUFFALO INCUBATOR CO.

484 Dewitt St., Buffalo, N. Y.

CHAS. A. CYPHERS, President

MRS. CLARK TUTHILL.

We greatly regret the fact that in publishing the show awards of the New York State Fair, held at Syracuse, no mention was made of the Blue Andalusian winners. This was not our fault as the copy of the catalogue we received did not contain the winnings of the Andalusions. We have learned since this great fair that Mrs. Tuthill, of Waverly, N. Y. won, with her Blue Andalusians, in unusually strong competition, 1st and 3rd pullet. Up to the present time we have been unable to learn of any other winnings, in this class, made by anyone who is advertising in the Fancier. If any of our readers have been overlooked or their awards at the Syracuse State Fair have not appeared in the Fancier, if they will advise us concerning the same, we will be glad to see that they are published in a future issue of our journal.

EDWARD SCHILLER.

We have just received notice from Mr. Edward Schiller, of Pattersonville, N. J. that he has made the following winnings, in strong competition, thus far this winter. We are unable to state, however, whether these winnings were made on White Orpingtons or Buffs, as Mr. Schiller did not advise us in which class of birds he was showing. However, at the New York State Fair, Mr. Schiller won 3rd and 5th old pen and 5th hen. At Gloversville his birds won 1st old pen and 1st young pen and special over all varieties, with fifty pens competing. He also won 1st and 2nd cock, 1st and 2nd hen, 1st and 2nd pullet, 1st and 3rd cockerel. At the Palace Show his winnings were 3rd and 4th hens on two entries. At the Rensellaer County Fair Mr. Schiller's birds made practically a clean sweep. We are glad to note that the White Orpingtons are still holding their own in popularity and there is no question but that they are among the most useful and profitable birds bred at the present time. The one great draw-back to the White Orpington has resulted from the fact that it has been practically impossible to produce "stay white" birds, but great progress has been made in this respect during the past two or three years among the leading orpington breeders of the country and we predict that in the very near future, we will find as large a percentage of "stay white" White Orpingtons as can be found among any other white varieties or breeds of birds in this country.

C. GUY MYERS.

At the late Harrisburg Poultry Show, C. Guy Myers, of Siddonsburg, Pa., made the following remarkable winning on his Barred Plymouth Rocks; namely, cup for greatest number of points in the show, cup for best display in the show, any variety, cup for best display in American class, 1st and 3rd cocks; 1st, 2nd, 3rd, 4th and 5th hens; 1st and 3rd cocks; and 5th cockerel. 1st, 2nd, 3rd and 4th pullets; 1st exhibition pen; 1st and 2nd cockerel bred hen; 1st cockerel bred pullet; 1st cockerel bred pen; 1st pullt bred cock and 1st pullet bred cockerel. That winning ought to satisfy the most fastidious breeder and we certainly offer congratulations to Mr. Myers on this unusual victory.

More Crashing Owen Farms Victories

BIG WINNINGS AT

Grand Central Palace, New York

In Buff Orpingtons, White Orpingtons and White Rocks.

8 out of a possible 15 firsts. 11 out of a possible 15 seconds. In only two classes going lower than second. Again we won first cockerel in all three varieties; also second cockerel, or the same as six firsts on cockerel. Also first hen in all three and second hen in two, or five firsts on hens. Best display in all three varieties awarded to Owen Farms.

WHITE LEGHORNS.

I made my initial bow as a breeder of White Leghorns at the Palace. Had not intended showing this variety this season but having some exceptionally fine birds I could not resist the temptation to try them out at New York in the hottest class of the year, and won first cock, second and fifth cockerel and first pen; also second best display.

Chicago Coliseum, December '14.

On White Wyandottes and S. C. Reds in hottest competition I won 7 out of a possible 12 firsts, and 4 seconds. Placed in every class and winning first cockerel and best colored male in each variety. A great winning in the greatest show of the West.

Show, Breeding and Utility Stock Sale.

I still have for sale birds that will win for you at your show and breed you winning chicks, and also have left a limited number of superb utility birds. Satisfaction guaranteed or I will pay return charges and refund full purchase price.

EGGS FOR HATCHING.

From best matings in America, $10.00 for 15. $19.00 for 30. $30.00 for 50. $41.00 for 75. $50.00 for 100.

From grand second quality pens equal to many best, $5.00 for 15. $15.00 for 50. $25.00 for 100.

Buff Orpingtons, White Orpingtons, White Wyandottes, White Rocks, S. C. Rhode Island Reds and S. C. White Leghorns.

FREE MATING LIST FOR 1915

will be ready in about two weeks.

OWEN FARMS

163 William St., Vineyard Haven, Mass.

Maurice F. Delano, Proprietor — Frank H. Davey, Superintendent

THE WEST MOUNTAIN POULTRY YARDS.

The West Mountain Poultry Yards, of Nougatuck, Conn., made twelve entries in the White Wyandotte class at Harrisburg, winning ribbons on every entry made as follows: 2nd and 8th cocks, 4th and 8th hens, 1st, 3rd 6th and 7th cockerels, 3rd and 4th pullets and 3rd pen. When any White Wyandotte breeder, no matter who he is, can make such a winning as the above, against as successful a breeder as A. J. Fell, of West Point, Pa., the fact fully demonstrates the exhibition quality of that breeders stock.

S. W. BRIGHTBILL.

S. W. Brightbill, of Pennbrook, Pa., advises us that his winnings at the last Harrisburg, Pennsylvania Show, in the S. C. White Leghorn class were as follows: 2nd, 4th and 5th hen; 1st, 2nd and 5th cockerels; 1st, 2nd, 3rd and 4th pullets and 1st pen. Mr. Brightbill did not show in the cock class. His birds were highly commended by everyone who knows what a real White Leghorn is. Mr. Brightbill could have taken a very attractive price for some of his winning birds but he refused to sell them as he breeds from his winners and give his patrons eggs for hatching from the same pens as those from which he hatches his own show birds.

PFOUTS POULTRY FARM.

Pfouts Poultry Farm, Bucyrus, Ohio, had practically everything their own way at the Marion, Ohio Show, in the S. C. White Leghorn alley. Their winnings at this popular show were as follows: 1st cock, 1st hen, 1st, 2nd and 3rd cockerels, 1st pullet, 1st pen. They also won the $40 champion silver trophy cup for best male in the show, 3 times in succession, which determines the ownership of this very valuable cup. They also won the $3 special for the best pen in the Mediterranean class. Mr. Pfouts advises us that he has a fine line of utility and exhibition birds for sale at very reasonable prices. He guarantees a square deal or money will be refunded. Write the Pfouts Poultry Farm, Bucyrus, Ohio, before placing your order for White Leghorns elsewhere.

WILLIAM WOLFARTH.

William Wolfarth, of Mandfield, Ohio, is one of Ohio's most popular and widely known Golden Wyandotte breeders. Mr. Wolfarth's birds have been winning constantly in many of the middle west largest poultry shows in very strong competition. His birds are magnificent in color, ideal in shape, with as fine head points as one could desire in a Golden Wyandotte. Mr. Wolfarth advises us that he has a fine flock of young birds for sale and his prices are always reasonable. We believe that the readers of the Fancier can make no mistake in giving a portion of their orders for Golden Wyandottes to Mr. Wolfarth. Will you kindly mention the Fancier when writing him. Always address William Wolfarth, 221 Glessner Ave., Mansfield, Ohio.

FRANK D. HAM.

Another very successful exhibitor at the Palace Show was Frank D. Ham, of Livingston, N. Y. Mr. Ham breeds Ringlet Barred Plymouth Rocks and his first prize cockerel at the Palace was

(Continued on page 60).

Why Risk Losing Your Chicks?
THIS BROODER WILL RAISE THEM

It is poor policy to trust your valuable flocks of chicks to brooders which have not been widely and thoroughly tested by practical chick-growers. Fortunately, you are not compelled to risk disaster. Simply use "the brooder that made good" in the hands of thousands of poultrymen—experts and amateurs—during the last two seasons. It will surely make money for you too. The

Newtown Giant COLONY BROODER
Coal-Burning, Self-Feeding, Self-Regulating

is not an experiment, not a machine of unknown quality. It has publicly demonstrated its wonderful efficiency in the most conclusive manner. Let "the other fellow" experiment if he can afford it, but pin your faith on the tested brooder that raises the most and best chicks with the least labor and at lowest cost. **That's the Newtown!**

Proof of these strong claims appears in our new Brooder Booklet. Send us your address today and we will mail you a copy free.

WHITE CAMPINE CLUB!

Get into the greatest boom ever launched in poultrydom.

White Campines are far more hardy than any other small breed of poultry, easy to rear, mature very rapidly, lay better than White Leghorns, and are full breasted and plump, tender for table use even after the second year.

They are not nearly so nervous as Leghorns nor such aggressive foragers, yet produce eggs at a lower cost for feed, and far less for fencing.

Do you know what this means? It means that thousands of commercial plants will stock up with them in the next few years.

Join the club and breed the greatest fowl ever created.

Walker Lybarger, Sec'y.,
Gambier, Ohio.

EL-CO-VA FARM

White Wyandottes S. C. Anconas

Best Matings—$5.00 per setting of fifteen eggs.
Second Best Matings—$3.00 per setting; two settings, $5.00.

Box 12 Menominee, Mich.

SINGLE COMB RHODE ISLAND REDS, WHITE PLY. ROCKS & WHITE WYANDOTTES

Eggs from the very strongest pens of Top Notchers that the Farm has ever mated, $7.50 per 15; two settings, $14.00; three settings, $20.00; $40.00 per 100. BABY CHICKS, $80.00 per 100; $45.00 per 50; $25.00 for 25. STANDARD MATINGS, $4.00 for 15 eggs; two settings, $7.50; three settings for $10.00; $20.00 per 100. BABY CHICKS, $40.00 per 100; $25.00 for 50; $13.00 for 25.

Utility department—we have enlarged our hatching capacity 100 per cent and are offering eggs and chicks from high grade utility matings, many of the breeders carry quality far above utility grade as well as being from a good producing strain. EGGS—$7.50 per 100; $4.00 for 50; $2.25 for 25; $1.50 for 15. BABY CHICKS—$18.00 per 100; $10.00 for 50; $5.00 for 25.

We still have a few cocks and cockerels that are extra good value for the price, $10, $7.50, $5.00 and $3.50. A few late hatched pullets at $2.00 each. Earlier birds at $7.50, $5.00, $3.50 and $2.50.

If you have not received our Fall Catalogue, send for it, it is free. Remember that we ship on approval and guarantee absolute satisfaction and that our prices are made low to meet the hard times.

MIRIMICHI POULTRY FARM, FOXBORO, MASS.

W. H. SAART, Proprietor. W. H. WITHINGTON, Manager.

(Continued from page 57).

certainly a wonder, while his other winning males in this class were almost equal to the first prize winner. One cockerel which Mr. Ham showed at the Palace possessed the most remarkable barring in its fluff that we have ever seen on a Barred Rock. This bird ought certainly prove to be a great breeder and will be worth his weight in gold to anyone who is fortunate to purchase him from Mr. Ham. We have had the pleasure of examining Mr. Ham's winning cockerels and were more than delighted with the wonderful even barring they possessed right down to the skin. Mr. Ham is carrying a very attractive ad in this issue of the Fancier and it will pay anyone who is interested in Barred Rocks to write him before ordering elsewhere.

MARTLING HENNERY.

The Martling Hennery, Ridgefield, N J. made a wonderful sweep in Silver Campines at the Palace Show and their birds deserved every favorable comment made about them. There was one point about the Martling Hennery Campines which impressed us most favorably and that was that they possessed the neatest headpoints of any Silver Campine we have examined in all our experience. Usually the Campine carries a larger head than its body will warrent, if proportions amount to anything in a breed of fowls. The Martling Hennery Campines have a neat, small, intelligent head, resembling the Leghorns. This feature has been one of the hardest to breed into the Campine family and that the Proprietor of the Martling Hennery has succeeded in accomplishing this feat goes far to popularize his strain of Campines with the Campine breeders of this country.

The full awards of the Martling Hennery at the Palace Show are as follows:

KAUFMANN & WINDHEIM.

It is a pleasure to us to call the attention of our readers to the ad of Kaufmann & Windheim in this issue of the Fancier. These gentlemen are located at Nutley, N. J., and breed what is known as the "Bill Taft" strain of Rose Comb Rhode Island Reds. Their winnings during the past several seasons have attracted world wide attention. At the last Palace Show, their exhibit of Reds was one of the most attractive ever assembled at that popular exhibition. We understand that these gentlemen won the best display in Rose Comb Reds three times in succession at the Palace Show. The writer took particular pains to examine the Rhode Island Red exhibit of Messrs. Kaufmann & Windheim at the Grand Central Palace and we were certainly greatly impressed with the wonderful quality of the "Bill Taft" strain of Reds. There is a wide difference of opinion as to what constitutes real, red color in this popular breed, but we believe that this question could have been easily adjusted, once and for all, if all the Red breeders in the country could have been at the Palace and looked over the winning birds as shown by these gentlemen. We believe we are justified in saying that the exhibit of Reds at the Grand Central Palace Show this winter was the most ideal in color and measured up, in a larger degree, to the requirements of the Standard, so far as shape and symmetry are concerned, of any lot of Reds we have ever seen at any one exhibit in all our experience in the poultry business. Many of the most noted Red breeders had birds on exhibition at this show and everyone was profuse in their words of praise with regard to the quality of the Kaufmann & Windheim exhibit. Following is a list of the winnings of the "Bill Taft" strain of Reds made this season.

These victories speak for themselves and need no further comment as to the quality of birds Messrs. Kaufmann & Windheim breed. Better write them for prices if you are in the market for Reds. Always address Kaufmann & Windheim, Nutley, N. J.

Wolfarth's Golden Wyandottes Win Again.

At the last Ohio State Fair, 1914, Mr. William Wolfarth's Golden Wyandottes won the following prizes in strong competition; viz., 1st and 3rd cocks, 1st hen, 1st and 2nd pullets, 2nd and 3rd pens and 3rd cockerel.

The 1st hen and 1st cock won first prize respectively last year at this same show. At the Forest City Fair, 1914, Mr. Wolfarth's Goldens won 1st and 5th hen, 2nd pullet, 3rd and 5th cockerel, and 3rd pen. Mr. Wolfarth advises us that he has the finest lot of youngsters this year he ever raised. They all possess that rich, dark, bay lacing so much sought for among Golden breeders. Any one desiring A No. 1 birds in Golden Laced Wyandottes can surely secure them from Mr. Wolfarth as he has a grand lot to select from. Get in your orders and avoid disappointment as they will go fast at the price Mr. Wolfarth is asking for them. Address William Wolfarth, 221 Glessner Ave., Mansfield, Ohio.

SUCCESSFUL Poultry Lessons FREE

20 Lessons FREE to Everyone Purchasing a Successful Incubator or Brooder

Let Gilcrest, the successful man, start you right—keep you going right—and help you cash in on the profits this season that you hope to make, can make and deserve to make raising chickens if you start right.

Successful Incubator and Brooder

J. S. Gilcrest, Pres.

These 20 Poultry Lessons Are Really Worth $25 or More You get them FREE with the Incubators *guaranteed* to hatch larger and stronger chicks and a larger percentage than any other incubator when operated under the same conditions. One of the oldest and most successful makes of Incubators sold today. Incubators that "make good" because they *are* made right. Remember Gilcrest handles high-grade poultry, too—stock and eggs of all leading varieties—land and waterfowls.

Successful Grain Sprouter

Built of all steel sections—fireproof. Changes 1 bushel oats into 3 bushels fresh, green, egg-making feed. Makes hens lay in winter. Send for free descriptive circular and low prices.

Write for Catalog of Successful Incubators and Brooders. Enclose 10c if you also want "Proper Care and Feeding of Chicks, Ducks and Turkeys." But write for Incubator catalog sure anyhow.

Poultry Diseases and Remedies

Q. Can you tell me what causes the weakness in my chicks? They are two weeks and one-half old and they walk down on their hocks. I keep the temperature up to 100 degrees in my brooder and have cement floors in my brooder house. Is it necessary to keep a litter in my brooder house to scratch in? If so, what would you use? Yours, E. D. K., Erie, Pa.

A. You are keeping temperature in your brooder house too high. Lower it to 85 degrees. Yes, by all means keep litter from 3 to 5 inches deep on the brooder house floor and scatter all grain in it. Chaff from the barn with the long straw or hay taken out is excellent for litter. If you can't get chaff use cut clover, hay or alfalfa. Feed rather sparingly for a few days. Keep fine grit, charcoal and green food before them at all time and be sure they have plenty of fresh water before them, into which put about eight drops of Nux Vomica to each pint until the chicks begin to improve nicely and your troubles will soon cease Over-feeding and over-heating are the two greatest causes of leg weakness in baby chicks, especially where exercise is lacking.

Q. I have a R. I. Red cockerel, one of my best birds, that has a tough yellow growth in both corners of his mouth. He can hardly close his mouth and seems to suffer when he eats. Can you tell me what is the matter with him and what I can do to cure him?

A. Your bird is undoubtedly suffering with canker. Remove the growth with a tookpick or any blunt instrument; cleanse the affected spots with Hydrogen Peroxide or a Boraic Acid solution of twelve grains to one ounce of water, and apply burned alum (powdered) and flowers of sulphur, equal parts, twice daily until a cure is effected. Keep the bird by himself in clean, dry quarters until well.

Q. Can you tell me how to keep sprouted oats from moulding? I have no trouble in sprouting oats, but they mould and smell badly and I am afraid to feed them to my birds. G. P. S., Dallas, Texas.

A. Yes, you can prevent sprouted oats from moulding by putting twenty drops of Fermaldicide in each ten quarts of water used to dampen them. Use the above solution from the start and you will have no more trouble with moulded oats.

Q. Can you tell me what to do for my baby chicks? They are about two weeks old, they have no bowel trouble but seem to be getting "thin" in flesh, wont eat hardly anything. Have no head lice but still they wander aimlessly around or hover under the hen nearly all the time.

A. Look under the wings of your little chicks, close to the body and no doubt you will find a number of little light colored lice, this, we believe, is the trouble with your chicks. If so, dip the end of your finger into vaseline and rub under wings where you discovered the lice. Just a little will be sufficient and your trouble along that line will soon disappear and your chicks will come out all right.

Q. Can you suggest anything to stop my hens from eating their eggs? If they find an egg anywhere, especially in the litter on the floor, they will devour it as though they had nothing to eat for a week while the facts are, they have all the grain, dry mash and green food they can eat. They are laying well and I am anxious to get every egg I can to hatch as they are my very best birds.

A. You are very likely feeding enough meat to your birds. I would advise that you gradually increase the amount of beef scraps you are feeding until you reach the proportions of about 10 per cent in weight of the mash feed. The most successful method I have ever tried to stop birds from eating their eggs is to scatter the egg shell from incubators after I have taken off a hatch—over the floor of the breeding pens. The hens soon tire of the shells and after a short time they will cease to bother th eeggs, no matter where they find them. I have tried a number of methods but the above has given me the most satisfactory results

Brother Poultrymen, Here is a New Remedy!!

Conkey's Canker Special

If you keep chickens, you have had your experience in fighting Canker, just as you fought Roup—and lost—before Conkey's Roup Remedy was brought to your attention twenty years ago.

Today we say to you—try Conkey's Canker Special—Apply it to the eyes, throat and nostrils of the sick birds and watch how rapidly the swellings disappear. Don't have profitless, canker-blind birds in your flock.

Also, try it on your show birds that develop show-room colds.

Send 50c for a bottle today. *The regular Conkey Guarantee of complete satisfaction or your money back is behind this article—and you ought to have it in your Conkey Corner.*

IDEAL BARRED PLYMOUTH ROCKS

Prolific Layers, as well as having all the requirements of the modern exhibition fowl.

February and March Hatched Cockerels

I can furnish you cockerels at $4.00 and $5.00 each, that will infuse wonderful laying quality into your flock. My winning females at Baltimore, Md., Show, also were in my record laying pen last year, these females averaging 171 eggs each for twelve months. I have cockerels from this grand blood at $7.50 each.

March and April Hatched Pullets

I can supply a limited number of pullets from heavy laying ancestry at $3.00 each. Pullets from my record layers at $4.00 and $5.00 each. Blood will tell, and in purchasing from this established strain, you will secure for a nominal figure, stock that at once will demonstrate it's quality.

Show Birds of Superior Quality

I can supply you with single birds or pens, that will stand the test and this for prices that for the quality, is most reasonable. Write me for particulars.

James T. Huston, Box W, Williamsport, Pa.

S. C. BLACK MINORCAS

An established strain with an established record have again made a clean sweep at Syracuse, winning 1-2-3 Cock; 1-3-4 Hen, 1-2-3 Cockerel, 1-2 Pullet, 2 Pen, old; 2-3 Pen, young, in the best and largest class of Minorcas ever cooped at Syracuse.

Have young stock and 300 grand hens to dispose of at from $3.00 up.

Reds Reds Reds

At the Chicago Show, December 11th to 16th, 1914, in the greatest Red class ever shown in America, we won:—Rose Combs—1st and 2nd cockerel, 1st old pen and 3rd hen; Single Combs—2nd, 3rd and 6th cockerel, 2nd pullet, 4th hen and 4th old pen. This win with the sweep we made at the Grand Central Palace Show, December 1st to 6th, 1914, proves that we have the goods. Stock and eggs for sale.

1202 Commonwealth Bldg. Pittsburgh, Pa.

A Sweeping Victory at Chicago

Reinforced by Dune Alpin's invincible S. C. White Leghorns, Wilburtha's "Best all-round strains of the best all-round breeds" have once more carried the day. The long list of triumphs at the Palace, Madison Square Garden, Hagerstown, Allentown, etc., have been ably supplemented by the following winnings at the recent Chicago Show:

S. C. WHITE LEGHORNS
1st, 4th Cock; 2d Cockerel; 2d, 3rd Hen; 1st, 4th Pullet; 1st, 3rd Young Pen; 1st Old Pen.

S. C. BUFF LEGHORNS
3rd Cock; 2d Pullet; 5th Cockerel; 1st Old Pen; 3d Young Pen.

COLUMBIAN WYANDOTTES.
1st, 4th Cock; 1st Hen; 1st Pullet; 1st Old Pen; 1st Young Pen; 2d, 5th Cockerel.

COLUMBIAN PLYMOUTH ROCKS.
3d, 4th Cock; 3d Cockerel; 2d, 4th Hen; 2d 4th Pullet; 1st Old Pen; 1st Young Pen.

BUY OUR STOCK AND MAKE A NAME FOR YOURSELF.

Our exhibition birds—beautiful, showy and full of vitality, are ready to win for you in any show. Wilburtha blood tells—both in prizes and eggs.

UTILITY—Wilburtha success is built first on utility. Our birds are supplying a most enviable egg and broiler trade. Send for latest Mating List—free. Order early. Buy the birds that win and besides bring in the profits every day.

BOX F, Trenton Junction, N. J.

REPORT—TO GOOD TO KEEP.

By the courtesy of this paper we repeat herewith two letters sent us at different times by one of our customers. These letters are so full of enthusiasm over the poultry business and incidentally over the "Successful Incubators and Brooders, that we are sure the readers of these lines will be glad to know of this great success. Here goes:—

Waterville, Minn., July 7th, 1913.
Des Moines Incubator Co.,
Des Moines, Iowa.
Gentlemen:—

I have always been somewhat sceptic about Incubators, but your catalog finally got me to order your 240 egg "Successful" Incubator. Although this was the first Incubator I ever tried I got 180 chicks from 180 fertile eggs; 60 eggs were not fertile. The second hatch brought me 235 chicks from 240 eggs, third hatch 195 chicks from 195 eggs. Can you beat it? I always raised from 2-300 chicks by the old method, which gave me a lot of trouble. I am now thoroughly converted to the use of good Incubators. I have always found raising poultry profitable and with these results as obtained with your Incubator I find it not only still more profitable, but much safer and much easier. Next season I will want another No. 9 Incubator and a brooder. I raised practically all the chicks hatched. Respectfully,

Julius Wurst.

Nine Months Later.

Waterville, Minn., March 13th, 1914.
Gentlemen:—

Must again let you know about my success with the old and the new machine, received some time ago. My first hatch this season in the two No. 9 machines was 380 strong chicks from 480 eggs. The 100 eggs not hatched were not fertile. Your brooder pleases me also much. Can advise all who want to raise poultry to secure your machines and they will be sure to find poultry raising profitable.

Yours truly,
Julius Wurst.

Such results are not uncommon in the "Successful" Hatchers and we hope that every reader of these lines, not yet acquainted with these wonderful machines will send for their large and interesting catalog.

PLEASE MAKE THIS IMPORTANT CORRECTION.

Dear Friend:

In our monthly report of the egg laying contest which was sent out and which contained some suggestions with reference to roup, colds and catarrh, the omission of one word escaped our attention and made quite a difference in the preparation which we recommended for the treatment of roup. In order to correct this, and not mislead anyone, will you please add the following to the November report which was sent you just a few days ago?

"We wish to call the attention of all those who read and are interested in our monthly reports, to the omission of one word in the treatment which we recommended for roup, colds, and catarrh. We stated that one of the best remedies we had used was a mixture of three parts kerosene, and one part zenoleum, crealin or cresol. The word "liquor" should be inserted before the word "cresol." These are two entirely different preparations, and we did not notice the omission of the word until the report had been sent out and printed. Some of our men at the Station use three parts kerosene, and so do many others who use this treatment, but personally we have gotten best results where we used equal parts of zenoleum or creolin and kerosene. One or two treatments usually are sufficient if the case is taken in time. Don't forget to insert the word "liquor" before the word "cresol," wherever the last word appears in our article."

Regretting that we did not catch the omission in the first article, and thanking you for making this addition and correction for us, I remain,

Yours very truly,
T. E. Quisenberry,
Director.

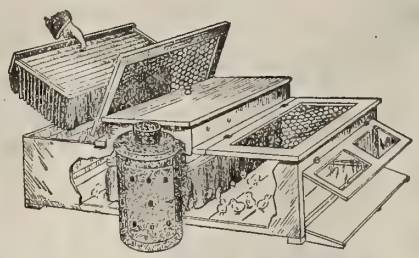
THE BUCKEYE INCUBATOR CO.

This is the new Klose Kontact Brooder that permits the raising of chicks in a normal temperature of 70 degrees instead of the hot house temperature of 90 to 100 degrees which is quite necessary in brooders that do not follow the Klose Kontact system.

This Klose Kontact idea appears to everybody that sees it and in the judgment of many experienced breeders, it is going to revolutionize our whole brooding systems which have been nothing more than minature hot houses that made the chicks susceptible to so



many ailments which might be avoided altogether. The idea certainly looks good and we are glad to know that so many of our subscribers are writing for the descriptive literature which the Buckeye Incubator Co. of Springfield, Ohio are sending out free of charge. We understand that The Buckeye Co. are now building a portable hover of The Klose Kontact type which sells as low as $7.50.

POULTRY FANCIER, Hanover, Pa.

YOU NEED THIS BOOK!

In fact it is more than a book,
It is a Great Scientific Discovery;
IT IS A WONDERFUL SYSTEM OF SELECTION AND BREEDING FOR EGG PRODUCTION which is going to revolutionize the poultry industry.

What Edison has done in the realm of electricity, what Burbank has accomplished in the field of horticulture, Walter Hogan has done for the poultry industry in his New Book,

"The Call of the Hen"

IT ENABLES YOU TO EASILY CULL YOUR FLOCK. YOU CAN TELL THE HIGH PRODUCING MALES AND FEMALES BY A SIMPLE EXAMINATION AND TEST

DON'T KILL THE LAYING HEN, BUT SWAT THE DRONES

IF YOU keep a dozen hens you need this book. If you keep two dozen or more you couldn't afford to be without it if it cost you $10.00 a copy. Don't judge "THE CALL OF THE HEN" by other poultry books. It's more than a book. It's an Illustrated description of a New Discovery, revolutionary in nature, the result of a lifetime of investigation and experimenting

SWAT THE DRONES!! In every flock there are drones—"star boarders"—hens laying one, two or three dozen eggs a year. They are a dead loss. They "eat their heads off," living on the profits which your good layers produce. To trap-nest the flock is tedious and expensive—so much so that the average poultryman cannot afford it. By the Hogan system you obtain results of a year's trap-nesting by a simple examination requiring but a few seconds.

Hoganize Your Flock Now! Right Now, this month, is the time to cull your flock of hens, market your loafers, keep your workers, make room for young stock. By the Hogan method you can, not only select your good layers, but also good BREEDERS, both male and female, birds that will reproduce their kind and enable you to rapidly increase the average egg production of your flock.

Price Reduced to $1.00.

First Time the Book Was Ever Offered At This Price
Our "Money-Back" Guarantee Protects You

YOU TAKE NO CHANCES when you send us $1 for the new revised, cloth-bound, profusely illustrated edition of "THE CALL OF THE HEN." We do not ask you to take our word or it, nor the word of such men of unquestioned integrity as T. E. Quisenberry, Director of the Missouri State Poultry Experiment Station; Lyman C. Byce, President of the Petaluma Incubator Co., and a member of the Executive Board of the American Poultry Associaton; Michael K. Boyer, and others. You can be your own judge. Get the book. Follow its directions. Apply your own tests. Then if you are not satisfied—MORE THAN SATISFIED—send back the book and we will refund the money.

Address: Poultry Fancier. Hanover, Pa.

Ads. will be inserted in this department under the following conditions: The size shall be uniform, each adv. occcupying one inch single column —each advertiser using same space each month. Ads may be changed every three months if desired. The cost is $2.50 per month. Payment strictly in advance—no exceptions to this rule. The price is made exceptionally low on this account.

Silver Campine, Cecilian Buttercup, 15 eggs $1.50, 30 eggs $2.50. We have mated these pens that should breed and produce fine vigorous, fine marked birds. Give us a Trial Order.

LEVI D. YODER,
Box 37, Dublin, Bucks Co., Pa.

WOLFARTH'S GOLDEN YANDOTTE

Again the above strain were winners at Ohio State Fair. Also the Great Forest City Fair, 1914, in the keenest competition. If in need of stock to strengthen your flock I can help you. Write me your wants.

WM. WOLFARTH,
221 Glessner Ave., Mansfield, Ohio.

AT LAST

A Sure Cure for Roup

And it's Smith's. You saw it demonstrated at the great shows. You know it's endorsed by the greatest poultrymen. Ask your dealer for Smith's Roup Extractor, or send 50c or $1.00 and same will be sent Parcel Post.

JOHN B. SMITH INSECTICIDE CO.,
New Haven, Conn.

Single Comb Buff Leghorns

Special sale 50 cockerels, utility or show birds, the best I ever raised at prices that will move them, also now booking orders for baby chicks from 10 cts up, bred from great layers, send for mating list and show winnings.

C. W. GILBERT, Man.,
Tully, N. Y.

White Wyandottes

Regal strain cockerels for sale. Big, strong, vigorous fellows, pure white, reared on free range, all bred from prize winning stock and from extra good layers. Two, three and five dollars each. Money back if not satisfied.

L. W. COOK,
Tunnel, N. Y.

Sacrifice Sale

S. C. White Orpingtons

All bred from Baltimore and Philadelphia winners. Cockerels, $2 and up. Pairs, $3.50 and up. Trios, $5.50 and up. Pens, $9.00 and up. tf

BONNY VIEW POULTRY FARM,
W. S. Sechrist, Prop.,
Keyser, W. Va.

S. C. White Leghorns

only. Persistent Layers That Win. 300 yearling breeders for quick sale at $1.00 each. At this price these birds are big value. Let us send you description of them. Barron's stock in the Fall. Circular.

CHRISTY FARM, Box J. Cortland, N. Y.

WHITE ROCKS

Grave's Strain

Choice quality cockerels. Vigorous, lusty and white at $3 and $5 each. A limited number of high class females. Eggs in season $2; three settings, $5.00. tf

C. P. GOWMAN,
Mt. Airy, Maryland.

Jersey Grit for Fowls

Egg maker and invigorant, four in one, sold under guarantee, makes weak fowls strong. Two hundred pounds for one dollar, freight prepair to customers anywhere within two hundred miles of Paterson, New Jersey, under special act of Utilities Commission. Send for samples and analysis.

ARTHUR W. BISHOP,
Paterson, New Jersey.

Elosser's

Black Langshans

Baltimore, Madison Square, Philadelphia, Pittsburgh, Buffalo, Hagerstown and Washington winners.

Choice cockerels, $3 and up. A limited number of high class exhibition females for sale. tf

PORTER ELOSSER,
Cumberland, Maryland.

COLUMBIAN ROCKS

Enslin's Black and White Strain, Winners at Madison Square Garden, 1913-14 and Newark, 1914. Prices on stock, Day-old chicks, very reasonable. Eggs in season. from best matings, $3 to $5 per 15.

T. J. ENSLIN,
Hackettstown, New Jersey.

BRYANTS'

Single Comb R. I. Reds

Win at Philadelphia Show. 1st Pen and 4th Cock. Also won 2nd Cock at Bridgeton, N. J. and 2nd Pen at Michell's Seed Store. Eggs from exhibition matings $3.50 per setting, from heavy laying utility $1.50 per setting or $8.00 per hundred. Baby chicks $17.00 per hundred.

A. R. BRYANT,
Aldan, Delaware Co., Penna.

S. C. Anconas

Exhibition or Utility Birds of high standard quality. Three silver cups this season for best displays. Stock reasonable at all times. Eggs $2. and $5. per 15.

A. L. CHAPPELEAR,
Somerset, Virginia.

IN DECEMBER

1914, without showing same bird twice, we won, 1st White Leghorn Pen, Philadelphia; 2nd White Leghorn Pen Palace, N. Y.; 3rd White Orpington Pen, Philadelphia; 5th White Orpington Pen, Palace N. Y. In last ten weeks of 1914 we have received 38 prizes, a male heads each egg pen which has won in good competition.

White Orpington and White Leghorn Eggs, $4, $3, $2, for 15. Show Chicks 35c each. Stock for Breeding or Exhibition, all ages, both sexes, at honest prices.

ROBERT AND LOUISE DAVIS,
Englewood, New Jersey.

White Wyandottes

Winners at the R. I. Poultry Assn. 1912, 1st Cock, 4th Ckl., 1st Pen. 1913, 1st Cock, 1st Hen, 3d Ckl., 1st Pullet, 1st Pen. 1914, 1st Cock, 4th Hen, 1st Ckl., 1st and 2nd Pullet, 2nd Pen. Stock and eggs for sale.

E. W. LOOMIS,
Georgiaville, R. I.

Golden Laced Wyandottes

A few nice cockerels from my splendid laying strain. Breeders are good color and beautifully laced. Let me book your order early for eggs and chicks as I never have enough to go around.

MRS. GEORGE W. CHURCH,

Quality Buff Orpingtons

Win 9 firsts and special, also minor prizes at Providence and Pawtucket, Rhode Island's largest shows. Five grand matings of linebred trap-nested stock, that will produce winners. Eggs $2 and $3 per 15. A few choice cockerels at $5 and $10.

HENRY BUTLER,
Saylesville, R. I.

WINNERS OF FIRST COCKEREL & PULLET, BOSTON 1913 BRED & OWNED BY JOHN S MARTIN, PORT DOVER, CANADA

Vol. XX. HANOVER, PA., FEBRUARY 1915 No. 2

THE BEST BREED

By C. F. Townsend, Weedsport, N. Y.

Probably no question puzzles the beginner so much as that of deciding upon which breed will be the best for him. Generaly the beginner wants eggs, first and foremost. Sometimes he has a touch of the show fever, but that is incidental. As a rule he wants to make money and he depends upon the egg yield to do it.

The beginner is not posted, and when he reads—in a supposedly reliable magazine—that a certain speckled Leghorn hen, valued at "three dollars," has laid $21.29 worth of eggs in one year, he rarely stops to figure that, at 48 cents per dozen, this market-bird must have laid 532 eggs in a year! And eggs do not average 48 cents a dozen the year round. Indeed if the man who has "three dollar" hens, gets 30 cents a dozen through the year for his market eggs, he is doing well. And at 30 cents a dozen, this "three dollar' speckled Leghorn hen—sometimes called another name—must have laid 850 eggs to have brought $21.29 in one year.

So the beginner, instead of laying a complaint with the Post Office Department over fradulent use of the mails, invests in speckled Leghorn stock or eggs. But his "three dollar" hens—if, by chance, he ever gets any worth even that much—never quite hit the mark. Not a blessed one of them lays 850 eggs in a year—as she must do it at 30 cents a dozen, to bring in $21.29 in twelve months. And that advertiser isn't in jail as yet.

Perhaps the breeder decides to learn which is the best breed before he invests. Again he reads—in a magazine which he **thinks** is reliable—that a certain self-styled Pro-fes-sor, who runs an alleged poultry "schoool" has made six hens—count them, please—s-i-x hens— produce considerably more than One Thousand Dollars in a year! He cries "Eureka!" He thinks he has found it. That this Pro-fes-sor can tell him which is the best breed and will show him how to "make" six hens "bring" between twelve and fifteen hundred dollars a year. He sends for a "prospectus." But, oddly enough, the "soi-distant" Pro-fes-sor bashfully and modestly shrinks from saying anything about how he "done" it. But the beginner is assured in many pages of execrable English and badly shattered grammar, that, by paying something less than a hundred good, hard dollars, he may become an "expert," a "lecturer," a "manager," and able to care for "thousands of birds," all learned in a few "easy lessons" studied in a hall bedroom, forty miles from a chicken farm!

I cite these cases withont any malice. I mention no names. Our Uncle Samuel—blessed be his name!—is getting busy and the "gold-brick" game will not be as safe and pleasant as it has been.

WHAT IS THE BEST BREED?

The answer recalls the boy's brief essay on "The Snakes of Ireland." All that he wrote was, "There aint no snakes in Ireland nohow!" So, to speak plainly, there is no "best" breed.

For years past, I have (as a relaxation from my work as a trial judge in both civil and criminal courts) tested out many breeds, and I have never found any "best". A pen of Fishel's White Rocks averaged over 200 eggs in a year. But so did a pen of Lester Tompkin's Reds, so did a pen of Tecktonius' Buff Leghorns, of Noftzger's Partridge Rocks, so did several others. And therefore, nobody can say that any of them is the best. This year I am testing some more Rocks, Golden Campines, Buff Orpingtons, White Leghorns, and Single Comb Rhode Island Reds—all entered—without cost, by the very foremost breeders of each variety. But, so far as laying eggs, I know in advance that while some pen will lead in egg production, it will not prove that the variety in so doing is the "best."

When a boy, I bred the once famous Jersey Blues. If you are an old timer you will remember what famous layers they were. If not, ask your grand father. He will tell you that those "old blue hens" would outlay anything living except a house-fly or a shad! On the quiet I am reviving this grand old

breed. No, you're wrong. I have no stock nor eggs for sale, and won't have. So you must guess again!

Seriously, the Jersey Blues equalled, and, I believe, excelled any layers of the present day, and scientific feeding was unknown at that time. We are progressing wonderfully in that respect. For instance, the Allen Milling Company, of Niagara Falls, N. Y., has formulated a peculiar laying mash that I am testing with amazing results. The company is not an advertising concern as yet, but I understand that any poultryman may obtain some mash, free, or at least get ful particulars for the asking. And if it goes, as I believe it will, there will be a big advertisement in the Fancier with my unquallified endorsement.

The reason I mention this is that big laying, lies in both breeding and feedng. Good feeding will never make a big layer of a scrub; and the best bred-to-lay pullet on earth will be a dismal failure as an egg

1st Cockerel and winner of State Championship at Williamsport Club Show. Bred and owned by C. Guy Myers, Siddonsburg, Pa.

producer unless she s fed rght. So there you are. In selecting a breed the beginner should know that there are four classes of fowls: Toys and Ornamentals, Meat birds, Meat and Eggers, the Egg makers.

Few beginners will care especialy for the first which includes all Bantams, Games, Frizzles, Klondikes, Rumpless, Sultans, Silkies and most of the Polish and Hamburgs. In bygone days, the two last named were great layers; but they have generally been so inbred, so feathered-to-death, that with few exceptions, they are mostly playthings—pretty to look at, but of little use commercially.

The meat breeds include the Asiatics, Cochins, Brahmas and Langshans, also the English "beef breeds," the Dorkings, Sussex, Cornish, Lincolnshire Buffs, certain continental vorieties like the La Fliche and our own Javas, which, despite their black shanks, have that yellow skin to which some of us still cling.

The next breds, as a class, are shy layers and because of their comparatively slow growth they make poor broilers and fryers. Their chief value then, is as roosters, and, when feed is "ballooning," as at present, the beginner should look elsewhere.

The "meat and eggers," usualy known as "general purpose" fowls, include many varieties—all good ones, too.

First, there is our grand old timer—the American Dominique. Where there is one of this variety growing to-day, there should be a thousand, for no better all round bird ever came from an egg.

Then, there are the Rocks in half a dozen varieties. In spite of their idiotic double mating, the original Barred Rock is still at the head. The Standard thinkers have done their best—or worst—to kill it; but its good qualities rise above all else and the fuss and feather frauds have not been able to down it.

Personally, I like the White Rocks best. In quality they are just the same, and no double mating nonsense endangers their commercial value. The White Rocks are good layers and admirable table fowls. So are the Partridge Rocks—a pen of the latter having averaged 235 eggs per bird for a year. This was very high, and no flock on earth would come anywhere near it. Therefore, the claim of a certain speckled Leghorn breeder that a "flock" of his birds, owned by another fellow, had a yearly average of more than 250 eggs is as silly and foolish as it is false.

The various other varieties of Rocks are not bred extensively and need not be considered.

There are eight or ten varieties of Wyandottes, but the beginner will find that he will do best with the White variety. The "dumpling" or "billiard-ball" kind may be best for the fuss and feathers, but for practical, money-making, the beginner should avoid that sort, as the longer bodied birds as a rule are much the best layers.

The Orpingtons are a numerous family, but the beginner's choice will—or should—lie between the Buffs and Whites. The latter got a black eye some years ago. Between the soulless, sordid "system" shark, and a smug, slimy, slippery "Fakir" the White Orpingtons were nearly ruined. Luckily one was so scared that he quit the game in time and went south after "suckers," while the other "sold out" and faded away—also in time. Thus relieved, the White Orpingtons are gradually recovering their rightful place as a first class egg and meat breed.

My tests, however, place the Buffs on a much higher plane. I find them better layers than the White variety, while as table fowls they suit my taste best of all. On the latter point, of course, every man must judge for himself. I know a man who likes a piece of rump roast better than porter house!

The Rhode Island Reds are good birds for the beginner. They lay well, hatch well, grow well and are excellent market fowls. There is no trouble in getting good colored birds with proper mating. I have in my best pens this year a pen of the Tecktonius and Reed birds, that are fit for any show, and that are laying almost as well as my Owen Farms' Buff Orpingtons or Young's White Leghorns and while the Golden Campines are leading the race, the others are close behind; while a pen of Partridge Rocks is a good fifth.

If the beginner goes in chiefly for eggs, he won't have much trouble to make a choice. The Leghorns and Campines are "it" in that line.

I have two trial pens of D. W. Young's White Leg-

horns, every bird of which is good enough to enter at Madison Square Garden—big, strong birds, too —which have been laying since September with no let up on cold winter days. And a pen of the same high quality Jones' Golden Campines has a slight lead as egg makers. This proves that when birds are bred right, fed right, with proper housing and care, they will deliver the goods.

This article is already too long, yet there are many things left unsaid. However, I am preparing a special circular on the Buff Orpingtons, White Leghorns, Golden Campines, Rhode Island Reds and Partridge Rocks. If you are interested in any of these varieties, send me your address on a postal card and I will mail you a copy. In conclusion, I will say that the beginner will make no mistake if he starts with any variety of the big six that I have named—provided only that he buys stock or eggs from a reliable breeder.

THE POULTRY SHOW, THE FOUNDATION OF THE FANCY POULTRY INDUSTRY

By James T. Huston, Williamsport, Pa.

How many of the breeders, dealers and fanciers of pure bred poultry realize the importance of our National Poultry Shows to the business in which they are so activel yengaged? We at times feel that the present day Poultry Exhibition is a much abused institution, and this abuse is in most part coming from the very sources from which we naturally would expect the greatest consideration and backing.

Mr. Theo. Hewes in the January issue of the Inland Poultry Journal hits the nail on the head, when he says, "We wish again to emphasize the fact that no national show can run six consecutive years, pay liberal premiums, employ the judges the exhibitors demand, and break even on less than a two dollar entry fee for singles and a five dollar fee for breeding pens," concluding with the forceful utterance, "that even then that good judgment must be used in every expenditure, and that every dollar must buy one hundred cents' worth."

As an experineced show man we believe Mr. Hewes gave careful thought in the penning of the above words, and that this condition has came under his absolute knowledge. We are not in a position to know the financial condition of all our National Shows, but we venture to say that few are on a paying basis regardless of the entry fees large or small. Why should this condition exist, and how it can be remedied is a question which must be solved. In most part our shows all over this broad land are managed by men who are giving much of their time, thought and ability in building up the show in which they are interested, and to our knowledge comparatvely few are receiving a penny for the vast amount of work that their interest in pure and fancy bred poultry has brought them. How long will these men continue this interest, and be willing to sacrifice time and money unless they are supported by the breeders, manufacturers of poultry supplies, feed men, journals, etc. who are the ones reaping the financial gain of the Poultry Fancy?

No one will question the fact that our Poultry Shows to-day are the foundation of the fancy, take away the shows, and the prop is down, and the fancy will go a simmering. If such is the case, and our shows are in jeopardy, is it not time that those who are making the fancy a business, (and in some cases many reaping a rich harvest from the fancy), is it not time for these to look into these conditions and help the shows?

The time was not so very many years ago, when the Poultry Show of from one thousand to fifteen hundred birds, could draw its entry with one or two judges, to-day the same show to receive the like number of birds must employ at least five or six, the reason for this is exhibitors demand specialty judges, and will not show unless same are engaged by the show at which they intend showing. Aside from the prestige and advertising obtained from a win at our

1st Pullet at Great Allentown Fair, 1914. Bred and owned by Guy Myers, Siddonsbdrg, Pa.

National Shows of to-day, the average exhibitor makes sure before his entry is made, that he will receive, if a winner, regular and special money which will defray his expense of showing, if such inducements are not offered, his entry is withheld.

Extensive advertising by the Poultry Show managements has become necessary, this not being confined to the Poultry Journals, but the city papers demand that in return for the publicity given the Poultry Show some return must be made in space advertising (you give one you must give all). These are a few of the many additions in the expense of running a poultry show, and which are putting to the wall many of our best exhibitions, in fact, at most, giving them the six years of life allowed in Mr. Hewes' truthful statement. Judges cost money, the ones who were glad of an engagement a few years

ago, at a twenty-five dollar ate, to-day demand fifty, etc. The exhibitor who was satisfied to show his birds, and be satisfied with a ribbon, to-day expects to win his entry back, etc. The papers which gave free write-ups of the shows a few years ago, to-day expect a column of advertising, etc. What are we to do for the Poultry Shows?

In speaking of the future of the Poultry Shows with a prominent exhibitor and breeder, a man whose business judgment in most matters you would consider sound, made this which to my mind was a very foolish statement for one engaged in the fancy poultry business for profit, "I see poor prospects for the shows outside of the biggest ones in the largest

2nd Hen at Williamsport Club Show; 1st Hen at Harrisburg, 1914. Bred and owned by C. Guy Myers, Siddonsburg, Pa.

cities, in fact the time will come when there will be few shows outside New York, Chicago, Boston and a few others." Pity the breeder, poultry appliance man, feed man, incubator man, etc., when this occurs. I wonder how much this breeder's prize winners would be worth if he had no demand other than to furnish New York, Boston, and Chicago winners, in other words the only prize birds that would be worth more than their value in pounds of meat would be of Madison Square Garden quality. This brings us to the point where we wish to impress upon all interested in fancy poultry, whether raising birds to show, or manufacturing supplies and feeds, support the shows, the more there are the greater will be the remand for your products. To the breeder who has entered the big show arena we ask the question, to whom are you selling your prize stock, to your competitor at the big show or the fellow who is willing to pay the price to win at his local show?

The secret of business success to-day is to create a demand for your product, the secret of success for the fancy poultry industry is to create a demand for your stock and where is the demand without the poultry shows?

We doubt not but that in some localities there are more shows held than should be, in fact, we are aware that in certain states shows are held in towns and cities only a few miles apart, and in most cases small shows and which after a few years give up the ghost, where on the other hand if the same towns and cities combined for one show, it could be rightfully called a National Show, and if supoprted by the fanciers, and those interested in the success of the fancy, be of profit, or at least of no loss—to all.

We would venture to say that at least seventy per cent of the exhbitors at our shows to-day are showing for the reputation they will secure—showing is a business proposition. How many of these breeders can retire from the show rooms, and yet expect business? How many of the journals could continue publication without the advertising of these same breeders? The buyer buys from the breeder who has made a reputation in the show room, and without a reputation he has nothing to advertise. You have it in a nut-shell.

We think if the breeder, manufacturer, feed dealer, journals, etc., would come to the point where they could realize the great debt they owe the men, who by their efforts and theirs alone are giving us our National Shows of to-day, they would find a way to preserve the "goose which lays the golden eggs."

We know of many shows which have lived the alotted six years, we know of others which died before their time, and this because a few men did not feel that they could afford, year after year, to go deep down in their pockets to promote an enterprise which to them meant work and only work, while to many it meant business which brought money, and yet to those who profited by the show, in the increased business brought, the idea of bearing the burdens of putting on the exhibitions was a thing unthought of by them.

Who will dispute the fact that the poultry show is the foundation of the Fancy Poultry Industry? Who will question the fact that the men who are giving us these grand opportunities, (where we can show the thousands of lovers of fancy fowls the winners we have bred), are not the great and unselfish men of the fancy?

It is men like Crawford, Atherton, Hewes, Riley, Denny, Hanks and others who are keeping the fancy where it is to-day. What are you doing to assist them? Let us consider these problems, and resolve that if the Poultry Show is the foundation of the fancy, we will endeavor to build on that foundation, so strong that nothing will be able to make it crumble.

Prevention of Roup Will Save Poultry

By Dr. Leonard Keene Hirshberg, A. B., M. A., M. D. (John Hopkins)

An ounce of prevention may be worth a pound of cure. In fact, it has proved so and it is true with practically all poultrymen when it comes to the treatment of colds, roup and catarrh. These diseases are responsible for the loss of thousands of birds each year. In fact, roup is the most deadly of

all diseases of adult poultry. Not only does it cause a tremendous number of deaths, but fowls which succeed in recovering from it, should not be used for breeding purposes, thus greatly increasing the loss due to its ravages. A great many people fail to distinguish between ordinary colds and genuine roup, due largely to the fact that the early symptoms of each are similar. Plain colds, however, are non-contagious and comparatively harmless, while roup is very contagious, usually either kills the bird or renders it unfit for further use. The first cases of colds should be taken as danger signals for roup, for when a chicken has a cold the roup germ can gain an easy foothold, and usually does so unless special precautions are immediately taken. Your attention will usually first be attracted to birds that have taken cold by their sneezing or making a wheezing sound in breathing while they are at roost, and by a watery discharge from the eyes. Upon examination the feathers on the under side of the wing often are foul and sticky, due to this mucous discharge from the eyes and nose. One or both eyes may be swollen or the lids stuck together by a sticky discharge. The appetite falls off, the feathers become roughed and the patient has a generally run down appearance.

The most easily distinguishable characteristic of genuine roup is a peculiar and very offensive odor about the mouth and nose. As the case advances a yellwish, cheeselike mass usually forms in the nostrils, growing rapidly and sometimes entirely closing up the openings in from twenty-four to forty-eight hours. Cankerous growths often appear in the mouth, the eyes become feverish and inflamed, often swelling entirely shut, after which tumors sometimes develop, destroying the eye. The patient gradually weakens, and death follows if treatment is not administered.

Upon the occurrence of an outbreak of roup the first thing to do is to take steps to check it as quickly as possible. All affected birds should be at once removed from the balance of the flock to a place that is clean, dry, well lighted, warm but well ventilated and which can be thoroughly disinfected after the disease has run its course. Remove the litter from the houses and disinfect the houses and runs thoroughly with zenoleum, creolin or cresol, mixed according to directions, with a 5 per cent solution of carbolic acid. All the "serums", "guaranteed roup cures" and remedies of various kinds recommended for roup have been tried out and tested practically. But the conclusion reached is that the safest and best thing for any poultry raiser to do is to use all possible means to prevent the disease. This can best be done by breeding from healthy stock, providing comfortable houses which admit an abundance of ventilation and sunshine. The houses and yards must be dry. Ventilation, without draughts, is the best preventive. By all means have an opening near the floor to take out the bad air; if it is nothing but the exits for the fowls left open or covered with wire to permit of a circulation of air. Most people imagine that the bad air in a poultry house is near the ceiling and they make openings there which take off all the pure warm air on winter nights, but the bad air, which breeds roup, settles nearest the floor. In addition to your shutter, curtain or open front, also have small openings near the floor in the front of the house to complete the system of ventilation and to take off the bad air. Be sure the floor and walls of the houses are dry.

About every other day during the damp days of fall and winter the preventive treatment is advised.

Magnesia	4.6
Magnesium sulphate	52.1
Sulphate of iron (copperas)	8.0
Sulphur	14.0
Ground ginger	8.6
Moisture	7.0
Oxide of iron (rouge)	0.7
Other matters not determined	0.5

Tablespoonful to each twelve birds every morning. Feed this in a moistened mash for a few days to the flock if they are attacked with an epidemic of roup, diphtheria, chickenpox, canker, liver trouble, or appear to be out of condition. As the birds show signs of improvement discontinue the remedy until it is needed again. For bad cases of roup make a pill about the size of the end of your finger and put it down the bird's throat Where the bird's eyes are swollen shut it is a good idea to force a little rich, mostened mash down the bird's throat. Also dip the bird's bill into water, if it cannot see to drink. If the bird is thin and low in vitality no treatment will do much good, and the best thing to do is to kill and burn the fowl. The doctoring of sick birds is tedious and for the most part discouraging business. Unless they are especially valuable the axe is the best cure for all badly affected birds. After the nostrils have been thoroughly cleansed by pressing out all the mucus possible with the thumb and finger it is a good idea to dip the head of the bird into a pan of warm water into which you have poured zenoleum, creolin, cresol or some other disinfectant. After the bird's head has dried, take an ordinary sewing machine oil can and inject a little of the following mixture into each nostril: three parts coal oil or kerosene, one part zenoleum, creolin or cresol.

Mix these thoroughly and shake well each time before using. Give this treatment at least once a day. If the eye is affected remove all mucus or cankerous substance and drop a mixture of equal parts water and zenoleum, creolin or cresol or some such disinfectant into each eye. If a tumor has formed about the face beneath the skin open it with a sharp knife and allow it to bleed freely, and press out all the substance which has collected and caused the tumor. Wash it with the disinftctant and water, and then fill the opening with powdered alum.

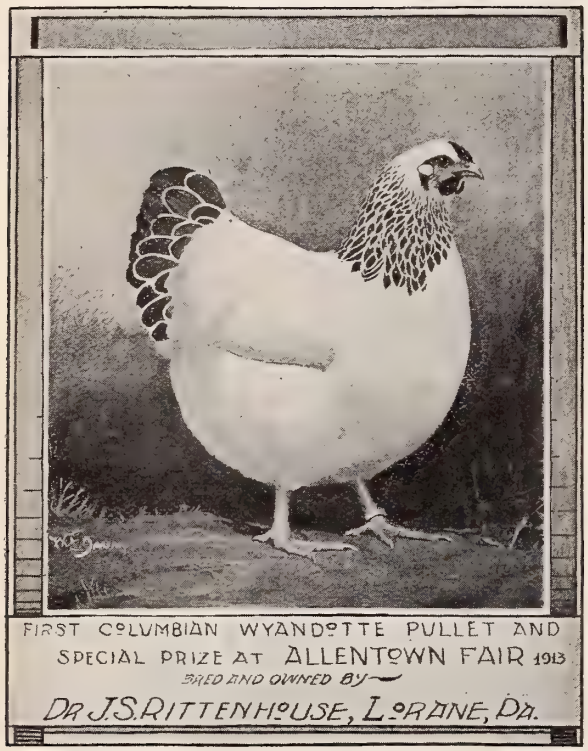
The Benefits Derived From Early Hatching

By E. M. Long, Osccola, Ind.

Josh Billings says,—"The best time to set a hen is when the hen is reddy." But Josh Billings is out of date in these present days of wireless telegraphy and electric incubators. Although the good old maxim was true and probably will remain true as regards the setting hen, we do not have to depend

on her vagaries at present for the time to set the incubator is whenever you get ready to hatch out some chicks. It is not too early now. While more care is required to hatch and raise chicks in February than in May, the extra value will well repay one for the time spent in their care.

There are three lines of thoughts that come to my mind at this time. First the advantage of the early hatched bird in the show room. Second, the larger profit received from the early hatched pullet as a layer. Third, the higher prices received for early hatched chicks on the market. I shall follow up these three lines of thought in turn.



The advantage of the early hatch bird in the show room. My experience is that the April, May and June hatched birds stand little chance in competition with the February and March hatched chicks in the November and December shows. Especially is this true of the heavier breeds, the American, the English and the Asiatics. Most of our shows in the central west are still score card shows. A bird that is a pound or so under weight stands little chance with the bird that is up to standard weight and above, because the cut of one point for each half pound under standard weight puts them out of the running unless there is a great difference in the quality. Then too, often the birds are cooped up and shipped to the show room and the confinement and excitement causes them to shrink from ½ to one pound. The early hatched bird that is a half pound above standard can stand a little shrinkage without any cuts. Then the full feathering of the early hatched bird makes them stand out ahead of the later hatched, even in the score card show. I have noticed in the larger comparison shows, that other points being equal, the ribbons are as a rule given to the larger and more fully developed bird rather than to the late hatched. If you are selling birds for show purposes about the first thing the buyer asks is, "are they up to standard weight?" So it pays from an exhibition standpoint to get them out early.

The larger profits received from the early hatched pullet as a layer. About July or August our hens commence to moult. This process continues until January. That is the whole flock have not put on their new coat of feathers until that time. Consequently the egg production begins to fall off along about August 1st and does not get back to normal, among our yearling or older hens until January or February. Even if the hen completes her moult in November, she does not as a rule, recover her normal laying until a month later. No matter where we may go, we will find a scarcity of eggs during Sept., Oct., Nov., Dec. and January. Prices are reasonably righ to extremely high. If we can get eggs during these months from our pullets, we are bound to receive a good price for them. January, February and March hatched pullets, with good care, will commence to lay in Aug., Sept. and Oct. I am referring, of course, to the larger breeds, as the Leghorns will do better than that. So we can see that the pullets hatched from Jany. 1st to April 1st are bound to pay us if given good care and properly developed. Pullets that are not developed until late in winter, will not as a rule do their best laying before spring.

The higher prices received for early hatched chicks on the market.—For several years I have watched the markets. I have found that, as a rule, it does not pay to sell spring chickens on the market from July 1st to Jany. 1st. At times, during the fall and summer, there is a demand, in a limited way, for heavy fowls, but usually a yearling hen will answer the purpose better than a spring chicken. Chicks hatched in January should be ready to put on the market as broilers by April 1st. I would recommend that all the early hatched cockerels that do not show exceptional quality be sold for broilers, If we are in the fancy poultry business, of course we should hold on to the promising birds. The price for broilers usually holds up until July, although there will be a gradual decline, perhaps after May 1st. This means that all surplus stock hatched in January, February, March and April can be sold at a good price as broilers. If they cannot be sold in this stage better caponize them and hold them over until the following February.

WHITE PLYMOUTH ROCKS---Great Utility and Exhibition Strain

Winners at such leading Shows as Hagerstown, Md., Buffalo, N. Y. Pittsburgh, Pa. and Boston, Mass.
At the late 1915 Pittsburgh Exposition they again demonstrated their winning qualities by defeating many noted blue ribbon winners and capturing cup for best display donated by Western, Pa. White Plymouth Rock Club. Stock and eggs for sale at all times from grand matings. Satisfaction guaranteed. Write for particulars.

Wm. A. Smith, Jr., R. D. 2, Coraopolis, Pa.

Noftzger's Partridge Plymouth Rocks
(The Originator)

Hundreds of grand young stock for sale. Well developed at $2 and up. Cockerels and Pullets. Every one of which is bred from my line breed, pedigreed prize winners. Our Partridge Rocks have always held their own in competition with America's best. High class show birds in Cocks, Hens, Cockerels and Pullets at reasonable prices.

S. A. NOFTZGER, **North Manchester, Ind.**

Partridge Plymouth Rocks---The Utility Fowl

By S. A. Noftzger, No. Manchester, Ind.

The Partridge Plymouth Rocks combining hardiness, quick maturity, splendid size and wonderful laying qualities, is the ideal utility fowl. From the shell to the adult fowl they seem by nature fortified against all enemies.

The younsters appear the same color of nearly all wild fowls—brown. In this respect they closely resemble not only the pheasant, grouse, quail, partridge, prairie chicken, wild turkey, etc., but also a number of domesticated fowls such as the guinea, pea fowl and bronze turkey.

The rule of "the survival of the fittest" seems to have demonstrated the fact that the fowls hatched in shades of brown have had the advantage as these kinds have come to us through the ages of the past. This is certainly proof that there is at least an advantage in this color. From the time the chicks appear and there are enemies ready to destroy them at every opportunity. The color of Partridge chicks is best adapted for protection.

When we recall having seen a clutch of young quail disappear like magic as the mother quail sounded the danger alarm; when we remember hunting among the leaves and grass for the little fellows and seldom found one of them, although there were a dozen or more in sight when we first appeared, then we begin to realize nature's protection in color. Wild fowls owe their exstence to this fortunate color of the young. They would long since have been extinct had not they had the advantage of nature's penciling. Probably in eary times they came in other colors and only those more fortunate survived.

That Partridge Plymouth Rocks matured very rapidly is evidenced by the fact that the six pound cockerel, which was on exhibition at the A. P. A. meeting in August, 1910 was actually hatched on the 2nd day of April and "Chief" 1st Prize Cockerel at Chicago, was hatched April 1st, and weighed ten and three-quarter pounds on December 7th following. Both of these males have proven themselves to be excellent breeders, the former siring some wonderful specimens of both sexes, which goes to show that they were not forced to their detriment and indicates that grand size and quick development are characteristic of the breed.

The true Partridge Rock readily grows to standard Rock size and numerous specimens have been produced which were much above the market. Indeed, most of the males now in my pens weigh one or two pounds over standard requirements while the females are proportionately large. Add to this the true Rock shape, which is one of the most pronounced features of this new fowl, is the ideal one for utility qualities, being unexcelled either for meat or eggs.

As layers of great quantities of nice large eggs Partridge Rocks have no superiors and few equals. The record established in the New York laying contest for 1910 verifies this statement. In competition with fowls of numerous other breeds they won handily, leading all others for over ten months of the year. The six females furnished thirteen hundred and twenty-one (1321) eggs, an average of over two hundred and twenty eggs, while in size the eggs were fully the equal of any in the race.

There were some interesting features of the contest. For instance, during the month of April the pen supplied one hundred and sixty-three eggs, an average of twenty-seven and one-sixth eggs each for thirty consecutive days. Again, during the last three months of the contest, October, November and December, one of the hens laid eighty-three eggs. This is an excellent showing for ninety-two days at the very close of twelve strenuous months. All the females were laying very shortly after the first of the year and on the second day of May the first hen become broody. But two others became broody in June, while one of the hens never showed sign of broodiness.

As mothers Partridge Rocks are especially fine. They seem perfectly suited to rear their young. With just enough game blood in them to make them fearless in defending their brood, they are quiet and gentle to handle by poulterers. They are actually inclined to be tame, readily acquiring the pose of the show room, and promptly responding to kind treatment, showing their appreciation of the same by displaying a sunny disposition and supplying eggs liberally.

For table use this breed excells. For years it has been an open secret that a cross of Indian Game on some other fowl produced wonderful carcasses for the table and since it was a cross of

THE 1915

STANDARD OF PERFECTION

WHAT IT MEANS TO YOU AS A POULTRYMAN

1st. It is the official guide in Judging, Mating and Breeding.

2nd. It contains a full description of all standard bred fowls, including chickens, turkeys, geese and ducks.

3rd. It also contains "full page, half-tone illustrations from idealistic photographs of living birds."

No breeder can afford to be without it. **Place your order now** so as to be sure to get your Standard when wanted. Price: cloth binding, $2.00; leather binding, $2.50, postpaid. All orders filled in rotation. Address

Poultry Fancier Pub. Co., Hanover, Pa.

this kind that was first made to bound this grand new breed it is not to be wondered at that the great table qualities of this breed has attracted attention. With their plump, solid bodies and yellow skins they dross into heavy meaty carcasses, every one "a thing of beauty and a joy for ever", to the housewife. In this respect they stand without an equal.

While the Partridge Rock is without a peer as a utility fowl yet their wonderful beauty stamps them as the coming fowl in popularity. Belonging to the most popular family—Partridge Rock,—possessing utility qualities the equal of any and table qualities surpassed by none, the breed is sure to win the popular approval of poultrydom, as the foremost variety of this most popular family. This is a rare combination of utility and beauty, for beauty, while not a necessity is a final factor in the popularity of a fowl. Wonderous beauty, allied the highest type of utility forms the combination of the new breed which has attracted widespread attention of poultrymen, breeders and fanciers generally.

The appearance and admission to the Standard of a fowl which not only wins the laying contest but which has the vigor and stamina to furnish six pound cockerels of less than five months of age and ten and three-quarter pounds cockerels at eight months, and which will do equally well on town lots or free range, which breeds surprisingly true to type and at the same time earns the name "Beauty Breed", certainly has offered an opportunity never before offered to poultry breeders for a pleasant and profitable investment.

For a fowl, combining exceptional utility and beauty, there is always much demand since this combination offers an opportunity for both profit and pleasure and the American people are ever ready to take advantage of such. Knowing this I began the origination of the breed with a fixed purpose, with a defin te ideal, determined to produce the most beautiful breed with more utility qualities than any known breed possess. Is it any wonder that the breed is surprising all poultrydom with the doings? It is no task to discover why Partridge Rocks are making good, with such great strides, why it is already called the "Beauty Breed" and at the same time stands foremost at the utility fowl of today.

Forging its own way to the front, without being "boomed" this great breed will not only be heard from but is coming to stay, fortified by the union of more great qualities than ever were possessed by one single breed. If, in addition to this, the fact is considered that they reproduce more true to type than any breed ever did at the time of admission to the Standard, then it is easily understood why everyone who gives them a trial is an enthusiastic admirer of them, ready to speak a good word for Partridge Plymouth Rocks.

PRIZE BIRD WAS REARED BY A CAT.

P. J. Connolly, of Courtdale, breeder of single comb Rhode Island Reds carried away one of the ribbons at the Wilkes-Barre poultry show with a cockerel. The bird which one is of handsome type, and those who have stopped to look at it and admire its graceful lines and thorough breeding, perhaps do not know that this bird was reared by a cat.

"Tabby," is the name of a cat which the Connolly family owns and last spring Tabby was found out in the chicken yard fast asleep with a dozen Rhode Island Red peeps climbing about her body. The chicks had lost their mother and they adopted "Tabby." The cat seemed to like the adoption and also adopted the chicks.

Until the chicks were full grown, they were the constant companions of the cat. "Tabby" enjoyed the life and the chicks more than enjoyed her company.

That one from the flock should become a ribbon winner in a show as big as that being conducted here this year is pretty good evidence that "Tabby" made a good mother and that she was careful and cautious in the rearing of her adopted chicks.

QUICK GROWTH IN LITTLE CHICKS

This is the time when many people begin to turn their thoughts again to the little chicks that give us so much pleasure, but sometimes also a lot of grief. I am frank to admit that these little fellows have often given me a hard nut to crack and the more care I bestowed on them the less sometimes they seem to appreciate it. I did not give up though and looked for pointers on raising chicks successfully, wherever I had a chance. I finally discovered that I fed them too much substantial feed and not enough green feed. While I did not exactly reverse the feeding systm I cut down considerably on the grain feed and increased the green feed correspondingly. I noticed a decided change in the death rate until at last they quit dying altogether, became more cheerful and made more progress in their growth, than I had ever seen them do before. At least I thought so. I have given all kinds of green stuff, but nothing has given me better results and nothing seems to me easier to feed and cheaper to produce than sprouted oats. There seems to be some particular nourishment in oats, that is again absorbed by the sprouts, which does more good to the little chicks than any other green feed I have ever tried. Am using one of the Successful Sectional Sprouters; they are the handiest machines to produce this green feed one could use. No trouble or fuss to run them.

I keep on feeding sprouted oats all through spring, summer and fall and of course give plenty in winter to the laying hens. I find by feeding sprouted oats to the growing pullets they begin to lay earlier by about two weeks, other conditions being equal.

Give sprouted oats a chance this spring and see what they will do to your chicks and I am sure that your chicks will give you more enjoyment than grief.

WILLIAMSPORT SETS THE PACE FOR THE WINTER SHOWS, BETTER QUALITY, AS WELL AS THE LARGEST ENTRY, THE SEVENTH ANNUAL, ECLIPSES ALL OTHERS.

Writter for the "Fancier" by James T. Huston.

Hagerstown with its over seven thousand birds, made a record for the Fall Fair season, now comes WILLIAMSPORT with double its entry last year, and six hundred more birds, than at any of its previous exhibitions. It was a foregone conclusion months ago, that Williamsport would win new laurels at this year's show, but few believed it would be possible, with the many reverse circumstances attending the poultry inustry during the past few months, and with the backward season, along with the early date that anything like the success could be achieved.

This with Hagerstown, should prove beyond doubt that the interest in pure bred poultry is fact rooted, and that nothing like war or hard times can put a damper on the "billion dollar industry".

The Williamsport Exhibition had for this years hall one of the finest buildings of the State "The Forney Palace" and one and all agreed that it was an ideal buiding for the character of the exhibition, and many were the words of praise spoken by the visitor for the grand opportunity it gave to show off the fowls to the best advantage. With it's four thousand electric lights, it surely made an impressive sight, to the fifty to sixty thousand persons who passed the doors during the three free days of the show.

Comment on the classes would be an impossibility, as in almost every class the birds were of superior quality, and as Mr. Richard Oke put it "You could take out the winners, and yet have classes that would be good for sore eyes" that is putting it strong, but he meant it, and the same statement was made by ohers.

Twenty Specialty Clubs met here, this together with the Branch meeting of the A. P. A. made a great gathering of poultrymen.

Rhode Island Reds showed two-hundred-and-fifty strong, Cornish, that breed which is coming forward by leaps and bounds, totaed one-hundred-and-eighty birds. White Orps coming back strong in numbers, and in quality the finest in years, Buff and Black Orps, greater than ever, with quality fit for any show. Silver Wyandottes the beauty class of the exhibition, eight cocks, ten hens, thirteen cockerels, eighteen pullets, and four pens, and caused much favorable comment from visitors and breeders alike.

Rocks, as usual strong in numbers, superior quality over other years, in Whites and Buffs, the classes were simply great, and in the other varieties, grand birds, and fair classes.

Wyandottes, are always great here, but this season, the competiion was so keen, that the exhibitors were on the anxious seat from the moment of their entrance into the show room.

Leghorns, always large at Williamsport, came forward with the greatest class in the history of the show, Whites the largest, with the Browns a close second, Buffs also showed well, increasing over last year.

Bantams fair, with water fowl and pigeons, were in numbers than previous years.

Two thousand four hundred and eighty-six birds made up the exhibition, and we do not hesitate, to say, that they were the finest Two thousand four hundred and eighty-six birds it has ever been our pleasure to see.

We are not going to attempt to give credit for teh success of this grand undertaking, all who showed here, and all who came in contact with the hard working Secretary, Mr. Geo. J. Hanks, know that it was through his unceasing efforts, to show the poultrymen why they should show at Williamsport, and be able to "show me" method he has, that brought the entries, and we wish to go on record in saying, that the more men we have of Mr. Hank's ability, stronger and better will our shows become.

Did the "fleas" initiate? ask any who were there.

How did you like the Banquet? Kenner has more in his note book for next year.

We were indeed proud to have Secy. Campbell of the A. P. A. with us, and while his time was to limited, at the same time he made new friends for the organization.

Mr. Frank McGrann together with his manager Mr. Demmy made their first visit to the show, and both voted it was to good to miss, and will show strong next year.

Over two hundred and fifty poultrymen attended the show from distant points and as fine a bunch of men as ever got together at one time, anywhere.

Messers. Oke, Punderford, Smith, Dallafield, and several others gave Mr. Henry D. Schwab a very pleasant surprise, and serinade in his room, one evening during the show, while Henry really appreciated the honors conferred at the same time, the boys should know that Henry believes in the old maxim "early to ber, and early to rise" this did disturb his slumbers.

Mr. Robert J. Walden of Middleburg, Md., with Mrs. Walden spent the entire week at Williamsport, this is Mr. Waldens fourth year, and by this we believe that Williamsport pleases him, and we desire to take this method of stating that the feeling is mutual, as the show would not be complete to us without this Gentleman fancier.

A HELPER THAT HELPS

Dory Lee was one of those jolly girls, always ready to crack a joke or receive one in a god spirit. She had lived twenty years with her parents in the suburbs of a big city. When her father had a steady job in one of the big iron mills, she, together with her school duties, had learned to care for poultry, which the Lees raised in quite large numbers. She had studied them until she had become quite an expert in the poultry line. Dory, or Dot, as she was called for short, the Belle of the little suburb, had many close friends. There was only one that seemed a little nearer than all others, this one was in the person of Jack Derby, a stalwart young man, just one year her senior, who had grown up with her in the village school, but at the age of fifteen years had moved with his parents on to a big farm out in the country and now, at the age of twenty-one years, Jack had realized that though for five long years he had been a constant weekly visitor at the Lee home and passed many a pleasant hour with Dot, that he had never mentioned or hardly given a thought of marriage while in her presence and he quickly awakened to a sense of duty and resolved that not another day should pass before he should know Dot's idea of the matter. These thoughts had come into his head while he was dodging along one beautiful Sunday afternoon toward the Lee home. On his arrival he was greeted at the door by Dot, with the remark, "Hello Jack", you look rather solemcoly, what's on your mind". "Well, Dot," he said as they took seats in the little Lee parlor, "I've got two questions to ask you." "Well, I don't know as I can stand more than one at a time, but of course it depends on what they are, if not too hard, you'll get your answer straight from the shoulder, the way you say you always like answers, so let's have the two in a chuck". "Well, Dot, will you marry me and do you think you can make good on a farm". "Yes," she jerked out before his words were hardly finished. This brought from Jack—"But why did you answer so quickly." "Oh, I guess, Jack, it was because I was afraid you might withdraw the first question". "Oh you litle joker, Dot," he said, as he placed the official seal on; no, not on paper, but on the lips that had so jokingly given him the answer, (now don't get scared, dear reader, this is not a love story, but you know business transactions of this nature would fall flat if not well tinctured with love). Four weeks later we find that Dot had kept her promise as to the first question. She had taken Jack Derby for good or bad, no, no, I haven't, she said, I've taken him for good, there's not an ounce of bad in him. One Sunday afternoon, not many weeks after their marriage, after disposing of a fine chicken dinner at Father Lees, as Jack withdrew from the table, he suddenly broke out in a jovial manner. "Say, Dot, there's something we've forgot." "For pity sakes, what?" she said, not suspecting his joke. "Why, we forgot to go on a honeymoon trip." "Oh, yes, Jack, she piped in, well, its not too late, supposing we run out and inspect the little farm that I bought last fall and call it our honey moon trip". "All right, Jack, nothing could suit me better". So off they hustled to what was to be their future home. On arrival, seeing the nice surroundings, Dot cried out, "Just a paradise, Jack, and this is the place I am to make good, well, you bet I'll do it". Dot had found, that Jack in purchasing the farm, had agreed to assume a mortgage of $1,000, which incumbered it, and she had thought of a scheme of her own regarding it but hadn't even hinted it to Jack, but while looking around the premises, which were now vacant, they came to a little lot of one-half acre. Dot said, "Jack, you know I'll need a little pin money, supposing you let me use this little lot to build a chicken house on and keep some chickens in." "Well, alright, its a good scheme, you can use this patch for what ever you like and no one shall dictate to you a word," and while Jack went back on the farm to look over the fields, Dot sat on the porch of the vacant house and planned to cary out her scheme. Yes, she even planned out loud and was saying, "Now, I have that $150 that Grandpa Lee gave me for a wedding present, I'll just build a nice chicken house and there'll be enough left to buy some fine stock. That's what I'll do, and say, why can't I advertise and sell eggs and stock—sure, I will, that's the stuff, and I'll go after that mortgage unbeknown to Jack. Say, won't that be great." Just then Jack came back and heard her voice, for fortunately, not what she said, but he surprised her by blurting out—"talking to yourself, Dot, to keep from being

POULTRYMEN! Plant Your Extra Space to Strawberries
They pay much better than poultry and you can deliver the berries as you deliver your poultry products. There is an ever increasing demand for the very best strawberries, and high prices are easily obtained. One man made
$200 from One-Fifth Acre—and did it in spare time, too. But for certain profits you must set out plants that are hardy, prolific and bear fruit *true-to-name*. They should reflect years of study and selection, in large luscious fruit and vigorous foliage. Such are Allen's plants. Small spaces planted to them will yield profits that will suprise you—greater by far than poultry profits. Solicit your present customers and you will see what a ready market there is for good berries. Allen's plants are the result of 30 years' scientific culture. They comprise all the early and late strains of standard worth-while varieties of small fruits for every climate and soil requirement. We devote over 200 acres to the culture of small fruit plants and thus can guarantee you *prompt shipment of fresh stock* in *any quantity*.
Buy Allen's True-to-Name Plants
and you are better assured of large crops of big, delicious strawberries—that bring top-notch prices. All of our plants are carefully selected and packed *fresh* for shipment, and *guaranteed true-to-name*. They are fully described in Allen's 1915 Book of Berries, which should be in the hands of every poultryman who would take advantage of a market that fairly calls him to big extra profits. This book lists Allen's *True-to-Name* Strawberries, Blackberries, Raspberries, etc. It is well illustrated and gives the latest and most successful cultural methods. It's free. Write *today* for *1915 Berry Book*.

Jacobus Campine If you wish to win at the most important shows, as the customers of Jacobus do, what should you do?

M. R. JACOBUS, (original introducer) Box 3-P., Ridgefield, N. J.

lonesome. Well, I've been gone quite a while, that's true". But she stopped him with, "Say, Jack, when will we move". "Oh, next week, I guess". "All right, I'm just crazy to get into my chicken business and plant flowers, etc. Say, Jack, you know Granpa gave me that $150 for a wedding present, well, I'm going to build a nice chicken house and buy some pure bred chickens with it." "All right, was all the answer he made," and the next day she slipped down town and let the job to a carpenter to build a house and fence off yards for $100, the same to be finished and ready for occupation in one week, and when one week later, Jack and Dot turned in to the gate at their new home there stood a new chicken house, complete with nice yards, surprising Jack out of his wits and he cried out, "Well, Dot, you're a hustler, sure, and he reached over and placed on her lips another of those official seals, but luck was coming her way fast, for just as they drove in, the post man came along with their country paper which she grabbed eagerly and running over the ad columns, she read one ad as follows: "For sale, 30 pure White Orphington hens and three males, fine stock, cheap if taken at once. Moving to city, must sell. John Eastie, Dorrville, Pa., Route 2." "Why, that's our next neighbor," said Dot, and in her glee she fairly shouted, "Oh, I'm going after them" and while Jack was caring for the horses and doing odd chores she slipped over and bought the birds for $40, (and with her experience she saw at once that they were exceptionally fine), to be delivered that next night and placed in their new coop. Next morning, Jack thought he heard a rooster crowing in the yard and hustled out (with Dot feigning sleep) to find a lot of beautiful Orpingtons in the new house and while trying to study out how they came there, Dot's clear voice rang out, "ho, Jack, get out of my chicken house." He looked around but saw no one. "Well, she's a corker, sure," he said. "She knows how these chickens came here but I don't and I promise not to dictate. She's working out some scheme that's going to bring her pin money good and plenty all right". When coming in to breakfast, a half hour later, he remarked, "a fine lot of Orps, Dot, they must have come on the midnight train". "Yep", said Dot". Litle was said from then on about the Orps as Jack was very busy with his crops, but by late fall, Dot with her hustling and wise planning, had some 500 fine young Orps growing to maturity fast, and with her remaining $10, she advertised her birds in the Poultry Journals and in due time a gentleman came from New York and wished to buy all her young stock. Dot knew she had a fine bunch and seeing the man wanted them badly, she put a price on them accordingly and a sale was made totaling $1200. Dot was so elated over her extremely successful operations that the night after her chickens went away and she received her cash, she could not sleep but with a full resolve to carry her scheme to completion, she did not even let Jack know that her chickens went to market. She even ventured the remark to Jack that her chickens weighed well. She now sought out the man that held the mortgage, paid it in full, went to the county seat, had it cancelled, and carried it home in triumph and as she turned homeward, she said to herself, "Is it possible that all within a few months, I have alone handled and without assistance cleared our home of $1,00 debt and all while Jack worked hard in the field, yes, its too good to believe, but its true and I'm happy." But she said not a word to Jack. A month later he scratched enough to pay half the mortgage and the interest and hustled over to pay it, but, ah, Mr. G. said, I have no mortgage on your place, a lady paid it all up a month ago. Thunder struck, Jack said as he hustled back home, can it be that my little joker of a wife has done this, it can't be, but how else I shall soon know, and as he drove in the yard, Dot met him and piped up, "say Jack, my young pullets laid six eggs to-day," "that's nice," he said, but who paid the mortgage. "Oh, Jack, I had money from my chickens to pay it so one day I did it. I wanted to be a helper". "Indeed, you are one in a thousand, a helper that helps," and he soon had her in his arms, again placing the official seal on the lips that had told him a year ago that she'd "make good on a farm."

POULTRY RECORD TAKES OVER POULTRY JUDGE.

The Poultry Judge, a monthly poultry journal established about a year ago and published at Chillicothe, Ohio, has discontinued publication and the subscription list has been taken over by the Poultry Record.

Book
of the
PLYMOUTH ROCKS
144 Pages
3 Color Plates

Edited by W. C. Denny. Illustrations by Shilling and Sewell. The greatest book ever written on Plymouth Rocks. A book compiled by America's most noted breeders, dealing with all the Rock varieties. You can't successfully breed Plymouth Rocks without this great book. PRICE, $1.00 Postpaid.

POULTRY FANCIER, HANOVER, PA.

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N. Y., has discovered a process of making a new kind of paint without the use of oil. He calls t Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather proof, fire proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

DESTROYS VERMIN.

This paint is a strong disinfectant and effectually destroys disease germs and vermin. On this account it is especially valuable for the interiors (as well as exteriors) of Poultry Houses, Basements, Stables, etc.

Powdrpaint is made in White and 20 non-fading colors. It does not rub or flake off, but wears practically for all time on interior surfaces. White Powdrpaint is the whitest paint in the world and it stays White.

Poultrymen and Dairymen who once give this paint a trial and learn how much better and cheaper it is than whitewash and all such inferior preparations, use nothing else for purposes where Powdrpaint is adapted. Shipped to any part of the U. S. freight prepaid, if you order 100 lbs. or more.

Write to Mr. A. L. Rice, Manufacturer, 258 Wardwell St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write today.

Law Should Stop Sale of Leg-Strap and Spring Trusses

Wrong To Buy Anything For Rupture Without Getting 60 Days Trial

Denpending on leg-strap or spring trusses—like shown below—is little less than slow suicide. They are almost sure to shorten your life It's next to impossible to make them hold without hurting.—They are simply a curse to wear.

Away With Leg.Strap and Spring Trusses.

So far as we know, our guaranteed rupture holder is the only thing of any kind for rupture that you can get on 60 days trial—the only thing we know of good enough to stand such a long and thorough test. It's the famous Cluthe Automatic Massaging Truss—made on an absolutely new principle—has 18 patented features. Self-adjusting. Does away with the misery of wearing belts, leg-straps and springs. Guaranteed to hold at all times—including when you are working, taking a bath, etc. Has cured in case after case that seemed hopeless.

Write for Free Book of Advice—Cloth-bound, 104 pages. Explains the dangers of operation. Shows just what's wrong with elastic and spring trusses, and why drugstores should no more be allowed to fit trusses than to perform false and misleading names. Tells all about the care and attention we give you. Endorse-operations. Exposes the humbugs—shows how old-fashioned worthless trusses are sold under ments from over 5000 people, including physicians. Write to-day—find out how you can prove every word we say by making a 60 day test without risking a penny.

THE IDEAL FEED TO MAKE HENS LAY IN WINTER.

All of us poultrymen with years of experience behind us know very well in order to make our flocks pay us the biggest profits through the market egg channel we must make them lay plenty during the winter months, when one dozen eggs bring as much as two or three dozen in spring and summer.

You and I also realize that to do this successfully it is necessary that we feed our hens other feed stuff than just corn and wheat, keep them comfortably housed and provide them with sufficient drinking water.

I have fed all kinds of grain in different ways and gave them all the care I knew how including different kinds of green feed such as cabbage, potatoes, mangels, beets, etc. but nothing that I have ever tried, produce such abundant returns as the feeding of sprouted oats. Sprouted oats seems to be more relished than any other green feed and I am also convinced that it contains to a more extent the elements to keep the hens in good condition and make them lay than any other addition to the grain rations I had provided for my hens.

Oats in a raw condition are good for an egg making feed, but are not liked very well by the hens. Raw oats are also often the cause of hens getting croup bound. Now with the help of my mental sectional spreading machine I can easily convert this hard digested egg feed into the finest and juciest green feed imaginable. When sprouted it goes further, is a positive health regulator, is cheaply produced, requires little time and what is most important the sprouts absorb the nutritious elements found in oats. Since feeding sprouted oats there are no more disappointed egg gathering expeditions to my hen house and I hope that these lines will induce other poultrymen to get in line and give their hens what they need and I am sure no more complaints will be heard as to unproductive hens.

'DOLLAR HEN"

"One of the Most Practical and Best Books"

John L. Coburn, Secretary of the Agricultural College, of Utah

"Experience is a dear teacher." It is therefore to your interest to profit by the experience of others. Milo M. Hastings, formerly in charge of the poultry investigation of the United States Department of Agriculture, has probably had greater experience and opportunity for observation than any other poultryman in America. He has written the book, "The Dollar Hen," in which his experience and observations are recorded for the benefit of you, who should not pay the price of experience in order to learn the way aroupd the innumberable pitfalls. The maelstrom of misinformation is fatal to the unwary poultry raiser. Why not know, when knowledge is so easy and cheap to acquire? Read what one agricultural college thinks of

"THE DOLLAR HEN"

Agricultural College of Utah,
Logan,, Utah, Feb. 1, 1912.
National Poultry Pub. Co.,
Syracuse, N. Y.,

Gentlemen—Yours of the 27th ult., regarding poultry books at hand. In reply to same, beg to state that we expect to use the book, "The Dollar Hen," in our poultry classes at this institution. In looking same over will say that this book appears to be one of the most practical and best books on the market at this time.

Very respectfully,
(Signed) JOHN L. COBURN,
Secretary.

Until we know from personal experience the vaule of a book, we must judge its worth from what those say who are capable of recognizing the good among so much that is worthless. We cannot ignore such commendation as that contained in the letter above.

For Only $1 you can secure "The Dollar Hen" and one year's subscription to the Poultry Fancier. Either book or magazine is worth more than the price of both. Send your name now.

EXTRA SPECIAL OFFER

TO

Classified Advertisers

The season is again here when you must decide in what Journal you intend to place your classified advertising in order to secure the best possible results from your investment. We are therefore appealing to you, in behalf of the Poultry Fancier, and submit the following reasons why we believe it will be to your interest to use the Poultry Fancier as an advertising medium through which to dispose of your surplus stock and eggs during this season.

First; the Poultry Fancier meets the approval of every fairminded poultryman, on account of the principles for which it stands.

Second; the Poultry Fancier reaches every section of the United States, Canada and many foreign countries, and its circulation at the present time is increasing by leaps and bounds. Everyone of our subscribers is a live, wide-awake poultryman or poultrywoman, who is interested in the highest welfare of the poultry industry in this country. Without question they will prove a valuable asset by way of increasing your business through orders for either eggs or stock.

Third; the Poultry Fancier is no experiment—it is the poultryman's friend and its aim has always been to aid every man and woman who raises chickens, along every possible, honorable line. In other words, the Poultry Fancier is published in the interests of the rank and file of poultrymen. Again, we own our own equipment and therefore, can give you better value for your money than almost any other poultry journal published in this country.

Now Here Is Our Proposition

A 30 word classified ad, 3 months, right in the heart of the season, for $3.00, the regular price is $5.40; or we will give you a 30 word classified ad, 6 months for $6.00, regular price $9.00; or a 30 word classified ad, 12 months for $11.50, the regular price $18.00. All words in excess of 30, will be charged at the regular rate of 6 cents per word per each insertion on a 3 months ad, or 5 cents per words on each insertion for 6 months or 12 months ad.

Write your name and address plainly and keep us informed from time to time just what results the Fancier is bringing you.

POULTRY FANCIER PUB. CO., HANOVER, PA.

Great Orpington Truths

No breeder can sell you better stock at the price.
No breeder can sell you stock at a lower price.
No breeder can render you greater satisfaction.
We can please you in

BUFFS BLACKS and WHITES

In old and young stock. For further particulars write

R. C. BUFF LEGHORN CLUB HAS SUCCESSFUL MEETING.

Dear Member:

The regular meeting of the Rose Comb Buff Leghorn Club of America was held at New York, Dec. 2, 1914, in connection with the Palace Show.

The meeting was called to order by the President at 4 P. M. The minutes of the last annual meeting were read and approved, and plans were layed out for the coming year.

All regular officers were re-elected. J. D. Pearce, Altoona, Pa., elected 1st Vice President. There were also some changes in State Vice Presidents. G. F. Searfoss and J. L. Henderson of Pittston, Pa., and Jos. P. Sweetser of Scranton, Pa., were admitted to membership at this meeting.

It was decided that each State Vice President should work in connection with the Secretary-Treasurer to increase the membership of their respective states and to get all breeders to support at least two good shows in each state as well as to work up interest in the local shows.

We feel that the Rose Comb Buff Leghorn breeders should make a special effort to bring this fine breed to the notice of the public.

Our breed has made great progress in the last ten years. In color one must show clear buff in females free from peppering in wings and tail, as it is nothing to see full strings clear in every section at the larger shows as well as many of the local shows.

Let every man BOOST the Rose Comb Buff Leghorn for 1915 and see how many new members we can add to the Club. In 1914 we secured a good list of new members, let us double it this coming year. Remember BOOST.

Fraternally,
Howard J. Fisk, Sec'y-Treas.
Wm. J. Peck, Pres.

DO YOU WANT TO MAKE MONEY?

We Have a Golden Opportunity to Offer

We want a first class representative in every locality to represent the Poultry Fancier. Our proposition for the season of 1914-1915, is the most liberal we ever made. Get a going now. Write for particulars today. Make money while you have the chance.

Poultry Fancier Pub. Co, Hanover, Pa.

Vitality

is imparted to your whole flock by the wholesome, invigorating effects of

Pratts Poultry Regulator

Its use makes more eggs, a greater per cent fertile, bigger hatches, stronger chicks. **Satisfaction Guaranteed or Money Back.** Refuse substitutes; insist on Pratts. Increases your profits and saves you money.

Pkgs. 25c, 50c, $1.00; 25 lb. pail $2.50.

Liberty Bell Bird Club Work in the Schools

By Lida May Briggs, The Farm Journal, Philadelphia

We have a small tree without leaves in the corner of our room, with a dozen different kinds of nests in it. On one side of the tree are pictures of birds in natural colors; on the other, pictures of birds' eggs in colors, and natural size. We are going to make bird houses like the pictures you sent us.—Persis M. Robinson, Concord, New Hampshire.

We have had many bird walks and bird talks, also picnics, and how the children do enjoy it all. I will continue giving lessons and talks for half an hour in each of the different rooms of our school.—Amanda Bair, N. Yakima, Washington.

The children have tried composing some rhymes about the birds. They have collected money for the pennant and pictures and are saving more so they can buy something else that has to do with birds.—Marguerite S. Ritchie, Paradise Annex, Middletown, R. I.

One day for language work I had the class find out all they could about birds, from various sources. The pupils were so enthusiastic in doing this they forgot all about being tired or sleepy. So after this, since the children are so interested we are going to take up more about birds.—Geo. A. Reinert, Bowmansville, Pa.

I am very much interested and have already received a small supply of grain from the children preparatory for our winter birds.—Helen L. McCutcheon, Sanborn, N. Y.

I believe that through your efforts our rural pupils will be taught one of the most important parts of elementary agriculture.—Mrs. C. O. Romeo, Cincinnatus, N. Y.

Our interest in the Liberty Bell Bird Club work increases steadily. We study birds in connection with agriculture on Friday afternoons.—Sibbel K. Hall, Louviers, Colo.

The boys in my room made bird houses during their manual training period. Before beginning we talked of the part each one can and ought to take in this work.—Carrie J. Shaw, Port Norris, N. J.

I shall encourage as many of our pupils as possible to join the Club.—Jas. T. Gillespie, Kanima, Okla.

There is need of much such work, especially in the country where too many young men shoot anything they can find, either birds or wild animals. —Clara Remley, Marble Rock, Ia.

A sample copy of your Farm Journal came today, and as I teach the 6th grade, I read them the "Sea-Gull Monument", and we formed a Liberty Bell Bird Club of 37 members. We are to build bird houses in my yard Saturday afternoon and watch anxiously for our buttons and CLUB NEWS. We are live wires and thank you for an opportunity to help our feathered friends. —Mrs. Lottie Phillips, Blackwell, Okla.

Our 5th and 6th grades have organized and have meetings every Friday. The 31 members are very enthusiastic about the work and have made quite a collection of nests—Louise Sticker, Perry, Kans.

The results of the Bird Club organized last year were very gratifying. Many of the members erected bird houses and were rewarded by having birds build nests in them—M. Wade Phillips, Montrose, W. Va.

BACK TO THE RESERVATION.

Miss Sophia Pitchlynn, known throughout the poultry world as the Indian Princess, of Washington, D. C. and also known as one of the most successful breeders of Brown Leghorns in the country, has decided to go West to the tribe of her forefathers. She will be accompanied by her brother, Lee Pitchlynn, who is also known by nearly all poultrymen throughout the Eastern Field. She will devote her time to teaching the Indian children of her tribe how to raise poultry. The many friends of the Pitchlynn's in the East will be sorry to see them leave, but we all wish them success in their new work.

ROSE COMB BLACK MINORCA CLUB.

The International Rose Comb Black Minorca Club met with the Tri-State Poultry Association at Toledo, Ohio, first week in Dec. and elected the following Officers.

H. A. Kister, Baner, Mich, President.

Mrs. Cora A. Shoemaker, Granville Summit, Pa., Vice-Pres.

E. M. Campbell, Columbus, Ohio, Secy.-Treas.

Directors, Mrs. Chas. G. Trsk, Independence, Iowa, Ross Swartout, Cainsville, Ontario, A. M. Moody, Boston, Mass., Phillip J. Minch, Cleveland, Ohio.

They have landed the illustrating of the Rose Comb Black Minorcas which will be in the 1915 Standard.

All members report the Minorca business booming and the new officers aim to make this a banner year.

Very truly yours,
E. M. Campbell,
Secy.-Treas.,
571 N. Fourth St.,
Columbus, O.

LEG BANDS

Standard Sizes of THE IDEAL ALUMINUM LEG BANDS. 2, Pigeons; 4, Hamburgs & Polish; 6, Mediterranean; 8, Americans; 10, Asiatics

IDEAL.

This band has a double clinch, making it more secure than the single clinch style. In fact, when properly put on it is sure to stay there until purposely removed.

Ideal bands are made in 5 different sizes as per accompanying illustration, and numbered with raised numbers. State size of bands wanted with order.

DIRECTIONS.

First raise clinchers to a point, than form band over the finger, in as true a circle as possible and after band is applied to the fowl's leg, fasten by pressing clinchers down firmly as shown in cut.

Prices Prepaid.

Numbered to order, 12c per doz., 65c per 100.

Poultry Fancier, Hanover, Pa.

DOUBLE QUICK GRAIN SPROUTER

THE PERPETUAL POULTRY SILO—Grows Green Feed While You Wait

The First, the Original, the Pioneer of All Grain Sprouters

The Double Quick Originates and introduces, others imitate and follow. Fully **100 Double Quicks** to every **half-dozen of all others** combined. Now in its **fourth** year; in use in every state and territory and several foreign countries; many large poultry farms use from one to five. "I am enclosing my check for **two more** of your No. 5, Double Quick Sprouters. The one I bought some weeks since is doing fine work."—C. H. Latham, Beauty and Utility Barred Rocks, Lancaster, Mass. "I ordered your No. 5 Double Quick Sprouter shipped to Maud L. Kaler, Columbia City, Ind. This one is proving so satisfactory that she wants another one of the same size and therefore you will find draft for this second sprouter."

Eggs—$2, $3, $5, $7 per 15; $10 per 100.

W. W. KULP, BOX 60, POTTSTOWN, PA.

Rabbit Culture and Standard

The best book ever published on Rabbits. Just what all the breeders are waiting for. It is the last work of the late Dr. Roth, finished by Charles T. Cornman, Editor of The Poultry Item.

The Only Official Standard

of Belgian Hares and every variety of Rabbits ever published. Profusely illustrated.

Every Variety Described and the Official Standards Given

It is full of information from cover to cover that is worth dollars to breeders of Hares and Rabbits. It effectually covers the subject of Feeding, Breeding, Housing, Diseases and their Remedies, Selection of Breeders and Judging, and is the only book published, giving the official standard of every variety. It will be the same to rabbit breeders that the American Standard of Perfection is to poultrymen. Every breeder needs one, and every breeder will eventually have one. **The price of the book is only 50 cents, with paper cover; $1.00 bound in cloth and $1.50 with flexible leather binding.** We can furnish it promptly on receipt of price.

GET 155 CHICKS FROM 155 EGGS.

"I put 155 eggs in the Progressive Incubator and when the hatch was complete I found that it had hatched every fertile egg," says Mrs. John Opperman of Botkins, Ohio. This letter is, we are informed, typical of hundreds recently received by the Progressive Incubator Co. of Racine, Wis. The dead air cell construction and thoroughly modern equipment of this old reliable incubator is evidently showing up big in results. Convincing proof that the makers of Progressive Incubators believe in their product is furnished by the fact that they agree to refund full purchase price, with 8 per cent interest, if any of their incubators or brooders fail to give satisfactory results.

WHAT OUR FRIENDS THINK OF BIRDS SHIPPED ON OUR CO-OPERATIVE PLAN.

Stevens, Pa., R. F. D. No. 2.
Nov. 27, 1914.

Poultry Fancier Co.,
Care of F. D. Sutton—
Dear Sir:

I received the White Orpington cockerel in nice condition and must say I am more than pleased with it.

Yours,
Waren E. Leininger.

MARK YOUR CHICKS

Always Ready for Use

Perfectly Harmless to Chicks

Pettey's Punch is one of the best on the market. You can't get along without one. Price 25 cents, or sent free to any one sending us one subscriber at our regular rate of 50 cents a year.

Poultry Fancier, Hanover, Pa.

Why Risk Losing Your Chicks?
THIS BROODER WILL RAISE THEM

It is poor policy to trust your valuable flocks of chicks to brooders which have not been widely and thoroughly tested by practical chick-growers. Fortunately, you are not compelled to risk disaster. Simply use "the brooder that made good" in the hands of thousands of poultrymen—experts and amateurs—during the last two seasons. It will surely make money for you, too. The

Newtown Giant COLONY BROODER
Coal-Burning, Self-Feeding, Self-Regulating

is not an experiment, not a machine of unknown quality. It has publicly demonstrated its wonderful efficiency in the most conclusive manner. Let "the other fellow" experiment if he can afford it, but pin your faith on the tested brooder that raises the most and best chicks with the least labor and at lowest cost. **That's the Newtown!**

Proof of these strong claims appears in our new Brooder Booklet. Send us your address today and we will mail you a copy free.

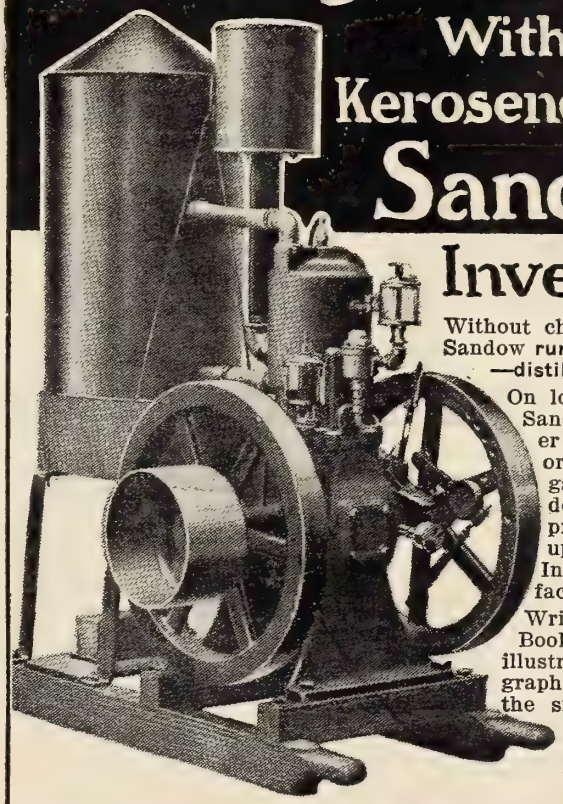
Save 2/3 Fuel Cost With A Kerosene Burning Sandow



Investigate!

Without change of equipment, the Sandow runs on kerosene—gasoline—distillate—or alcohol.

On low priced kerosene, the Sandow delivers more power per h. p. of rating, than ordinary engines do on gasoline. With the Sandow you can save the price of your enigne in upkeep economy alone. Investigate! Get all the facts.

Write for Free Sandow Book, which shows you by illustrations from photographs why the Sandow is the simplest engine made—the easiest to run—the most free from trouble and repair expense.

Only 3 Moving Parts

Starts at 40 degrees below zero. Starts without cranking—runs in either direction—throttle governed—hopper and tank cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—light weight—can easily be taken anywhere for work—complete ready to run.

THERE'S A SANDOW FOR EVERY FARM

Made in all sizes from 1½ H. P. to 18 H. P. Have a Sandow to meet your needs—do the work you want done at greatest economy. Sandow will do your pumping—run your feed grinders—your cream separators—do all the stationary power work of farm or shop, and save you more money than any other engine on the market. Sandow is not just an ordinary engine. Special design for kerosene fuel means more simplicity, greater durability. Send for Free Book and judge for yourself.

TEN YEAR IRON CLAD GUARANTY

Absolutely protects you—Sandow must make good on every claim. It is because Sandow is making good every day on thousands of farms that we can make this iron-clad, binding guaranty. Users everywhere will tell you how Sandow saves fuel—saves trouble—saves repairs—and can be depended on for power all the time.

FREE TRIAL ON YOUR FARM

Book gives our Free trial proposition. Use the Sandow every day 30 days on your own farm. If you don't say it is the most economical and most powerful farm engine you ever saw—if it does not satisfy you every way, send it back and we will refund every cent you paid for it.

SPECIAL LOW PRICE DIRECT TO YOU

Just compare these rock-bottom prives for Sandow Engine, with those of any other engine manufacturer, and remember Sandow quality is unsurpassed. Sandow prices are: 1½ H. P. Bull Pup Engine, $33.75; 2½ H. P. Sandow, $42.50; 4 H. P. Sandow, $65.00; 6 H. P. Sandow, $95.00; 8 H. P. Sandow, $140.00; 12 H. P. Sandow, $250.00; 18 H. P. Sandow, $385. We have no agents—no jobbers—no middlemen—no dealers. You buy of us and keep all the middle profits and commissions in your pocket. Before you get any engine, be sure to have our low figures and see what you can save.

SEND FOR FREE SANDOW BOOK

It is full of plain facts on the farm engine question—illustrated from cover to cover with pictures from photographs showing the simple construction of every part of the Sandow—contains the letters of users of the Sandow. Remember it costs you nothing to get the facts—does not place you under any obligation whatever. Write today. A postal brings the book. Address

Here It Is!

Belle City Incubator

21 TIMES World's Champion

Jim Rohan, Pres.

I ship quick from Kansas City, Minneapolis, Buffalo or Racine.

Belle City Hatching Outfits entered by owners last year in *competition with all other machines* took 13 prizes out of 28 awards. These added to the 8 World's Championships which the Belle City already had, make it the 21 Times World's Champion Belle City. Full account of 21 prize winning world's championship hatches given in my new free book "Hatching Facts." Send for it.

Get the whole wonderful story. Also stories of multitudes of men and women scoring high percentage and perfect hatches with the Belle City. 327,000 are now in use.

The book tells how Belle City Hatching Outfits are made—shows machines in actual colors—photographs, of prize winning hatches—gives my ten-year money-back guarantee—my low price and one-, two-, three-months' Home Test—*freight prepaid*—full particulars of

My $800.00 Cash Gold Offers

Greatest chance you ever had to make money with a hatching outfit. You don't have to have *any experience whatever.* Don't let any one get the start of you. Free Book tells you everything you want to know. Jim Rohan, Pres.

Tobacco Habit Easily Conquered

A well-known New Yorker of wide experience has written a book telling how the tobacco or snuff habit may be easily and completely banished in three days with delightful benefits.

The health improves wonderfully after the nicotine poison is out of the system. Calmness, tranquil sleep, clear eyes, normal appetite, good digestion, manly vigor, strong memory and a general gain in efficiency are among the many benefits reported. No more need of that nervous feeling; no more need of pipe, cigar, cigarette or chewing tobacco to pacify the morbid desire. The author, Edw. J. Woods, 534 Sixth Ave., 979 E, New York City, will mail his book free on application.

An Exhibition Strain of Heavy Layers

EGGS---$5 per 100
$40 per 1000

F. I. Bradford, Troy, Pa.

Huston's "Ideal" Barred Plymouth Rocks

make new history at the Cleveland, Ohio Exhibtion, week of Jan. 4th, 1915. Winning in a hot class 2nd cock, 1st and 5th hen, 2nd cockerel, and 1st pullet. At Buffalo, N. Y., Thanksgiving week, they won 2nd cockerel, and 5th cock (owing to the quarantine existing in Erie Co., N. Y. I forfeited all entries made, with the exception of these two males). At Pottsville, with birds shown there only, I won 4th cock, 2nd and 3rd hens, 2nd and 4th cockerels, 1st and 4th pullets, and 1st exhibition pen.

My Mating List is ready, and I am prepared to send out eggs from the finest matings I have ever had.

$5.00 for 15 eggs, $9.00 for 30 eggs, $25.00 for 100 eggs. I defy any breeder in the LAND to show more carefully mated pens, than those I have in my yards for the season of 1915.

Write me to book your order, send the remittance on date set for delivery.

Close-to-Nature Open Air Hover

The Longest Portable Hover Now Advertised

Five feet long, warmed evenly by heater on inductive principle. Applies the three CLOSE-TO-NATURE principles—CONTACT-WARMTH, like the hen; Open Air Ventilation, not hot air; NON-PILING OR OVERCROWDING.

Combines the FIRELESS with the LAMP. Use the lamp for very young chicks and discard it as they grow older; or use the lamp during the daytime but extinguish it when they cluster for the night.

Hinged for easy cleaning and airing. Roosting bed of earth or litter. Perfectly sanitary. Brooders on the same principles. Nothing like these brooders and hovers now on the market. Don't buy till you have read the Close-To-Nature circular. It is free. Very low prices this season.

Close-to-Nature Co., 76 Front St., Colfax, Iowa

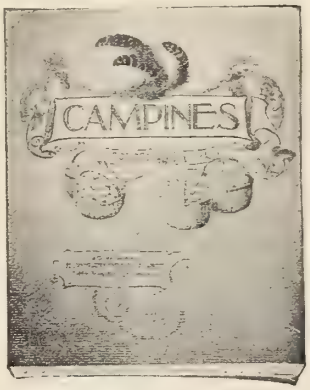
CAMPINE BREEDERS, ATTENTION PLEASE.

Breeders and admirers of the Campine fowl will welcome the news that the Reliable Poultry Journal Co.'s new Campine Book is now ready for distribution.

Not in many years has there been added to Poultry Literature a work which so holds the reader's interest, or which is so full of genuinely usuable



information upon the beginnings and progress—the mating and rearing—of the breed of which it treats.

This book should be in the hands of every fancier and breeder of Campines, as well as every poultry judge. The articles from the pens of Rev. E. Lewis Jones and Louis Vandersnickt give a new insight into the history and care of Campines. The illustrated articles on Campine type by Artists F. L. Sewell and Arthur O. Schnilling make plain to the merest novice the requirements for the improved Campine, while the leading breedrs of the present have contributed articles of lasting worth and interest.

The book has been ably edited by F. L. Platt, one of the acknowledged world's authorities on Campines. Mr. Platt has himself also contributed articles on Campine History and Progress and upon the characteristics of the present-day ideals.

Not least of the book's attractiveness and value are the many photographic portraits of Campine fowls, and a beautiful colored painting by F. L. Sewell, showing pairs of both the Silver and Golden varieties.

Price of "The Campines," 75 cents a copy, or $1.00 with a year's subscription to the Poultry Fancier. Address all orders to Poultry Fancier, Hanover, Pennsylvania.

ENGLISH 200 EGG STRAIN

World's Champion Layers

S. C. White Leghorns, White Wyandottes, S. C. R. I. Reds, Buff Orpingtons.

EGG COMPETITION WINNERS

BRED-TO-LAY

BARRED PLYMOUTH ROCKS

That Fill the Egg Basket.

Have Produced Some of the World's Greatest Layers

Ten daughters of Liberty Bell have laid 2014 eggs in one year. Circular free.

O. F. Mittendorff, Box G, Lincoln. Ill.

By CO-OPERATION We

Save money and give our customers the benefit of it.

With ten best breeds on free range, one variety on a farm, and a good caretaker at their head. We are able to offer eggs for 1915 from finest stock at prices that will surprise you. We don't want the whole world, just part of it. White Rocks, Brd. Rocks, Buff Orps., White Orps., Anconas, White and Buff Leghorns, S. C. Reds, Rose Comb White Orps. and White Runner Ducks. Our folder tells how, by economy and co-operation we sell best eggs at lowest prices. And say, don't forget to ask for our Christmas Present—The Poultry Fancier free for one whole year to every customer.

THE CONAVILLE YARDS

Mallet Creek, Ohio

EGG-RECORD LEGHORNS THAT WIN

The Greatest Laying Strain of These Great Layers

Our flock of S. C. Buff Leghorns are bred from **Definitely Pedigreed** stock whose ancestors have laid from 200 up to 267 eggs in one year. During last four years we have supplied winners direct from our yards for Indianapolis, Columbus, Cleveland, Racine, Los Angeles, Kansas State Show, etc.

A WONDERFUL RECORD IN 1913-14.

We exhibited at four hot shows this season, winning more prizes than all competitors combined.

TWO LARGE SHOWS ON SAME DATE.

Chicago, Jan. 5-11. 1, 5 ck., 1, 3, 5 ckl., 2, 3, 4, 5 hen, 1, 2, 4 pul., 1 pen. Grand Rapids, Jan. 4-10. 1, 2, 3, 4 ck., 1, 2, 3, 4, 5 ck. (11 entries), 3, 4, 5 hen, 1, 3, 4 pul. 1, 3 pen, Silver Cup, etc.

51 birds in above two shows on **same date** and **42 were** winners.

At Kalamazoo Dec. 29 we won 1 ckl. (over 2nd ckl. at Dec. Chicago Show) also 3, 4, 5, 1, 2, 3, 4, 5 pul., 2, 3, 4, 5 ck., 3, 4, 5 hen, 1, 2 pen (over 2nd pen Dec. Chicago Show), $50.00 cup, etc. At State Show of Am. Poultry Ass'n., Battle Creek, Dec. 8, 1, 3, 4 ckl., 1, 4 pul., 1, 2, 3 hen, 2 ck., 1 pen, $10.00 gold special best display in Mediterranean class. Let us make your Buffs win at the **nest** and at the **Show.**

1st Hen Chicago Col. Show, Dec. 1914.

Dr. L. E. Heasley, Box F. Holland, Mich.

THE GREAT WILKES-BARRE SHOW

The poultry show held at Wilkes-Barre, Nov. 30th to Dec. 5th was one of the most successful shows ever held by this organization. The competition was very keen in all classes and it required a very fine bird to win.

The show was held in the large Ninth Regiment Armory where all the birds were shown to the best advantage possible in single tiers. The Armory was handsomely decorated and together with the beautiful argricultural and floral displays, made a very fine appearance.

The White Wyandottes and the White Leghorns were very large classes and all fine specimens, there being 69 singles and 2 pens of White Wyandottes, with 60 singles and 8 pens of White Leghorns. There were large classes in nearly all the standard varieties, also pigeons and bantams.

The Honors of the show went to the following:

Best Cock in show, Black Breasted Red Game Bantam owned by W. J. Hill, Lestershire, N. Y.

Best Hen in show, White Leghorn, owned by Hillside & Spring Brook Farms, Trucksville, Pa.

Best Cockerel in show, White Plymouth Rock, owned by Hillside & Spring Brook Farms, Trucksville, Pa.

Best Pullet in show, White Wyandotte, owned by A. H. Brown Montrose, Pa.

Best Pen in show, White Leghorns, owned by Hillside & Spring Brook Farms, Trucksville, Pa.

These birds were the sensation of the show, all of them being very beautiful specimens.

Following is a list of the awards.

Champion Layers

North American Laying Competition Winners

These five American-bred White Leghorn Pullets won a silver cup and seven medals in the North American Laying Competition which closed October 31, 1914. This pen made the wonderful record of 1139 eggs, the highest official record made by any pen of five hens bred on American soil. Individuals produced 250, 250, 224, 222, 192 eggs.

These record-holders were bred by the Pennsylvania Poultry Farm, a concern which has produced many world's champion layers. Their pen of S. C. Rhode Island Reds in the same competition laid 1043 eggs, an average of 209 eggs per bird, the best official record ever made by a pen of Reds. Their pen of ten White Wyandottes in the last Missouri Competition produced 2006 eggs, over 200-egg average, one bird laying 265 eggs. The latter was the highest individual Wyandotte record made in the competition and the second highest individual score, one thousand birds competing.

"The Story of the 200-Egg Hen" contains photos of all these laying competition winners and much valuable information regarding "hens that lay." Write the Pennsylvania Poultry Farm, Box L, Lancaster, Penna., for free copy.

THE BUFFALO

The Great Repeat Order

INCUBATOR

You are going into the Chicken Business to succeed, aren't you? You don't want to fail, and neither do you want any half-measure of success. The Buffalo insures the success you hope for and are entitled to. The Buffalo has spelled success for thousands of users; and it will for you. Become one of our "Repeat Order" customers as your buisness grows; and it will grow if you use a Buffalo.

Mr. Robert Christophel, Pine Bay Farm, Holland, Michigan, bought one 360 egg Buffalo early last season. In March he ordered two more, and followed up with orders for two, one and then two more,—rush orders placed as the machines "Earned themselves from orders received." At the end he wrote "We have had a splendid season."

There is no reason why you should not do as well as this Repeat Customer. Custom hatching and the day old chick business pays, and it is quick returns.

Manette, Wash., Dec. 16th, 1914.

Dear Sir:—

"Enclosed find draft in payment for five No. 3 Buffalo Incubators which please ship at once.

have already seven of the No. 3 Buffalo Incubators and am increasing the number to twelve because I have found the Buffalo so satisfactory. Last Spring I hatched over 5,000 chicks with the seven Buffalos, averaging better than 87 per cent hatches. The machines worked well, hatches were on time and of the "Clean-up" kind, and the chicks were strong and active."

W. J. Guthrie.

The Buffalo has earned its reputation on its reliability. One success recommends another. The Buffalo is built right and priced right. It is built to fit your case, and to insure you the largest measure of success without you squandering any money.

The Buffalo Brooders are just as efficient. A postal brings our circular,—send for it to-day.

Buffalo Incubator Co.,

484 Dewitt St., BUFFALO, N. Y.

GEO. L. YOUNG REFUSES A RE-ELECTION.

Geo. L. Young, who for a great many years served as secretary of the National Bantam Association, has refused a re-election. The reason being that he has not the time to attend the duties of the position. Bantam breeders throughout the country will regret to hear this, as Mr. Young has served the association faithfully and under his administration the membership has increased wonderfully and the work which he accomplished for the midgets of the poultry world was far reaching. The successor of Gen. Young will have to work long and hard to keep the affairs of the Club up to the standard set by him.

Hatching Eggs That Hatch

Bred for eggs, but good enough to show. Thompson Barred Rocks, Pittsfield White Rocks, Cook Orpingtons, Poorman White Leghorns, Regal White Wyandottes. 15 eggs, $1. post paid. 100 eggs, $4. Quality talks.

The Home Trained Organization Back of Old Trusty

You who are familiar with Old Trusty incubator from seeing it advertised in this paper year after year will be interested in knowing something about the huge institution that is back of this machine, I refer to the Johnsons in Clay Center, Nebraska, with whom, I had the pleasure of spending a few days sometime ago.

When you consider the fact that Clay Center, Neb. is today practically the hub of the incubator industry, and that only a few years ago it was hardly more than a mere stopping place on the prairie, you can begin to realize what the Johnsons have accomplished with the growing sale of Old Trusty Incubators and Brooders.

Besides this great factory, there are warehouse connections, at St. Joseph, Mo. and Seattle, Washington, which enable the Johnsons to deliver Old Trusty quickly to any point in the country. From these different points a total of about 100,000 machines are sent out each year.

The photograph above is said to be the largest exclusive incubator factory in the world. It is quite a contrast to the boiler room of the old grist mill where the business was started some years ago by M. M. Johnson, father of H. H. Johnson, present head of the institution.

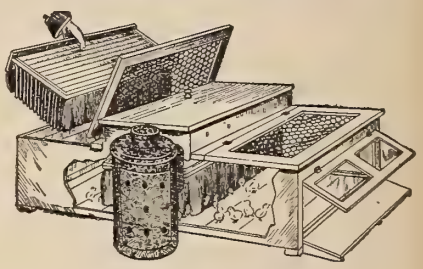
Here is an excellent example of the success that comes out of a true sincerity of purpose and a willingness to serve. The modern school of business was unknown to the Johnsons. They were practical farmers and poultrymen who turned their hands to making and selling incubators and brooders. Their customers, they considered, were people just like themselves. They knew the needs of the poultry raiser and felt capable of supplying them. How well they did it is shown in the position this big institution holds in the poultry world today.

As new help was needed, it was home trained. No outside "experts" were hired. As a result they have an organization of producers. There are no "big guns" or figure heads—drawing fat salaries on the payroll. Every man and woman there is an actual worker. To be sure the Johnsons have "experts" in their employ, but they become experts by growing up with the business and being of service to hundreds and thousands of customers. For that reason they are better able to help you to succeed today. When the growth of the business brought in new conditions in the manufacturing end, the Johnsons or some one in their employ trained themselves to handle them. For instance, it was found that power for running the machinery could be had cheaper with electric motors installed in different parts of the factory. The town had no electric power plant. The Johnsons built one for their needs. Soon the townspeople expressed a desire for electric street lights and electric lights in their homes and places of business. The Johnsons plant could spare the current. Today they not only run the machinery and light their own factory and office building, but furnish light and power for the whole town. However, three-fourths of the electricity generated is consumed by the Johnson factory and office.

The Johnsons do their own printing, which includes the many thousands of copies of the Old Trusty book. Practically all of the printed matter you receive from them is printed in the sepa-

Here is the

Chick Saver



The "BUCKEYE"

KANT KROWD KLOSE KONTACT

Brooders and Hovers

Most wonderful artificial mother ever invented. Over-crowding, over-heating and suffocation absolutely impossible.

The only hot water brooders and portable hovers that have been approved by the National Board of Insurance Underwriters.

You can raise chicks in zero weather with the "BUCKEYE" Kant Krowd, Klose Kontact Brooder. Every chick kept warm and cozy without crowding.

Save the 40% That Usually Die

Get full profit from your incubator by raising every chick! Steady, uniform heat with perfect ventilation. No foul odors. Klose Kontact for every chick—Nature's way. The "BUCKEYE" Kant Krowd Klose Kontact pays for itself in a short while by the chicks it saves from death.

You have only to see these brooders in order to realize their wonderful possibilities.

Write for our catalog of "BUCKEYE" Incubators and Brooders, also name of nearest dealer. Do this today.

First Display—Syracuse, N. Y., Trenton, N. J., Hempstead, L. I., Williamsport, Pa., Paterson, N. J., Palace Show, New York City and also First Display White Eggs. Best breeding and exhibition birds for sale. Booking orders for eggs now.

The Martling Hennery, BOX 186 E, Ridgefield, New Jersey

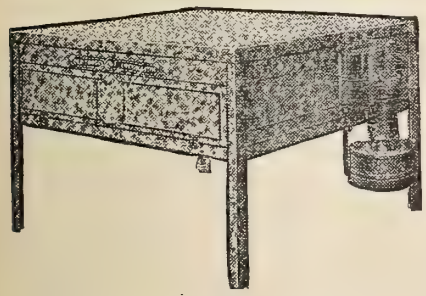
rate building erected for the purpose alongside of their big office building.

Extreme precaution is taken to avoid fire risk. This also was one of the advantages in view with the installing of the electric power plant. It not only gave safer and better light but provided steam heat.

No workman smokes during working hours. No one takes a lighted pipe or cigar into the factory. The gasoline for the tinners torches is stored outside of the building.

So much for the factory and equipment. Now let me tell you something about the incubator, which with the brooder, is the only product put out by this big institution.

I asked H. H. Johnson what there was about Old Trusty that made it unnecessary to think about changes in its construction which has been practically the same year after year since it was made by hand by his father. He replied that except for a few minor improvements for sake of convenience and regulating, it didn't need any changes. It was built right in the first place. His father being an engineer found that hot water provided the most efficient heating system. How correct he was can be shown in the tendency today for most all incubator manufacturers to adopt hot water heating.



Hot water heating, it has been found is a great adaantage for making big hatches in winter and early spring when the weather is still pretty cold. This gives you laying pullets before fall. You can get chickens and eggs on the market when prices are highest.

Most likely this is what M. M. Johnson had in mind. So far as anyone can find out, he was the first with a hot water pipe heated incubator. Also it is said that, with the simplified construction of this machine, he was the pioneer in making artificial hatching practical and profitable for anyone who wanted to take it up.

But whether the Johnsons want to make claims to this title or not, it is known that their success has pointed the way for many other manufacturers.

The style of their machines, the make up of their catalog, the half-tone photograph of users of the machine, the good homey style of talking first person to its readers, all have been adopted here and there throughout the industry.

MINORCAS AT "THE PALACE".

At the Palace Poultry Show the Minorcas was not so numerous as I expected previous to the Foot & Mouth disease scare, and more numerous when show time came. I had anticipated a large exhibit in this class and there would have been with normal conditions prevailing. Had not the Management of the Empire Poultry Assn. got very busy at the start of this bugaboo the entries would have suffered a greater loss. The class of Minorcas was of excellent quality, and a credit to each owner of the birds shown. S. C. Black 1st Cock a grand good bird, 2nd near enough like 1st to be his full brother except white in face which is allowed, 3rd to 5th closely pursued by the next bird following. Hens a very even class throughout, Not a bad bird in the lot, taking out the five prize winners the balance, each had some slight defect of not sufficient importance to disqualify any one bird. Cockerels, 1st no fault to find with this bird, good enough to win in any show, 2nd close up 3, 4, 5 trailing in this order, balance my notes say, crooked breast bone. Slightly gray flight, and condition not as good as other in class. Pullets were the Star of the Minorca class in quality. These pullets were just at their best and required a lot of my best efforts to place the awards which was down on very narrow margins. Pens (4) all good birds and worthy of their spurs. Rose Comb, Black and White and S. C. White small classes.

Sincerely,
Rowland Stony.

GREAT BARGAINS

For the next 30 days we will sell cockerels of the following breeds; viz, WHITE WYANDOTTES, MOTTLED ANCONAS, SILVER CAMPINES, any of which are fit for the show room at from $2 to $5 each. Every bird bred from heavy laying strains. A limited number of two-year-old ANCONA HENS, at rock bottom prices. Satisfaction guaranteed or money refunded.

Lone Oak Poultry Yards, - Batavia, N. Y.

Purity White Orpingtons

Heaviest layers of all breeds, and winners of the Blue at many important shows.

White Runner Ducks

First Prize Winners at Boston and elsewhere. Splendid layers and profitable birds to keep.

Write for further information.

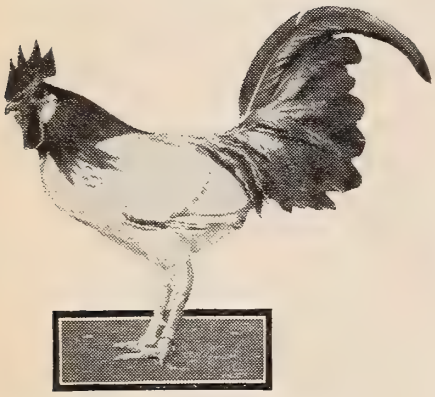
H. L. Goodwin, Farmington, Maine

The Lakenvelder Fowl

By J. C. Eby.

This article is in reply to the many readers of the Poultry Fancier, who wish to know what a Lakenvelder fowl looks like, and where they originated from.

Lakenvelders are primarily Dutch fowls, as their name would indicate, and were bred in Holland for many years, and there is a tradition in the Netherlands that they originally came from Jerusalem. Their name is taken from the word "lichen" (meaning linen) and "veldt" (meaning field), thus making up the name "Lakenvelder" or a field of linen: about as near a description of the fowl as can be given, is "a shadow on a sheet (or field) of linen." They were introduced into England and Germany, several years ago, but have only been in this country about seven years.



TYPICAL LAKENVELDER COCK.

Head of first prize pen, Madison Square Garden, December, 1913. Bred and owned by Woolifield Poultry Yards, Folsom, N. J.

There is a slight difference in the coloring between the German Lakenvelders and the original Dutch or the English type: the English Standard is bred most in this country. To form an idea of the English type of Lakenvelders, imagine a large and beautifully formed White Leghorn cock, with the head, neck, saddle hackle and tail of the most intense black, and you have a fair picture of the Lakenvelder; the German Standard calls for a striped saddle hackle in the male, but otherwise it is the same as the English Standard. The hen has a black neck and tail, with the rest of the body white.

In general character, they are spright and active, but not so nervous as the Leghorns, are easily tamed and will do well in confinement. They require very little feed, where they have access to a wide range, on account of their great foraging abilities, and will often leave grain laying in their yards, when given a chance to sport on the open fields.

They are practically non-sitters, and as layers they rank with the Leghorns or Hamburgs; their eggs are pure white and as large as those of the White Leghorn. In build they are somewhat larger than the Leghorns, and their flesh is somewhat similar in color, but has somewhat of a gamey flavor.

In Holland they are frequently referred to as the "Jerusalem Beauties", on account of their handsome markings, and in parts of Germany, they are known as the "Everylasting Layers".

Outside of their laying qualities, they are an object of great beauty and an ornament to any yard, and when a flock of them is feeding together, they form a most beautiful composite of black and white on the landscape.

INCUBATOR BARGAINS

One Buffalo, 350 egg incubator practically new, used one season) everything complete, ready to operate, $15.00 One Cyphers Paradise Brooder, 4 sections, 400 chicks capacity, good as new. Price, $32.00. Price new, $65.00. Top sections sold separately if desired. Hatching eggs from my famous White Wyandottes and S. C. White Orpingtons for sale.

W. W. BOHN, WERNERSVILLE, PA.

$7.50 for a Genuine "BUCKEYE"

100% Hatch Incubator

anywhere east of the Rockies and north of Texas. A little higher in the west on account of freight rates. Not a toy nor experiment, but a genuine 60-egg scientific hatcher. Six sizes up to 600 eggs at proportionate prices. The incubator that gives you only 60% to 70% hatches is an egg waster. The "BUCKEYE" gets a chick from every hatchable egg. Nearly half a million in successful operation and sold by 1100 dealers.

40 DAYS TRIAL

Prove It For Yourself

Guaranteed to Hatch Every Hatchable Egg

Makes no difference what they TELL you, 70 per cent is NOT a good hatch. You get 100 per cent with the "BUCKEYE" every time, whether you understand chickens or not.

Prove this at our risk. Try the "BUCKEYE" 40 days. If you don't get a chick from every hatchable egg, send it back at our expense. We make this unusual guarantee to prove that the "BUCKEYE" is in a class by itself and should not be compared with 70 per cent hatchers.

MAKING MONEY the BUCKEYE WAY

MARTIN'S WINNERS AT BOSTON, 1915.

Following comment of F. L. Scwell's on the pen of White Wyandottes owned by John S. Martin, on page 51 of last month's issue, will be of particular interest to our readers. The following is what Mr. Sewell has to say:—

At no other show on earth is the White Wyandotte seen to better advantage than at Boston's big mid-winter's event, in whose records for more than twenty years, White Wyandotte progress has been read. John S. Martin, Port Dover, Canada, made his first great winning at Boston, 1906, when his old "Regal" won first place in the cock class and attracted the admiration of the Japanese Government poultry expert then visiting America's leading shows. They placed on "Regal" their special award of a bronze vase for being the "best bird in the show." Mr. Martin's young birds in 1909 won special for best cockerel and four pullets in the January, 1910 show. In this group are portrayed Mr. Martin's four birds that had the honor of winning all regular first prizes, an achievement we do not remember ever having been equaled by any other exhibitor in this class at the Boston Show. The symmetrical proportions of the pullet are typical of the "Regal" strain and also well express the practical type Mr. Martin has persisted in retaining on account of its true value as egg producers and table poultry. Credit is due Mr. Martin and the excellence of his White Wyandottes for helping to secure to the Wyandotte Standard the more desirable description of "moderately short". Without the handicap of "short" that some strains have labored under during several years past, Wyandotte progress will take its former place and its popularity as an all-round breed will keep it in the front rank of America's most profitable breeds. After visiting his yards last year and seeing the splendid quality and vitality in his northern strain, it is easy to appreciate some of the reasons for the rapidly growing demand he has for his White Wyandottes.—F. L. Sewell.

Single Comb Rhode Island Reds

TESTED, TRIED AND TRUE WINNERS

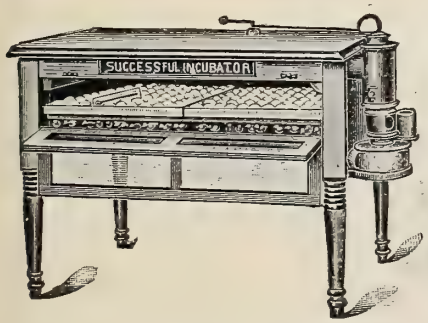
At the great Baltimore 1914 show on 19 birds entered, 17 were placed and won special for best display. Also winners at Philadelphia and Hagerstown. 1914 matings cannot help but produce a large percentage of prize winners. Eggs, $2.00, $3.00 and $5.00 per setting. Large lots a matter of correspondence. Stock for sale at reasonable prices. Fertility and satisfaction guaranteed.

GEO. W. WHITE, -:- HAMILTON, MD.

BOOK BRIMFUL OF POINTERS FOR POULTRY SUCCESS.

Facts That Should Be in the Hands of Every Reader—Sent Free on Request.

A book of unusual merit is published by the Des Moines Incubator Company, which any reader of this paper may obtain free by writing to that company. Its 128 pages are filled with up-to-date information which should be in the hands of every poultry raiser—beginner or veteran who intends to take advantage of high prices and increasing demand of the egg and poultry market to make this the most profitable year of all.



The book illustrates and describes the successful incubators which are famous throughout the poultry world for the result they have given for a generation. It discusses the whole subject of incubator construction, in a plain, straightforward way free from exaggeration—and gives valuable suggestions as to outfits for every scale of poultry raising, from the smallest to the largest. To these are added many pages from the personal experiences of poultrywomen in all parts of the country.

The personal guaranty of J. S. Gilcrest, President and General Manager, is a strong feature. Twenty reasons for the "Success of the Successfull" will appeal to everyone who appreciates the scientific care with which a hatching machine must be built to make certain of high percentage hatches all the time. Special emphasis is laid upon the durable cabinet construction of the Successful—the provision for heating the cold edges of the body first, and the maintenance of even heat—the strong and heavy copper tank—the simple, effective application of moisture, etc. The book gives the details of Mr. Gilcrest's offer of a $25 course of poultry instruction free. This course includes 20 lessons, covering mating, housing, hatching, feeding for the market, conditioning poultry for the show, poultry disease, etc. Mr. Gilcrest, himself a life member of the American Poultry Association, is a recognized authority on the subjects of which he treats in these lessons—and he is in constant touch with leading poultrymen and knows their methods.

A postal from any reader to the Des Moines Incubator Company, 554 Second St., Des Moines, Iowa, will bring the book, and the plan under which the lessons are sent.

ROUEN DUCKS

Breeding stock of this highly useful and attractive variety at reasonable prices. Eggs for hatching from carefully selected matings.

NEW OFFICERS OF THE AMERICAN CAMPINE CLUB.

The work in connection with my personal business as well as that of Secretary of the American Campine Club has grown to such an extent that I have been compelled, although very reluctantly, to give up my office as Secretary of the Club, although I will continue my Campine business as in the past only on a larger scale.

I am pleased to inform each member that Mrs. Chas. H. Owings, of Dumont, N. J. was elected on December 4th to the office of Secretary and Treasurer of the Club.

The members are to be congratulated upon their good fortune in securing Mrs. Owings as Sec'y and Treas. She is one who will give the work very conscientious and thorough attention.

I hope that each member of the American Campine Club, as well as all lovers of the Campine breed will give Mrs. Owings their hearty support as they have done with myself in the past.

The full list of officers elected at the annual meeting is as follows:—

President, Frank E. Hering, South Bend, Ind.

First Vice-President, K. M. Turner, West Nyack, N. Y.

Second Vice-President, M. R. Jacobus, Ridgefield, N. J.

Secretary-Treasurer, Mrs. Chas. H. Owings, Dumont, N. J.

Honorary Vice-Presidents, same as last year.

Executive Board, S. V. R. Martling, Ridgefield, N. J., C. A. Phipps, Wayland, Mass., T. E. Gensemere, Creston, Ohio., with the Pres. and Sec'y.

I wish to take this opportunity to thank each member of the American Campine Club for the hearty support given me as their Sec'y. This support and kind words received have made my duties in connection with this office extremely pleasant and such as I shall always cherish in years to come.

Very truly yours,
M. R. Jacobus.

SAVE THE BABY CHICKS

How the Johnsons Advertised Their Incubators 18 Years Ago

Getting Johnson Made Incubators Introduced Beyond the Home Neighborhood

HERE'S the way M. M. Johnson, the inventor, writes about the incident himself, in his "Ups and Downs" story in the Old Trusty Book—

* * * —"So I secured a lay-off from the mill, rigged up a one-horse spring wagon with a platform hung by coil springs, placed an incubator full of eggs on the little platform, and we (my wife and I) started on a six weeks' journey to make hatches here and there as we traveled. Our first point was Lincoln, Neb. Out of 50 fertile eggs timed for that hatch we got 49 bright chicks, driving around here and there on the main streets of Lincoln. From Lincoln we went to other towns in Iowa, Missouri and Kansas, and in some instances every egg due to hatch did hatch. The Nebraska Farmer, of Lincoln, gave my exhibition a nice write-up, as also did the Nebraska Daily State Journal. At Topeka, Kas., the Kansas Farmer gave a write-up, as also did the Daily Capital at Des Moines, Ia. The Homestead, Wallaces' Farmer, and other papers described the wonderful hatch and the circumstances." * * *

Finish this Story of Johnson's in Old Trusty Book —We Will Send It Free if You Will Write for It

Advertising the Johnson Made Incubators today may be a whole lot different from this effort of 18 years ago, but the good reliable construction of the incubators never called for a change. That no doubt was because they were built right in the first place. Except for the few improvements made for the sake of convenience, our Old Trusty of today is practically the same incubator that Johnson hauled around over all kinds of roads and left exposed to all kinds of weather, and still got from it a good percentage of chicks.

That was good proof of its reliability, but it's not as good as the proof you have today when you consider its work in the hands of about 580,000 owners in all parts of the country. That we believe is the best proof of all. So far as we know, more people have bought this incubator than could be claimed by any three or four other manufacturers put together.

Now there is just one reason why people buy an incubator, and that is to hatch chicks. And when so many people have decided upon Old Trusty as being the one best machine for keeping their poultry profits up and their expenses down, it must be a pretty good recommendation for the machine.

There's nothing complicated about the Old Trusty. We have no string of high sounding instructions to send with it. Any one, young or old, can operate it, and get as good results as an old-timer.

Send Today for the OLD TRUSTY BOOK

and read about the construction of this famous incubator. We urge no one to buy an Old Trusty sight unseen. We send it with the understanding that it proves every claim we make for it, or you send it back and get your money. Let me quote you our price based on 100,000 sales this year from the largest exclusive incubator and brooder plant in America.

IMPORTANT ANNOUNCEMENT

On January 20th, Mr. C. N. Myers, one of Hanover's most successful and widely known business men, purchased the Poultry Fancier, together with all its equipment, good-will, mailing rights, etc., at public sale, at the office of the Poultry Fancier Publishing Company. Mr. Myers enjoys a wide acquaintance among the poultrymen of this country and also enjoys the reputation of being one of the most successful Barred Rock breeders in the United States.

The Poultry Fancier will be published in the future under the personal supervision of Mr. Myers, whose ambition is to give the Poultry Public one of the most ideal and popular publications of the day.

It affords the writer unusual pleasure, therefore, to announce that every possible courtesy will be extended to the advertisers and friends of the Fancier in the future, under the new management. We solicit your continued patronage and good will for the Fancier and take this opportunity to assure all our readers that nothing will be left undone to give them a Journal, worthy of a prominent place in their home libraries.

F. D. SUTTON, Editor.

THE BOSTON POULTRY AND PET STOCK SHOW

The great Boston 1915 Exhibition of Poultry and Pet Stock will be recognized by all who are familiar with its intrinsic value as the greatest show ever staged at the "Queen City of the New England States". Practically every class was well filled and the quality was never better. In fact, we heard many competant judges remark, "that in a large number of the open classes, as great quality was never displayed before in Boston". These classes included the Reds, Rocks, Wyandottes, Langshans, Brahmas, Leghorns and Orpingtons.

The New England Fanciers were out in full force and the competition was keen in every department. The judging was all of a high order and it affords us unusual pleasure to state that we heard but little, if any "knocking" on the part of the exhibitors with regard to the justice or injustice concerning the way the awards were placed. There is one point in which W. B. Atherton, the popular Secretary of the Boston Show always excels, and that is in his wise selection of conscientious judges. Atherton is seldom, if ever deceived in the quality of the men whom he chooses to place the ribbons in the Boston Show. His long years of experienre as a Fancier and his wide acquaintance with poultrymen and poultry judges enables him to keep his finger upon the pulse of the poultry world, and anyone who is able to "put one over on to Atherton" is certainly welcome to his victory.

There were a number of changes made in the decorations of the Boston Show room, which greatly enhanced the beauty of its general surroundings and many complimentary remarks were heard from people from all sections of the United States who were in attendance.

The banquet, staged at the Copley Square Hotel, was one round of pleasure and delight to all who attended. It was a feast of good things from beginning to end and was as free to all who desired to take advantage of the occasion as "the waters that course their way on to the great deep".

There were almost six thousand entries at this splendid exhibition, to be exact, there were five thousand, eight hundred fifty-three. We understand this to be a record even for Boston.

Dressed poultry and eggs, as well as live utility fowls were given a wide recognition and added greatly to the popularity of the Boston Show. We understand that Mr. Atherton has "something up his sleeve" for next year but he wouldn't allow any of us fellows to get a glimpse of its physiogamy or the nature of his plans for the 1916 exhibition. It is a foregone conclusion, however, that if any other show in America, out-rivals the glory and attraction of Old Boston in 1916, they will certainly have to put their best foot forward at an unusually rapid pace. Congratulations are due for the success of the Boston Show, not only to Mr. Atherton, but also to his efficient co-workers, who were on the job every moment of the time, looking after the interest of the exhibitors, judges and visiting poultrymen.

The awards of the Boston Show will be found in another section of this month's issue of the Fancier.

ONLY ONE MORE GREAT SHOW TO BE STAGED THIS SEASON

The GARDEN SHOW, "The Premier Show of America" as it is oft-times called, will be the last of the great events in the poultry world to take place this season. We understand that Mr. Cleveland, the popular secretary of the Madison Square Garden Show, has his plans fully completed to stage the greatest poultry exhibition ever witnessed at the famous "Old Garden".

Mr. Cleveland was at Boston, busy every moment of his time among the large and small exhibitors there, making final arrangements for their entries at New York and the congenial smile that he wore at all times was sufficient evidence to satisfy the most skeptical that the Madison Square Garden Show will prove a surprise, both in quality and numbers of entries.

We also understand, from good authority, that many of the greatest breeders of the West, South and East (many of whom have not exhibited at the Garden Show for a number of years) will have large exhibits there in competition with others who have in the past had practically their own way.

If such is the case, we predict that it will not be one, two, three for some who anticipate a "world wide record" in many of the popular classes of the poultry kingdom. We believe the time has come, in fact, we are fully satisfied that such is the case, that the greatest possible good and popularity of any show, of as large dimensions as the Garden, will lie in breaking up of the "one man victory", through strong competition on the part of the many, resulting in a wide distribution of the most coveted prizes in every alley in the show room. We believe this will be one of the lessons learned at the Garden Show this season and it will do much toward re-establishing the popularity of our great poultry exhibitions among the rank and file of poultrymen throughout this country.

CORRECTION.

In the Buffalo Show awards, which appeared in the Fancier, D. P. North, of Waverly, N. Y., was given the credit of winning 5th cockerel, when it should have been 2nd cockerel in the Buff Rock class. There were eighteen cockerls in this class and Mr. North's bird was one of the very finest in the entire collection.

COMMUNICATION—READ IT.

Poultry Fancier Pub. Co.
Gentlemen:—

The article of H. V. Tormohlen, Portland, Ind., in Jan. issue of Fancier, is one of the best articles we have ever read on the Louse and Mite proposition and should be published in every Poultry Paper in U. S. We wish to extend our thanks to the writer, through the columns of the Fancier.

We are very truly yours,
Fred. J. Kelm,
C. F. MaGeke,
Seneca, Kansas.

SOUTHERN PENNSYLVANIA BREEDERS AND FANCIERS ELECT OFFICERS.

Officers were elected and the date for the next exhibition was decided upon at the annual meeting of the Southern Pennsylvania Breeders and Fancier's Association, held in the county court house Tuesday evening. The officers selected are as follows:

President—Norman Blasser, York.
Vice President—Dr. T. H. Charmbuy, Hanover.
Secretary—Leon Burg, York.
Assistant Secretary—G. C. Blessing, Hallam.
Treasurer—Charles S. Shirk, Hanover.

The following were named members of the executive committee—C. N. Myers, Hanover; R. J. Knisely, York; W. H. Myers, Hallam; H. M. Keeney, Red Lion; Jacob Eberly, Dallastown; W. G. McBlain, York, and P. H. Glatfelter, Spring Grove.

According to the reports of the various officers, the first poultry show, held last month in York, proved a big success. A fair sized profit was realized and this will be used for the exhibition next season which will be held November 30 to December 4. The place has not been selected as yet.

- - REGAL - -
- - WHITE WYANDOTTE BOOK - -

I have just received from the printers another edition of my book on White Wyandottes. It contains 60 pages and is without doubt the most complete book that has even been published dealing wholly with the White Wyandottes. It is full of illustrations from life and its pages deal with a variety of subjects, including Chapters on Origin, Description, Feeding, Care of Breeding Stock, Fertility, Color or Characteristics, Washing and Fitting for Exhibition, Poultry Diseases, etc.

My object in issuing this book is to bring to the attention of every White Wyandotte breeder, the Regal Strain, America's Finest White Wyandotte. The magnificent winnings of this strain at the leading shows have never been equalled. New York State Fair, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913, 1914,—47 blue ribbons out of a possible 54.

In 1913 my birds established a new record for the Boston Show in White Wyandottes, by winning Best Display with a score of seventy-two points which was twelve more than my twenty-one competitors combined. My customers all over the country have established records just as good.

Would you like such a record? Then breed the Regal Strain.

3000---Cocks, Hens, Cockerels and Pullets for Sale---3000

SPECIAL—200 exhibition cockerels and 400 beautiful pullets ready now to win the blue ribbon for you. 100 well matured cockerels from my heavy laying Dorcas line, $10, $15, $20 and $25 each Dorcas pullets, $3, $4 and $5 each. Stay white utility cockerels, $3 and $5 each.

Send one dime for the REGAL WHITE WYANDOTTE BOOK. The information it contains will be worth dollars to you.

FREE: My catalogue and mating list is free if you will send me your name.

John S. Martin, Box D, Port Dover, Canada

THE AMERICAN BLACK ORPINGTON CLUB

The 1914 election of officers of the American Black Orpington Club resulted in the following officers being elected.

President, C. S. Byers, Hazelrigg, Ind.

Vice-Pres., R. N. Barnum, Lime Rock, Conn.

Sec.-Treas., Ralph Whitney, Rochester, Minn.

Executive Committee, Ora Iverholser, Eaton, Ohio, P. Roberts, Esser, Int., Canada, C. J. Carter, Columbus, Ind.

The Annual Meeting and Show of the Club will be held in Indianapolis, Ind., Feb., 1-6, 1915, at which a rousing meeting will be held. There will also be an Eastern Meeting held in connection with the Madison Square Garden Show, New York City.

The American Black Orpington Club was merged with the National S. C. Black Orpington Club at the annual meeting of the National at Pittsburg, Pa. Exposition Show Jan., 1914 under the name of the American. All of the live members of the old club transferred their membership and now a grand united club is boosting the Black Orpington.

We are expecting to send a free copy of the 1915 Year-book of the Club to every breeder of Block Orpingtons who will send their name and address. The book is now off the press, if you desire a copy send now. Address:

Ora Overholser, Sec.-Treas.,
American Black Orpington Club,
Eaton, O.

American Light Brahma Club.

I believe you will be interested in knowing about some of the things that are bringing our Club so rapidly to the fore. Herewith find a copy of our January Bulletin, the third issue since publication of our Year Book on March 1st. I would direct your attention particularly to the following matters:

1st—Increase in membership from 171 on March 1st to 236 on January 1st.

2nd—Employment of an artist by the Club to draw ideal sketches of male and female Light Brahmas. Proofs of the preliminary drawing were sent to 1100 Light Brahma breeders, judges and fanciers throughout this country and Canada. Comments from all that we received were gone over at an Executive Committee meeting and the revised sketches which are reproduced in Bulletin herewith pretty well exemplify what the majority of our breeders want. There are still some changes to be made in the female bird but all these will be carefully gone over at our Annual Meeting.

3rd—Splendid cash offers at our Annual Meeting at Madison Ssuare Garden and the securing of two judges for L. B.—both members of our Executive Committee.

4th—The dinner of old time L. B. breeders at the Hotel Breslin at 7 P. M. Saturday, February 13th, already acceptances have been received from Messrs. Drevenstedt, Sewell, Platt, Megargee, Atherton, Nevius, Orr, Shaw, Balch, Rankin, Howell, Cleveland, Hewes, Prescott, Hendrickson, Stein, Groesbeck, Ekenberg and Springer.

5th—The beautiful oxidized metal and silk ribbon badges—a very great improvement and much more handsome than any ever offered before by our Club.

HAWKIN'S
ROYAL BLUE
Barred Rocks

Have produced the Grand Sweepstake winners at New York and Chicago in 1912-13, besides being leading winners at Boston and other prominent shows, for thirty years. Choice exhibition birds at honest prices. Illustrated catalogue FREE.

A. C. Hawkins, Lock Box 24, Lancaster, Mass.

FOR SALE

LARGE

1	Red Pyle Game Cock	$10.00
9	Red Pyle Game Hens	4.00 each
2	White Cochin Cocks	5.00 each
6	Buff Cochin Cocks	$4.00—8.00 each
4	White crested White Polish Cocks	4.00—8.00 each

BANTAMS

3	Birchen Game Cocks	$5.00 to $8.00 each
10	Red Pyle Game Cocks	3.00 to 8.00 each
1	Partridge Cochin Cock	3.00
1	White Cochin Cock	5.00 to 8.00 each
4	Buff Cochin Cocks	3.00 each
4	White Crested White Polish Cocks	3.00 to 8.00 each

Most of the above are prize winners. Must dispose of them to make room for young stock.

S. B. ROY, WORCESTER, MASS.

Mr. Quisenberry Appointed Superintendent of Poultry at the Panama-Pacific Exposition

T. E. Quisenberry of Mountain Grove, Missouri, has accepted the appointment as Superintendent of Poultry at the Panama-Pacific International Exposition at San Francisco.

He is now busy closing up some work he has undertaken and will report for duty at San Francisco at an early date.

Governor Majors of Missouri has given him leave of absence so that when he is through with his work at San Francisco he may return to take up the work he has so successfully conducted in his home state.

Mr. Quisenberry has been Superintendent and Secretary of the Missouri State Show for ten years, which is annually held at Kansas City, St. Louis, or other of that state's largest cities.

He has had the handling of from three thousand to five thousand birds at this show.

Entries have been made from twenty-nine different states. This show has grown from a five hundred bird event to its present size during Mr. Quisenberry's connection with it.

He has also superintended the poultry department of the Missouri State Fair for a number of years.

In addition to his work with poultry shows he has, as Director of the Missouri State Poultry Experiment Station, gained a knowledge of methods of cooping, feeding and handling which will be of great service to exhibitors who will show their birds at San Francisco.

I feel, after careful study of all the men who have been considered for this position, that in accepting this appointment Mr. Quisenberry has added to a long record of accomplishment which is his, and that poultry exhibitors and the Exposition are to be congratulated in that, he will stage the poultry show which will be so great a feature of the Panama-Pacific International Exposition.

He has the training, the ability, and the character; three important characteristics in a position which requires such a combination.

Yours very truly,

D. O. Lively,

Chief of the Department of Live Stock.

JOHN S. MARTIN 1915 YEARBOOK.

We have just received at our office John S. Martin's 1915 Regal Yearbook, which in our estimation, is one of the most cleverly compilled catalogues on poultry we have ever read. What we mean by clever is this, that it is one of the most sensible, appealing and reasonable poultry catalogues that we have ever examined. Mr. Martin has the knack of expressing his convictions in terms which do not exaggerate and which strike home to the heart of the reader with a conviction that Mr. Martin is recording facts and facts only. Now-a-days poultry catalogues galore are flooding the country from one end to the other, containing claims which fairly stagger the mind of the ordinary poultryman but John S. Martin has steered clear of the shoals in the compilation of his 1915 Regal White Wyandotte Yearbook. While it may be true that there are some statements made in Mr. Martin's Yearbook which may run counter with the convictions of others who are breeding White birds, and may incline them to cross swords with Mr. Martin as to his claims, we are, however, of the opinion that every statement made by Mr. Martin with regard to feeding for whiteness in plumage, beauty and utility of the White Wyandotte, are but natural and consistent with his convictions as a White Wyandotte breeder.

Years ago we verified the statement which Mr. Martin has recorded in his 1915 Yearbook, so far as the feeding of yellow corn affecting the plumage is concerned, but the writer was termed by many other breeders as visionary on this important subject. However, within the past year or so, we have had the pleasure of meeting dozens of breeders of white birds who have substantiated our claims and demonstrated to their own satisfaction that yellow corn, fed during certain periods of the bird's existence, will, to a greater less degree, affect the whiteness of its plumage. Another feature of Mr. Martin's catalogue which appeals to us greatly is its practical side, relating to the amateur breeder. In this respect, Mr. Martin is to be congratulated upon the frankness with which he expresses himself, together with the detailed account in that portion of his Yearbook which explains the conditioning and preparing of white birds for the show room, as well as his method of curing the different diseases which, from time to time, find a way into the poultry yard. This catalogue also contains many striking illustrations of Mr. Martin's Poultry Plant, the beautiful Silver lake which borders a portion of Mr. Martin's farm together with a number of pen and single bird cuts, showing the ideal shape of the Regal White Wyandotte. We spent at least one and one-half hours studying Mr. Martin's Yearbook and after we had completed its study, we decided to take it home as a souvenir.

We would recommend to everyone who desires one of the best catalogues evr compilled, and especially those who are interested in White Wyandottes, to write Mr. John S. Martin, Port Dover, Ontario, Canada, for a copy of the Regal White Wyandotte book for 1915. Its contents, will, without question, appeal to you in like manner as it has to the writer, possible, however, in a greater or less degree.

PREPAID EGGS FOR TESTING.

For years past Judge Townsend, of the Court of Special Sessions, has been conducting, at his own expense, a series of valuable poultry tests. He makes no charge for entries, and his tests cover laying, hatching, day-old chicks, brooding, feeding, etc. Birds from our greatest breeders are entered here, and nowhere else.

This sasson Judge Townsend will give special attention to the laying qualities of high grade exhibition stock. To broaden these tests he will supply a few eggs—Rocks, Reds, Orpingtons, Campines and Leghorns—Express prepaid. Reports required on hatching, growth, etc.

Send stamp for particulars and agreement to C. F. Townsend, Weedsport, N. Y. tf

JIM ROHAN OFFERS $800 IN GOLD.

Free Book "Hatching Facts".

Tells All About It.

Jim Rohan's offer of $800 in gold to poultry raisers is attracting wide attention.

The offer is open to men, women, boys and girls of any age—anywhere—and the conditions are made so easy that every one would do well to investigate.

Any reader of this paper can get the full particulars by writing to Jim Rohan, President, Belle City Incubator Company, Racine, Wisconsin.

Unless you have the particulars you may be entitled to a share in the gold without knowing it, and Mr. Rohan will not know it unless you write to him, so our advice to every reader is to write.

In reply you will receive Mr. Rohan's new big Free Book "Hatching Facts" just published. The book explains everything about the $800 gold offer, making it easy for every one, whether an experienced or inexperienced poultry raiser, to go after the gold.

The book also illustrates and describes Mr. Rohan's Incubator which is now known as the 21 Times World's Champion Belle City. The Belle City had 8 championships at the beginning of 1914—in the championship contest of 1914 the Belle City hatching outfits entered by owners took 13 more World's Championships, nearly as many awards as all other machines put together, regardless of price. Mr. Rohan did not know the names of the Belle City Championship prize winners until they were published. He added $100 in gold to the prizes they had already received.

The Free Book "Hatching Facts" tells the whole story. It shows a wonderful large reproduction of the 21 Times World's Championship Belle City Incubator and the Belle City Brooder in actual colors. Many photographs of Belle City prize winning hatches also appear. The book gives in full Mr. Rohan's personal 10 year money-back guarantee, and the one, two, or three months' home test which Mr. Rohan allows on his hatching outfit. Altogether it is a valuable book and should be in the hands of every one who thinks of buying an Incubator or Brooder. A postal will bring the book. Address Jim Rohan, Pres.,

Belle City Incubator Company,
Racine, Wisconsin.

Shipping Eggs For Hatching.

By Mrs. George W. Church,
Townville, Pa.

Very soon thousands of eggs will be shipped to fill incubators and also to set under hens.

That they may reach their destination in safety, care must be exercised in packing.

However, the packages are often handled so roughly in transit that many eggs and even the container is smashed.

Some breeders are seemingly very careless about packing but I think the majority do the best they know how and really hope to have them go safely and hatch well.

I have tried various methods of packing, different makes of shipping boxes and of them all, prefer baskets and excelsior.

It is more work to wrap each egg in paper and then in excelsior than it is to drop the egg into a compartment of a patent shipping box yet, so far as my observation goes the basket packed egg hatches best.

Runner eggs are too large to pack in the patent cases unless one selects the smallest eggs and this of course is a very poor plan.

When packing in baskets a lining of paper is put in, then a layer of excelsior over the bottom and extending two or three inches up the sides. Wrap each egg in a soft paper then in excelsior and pack closely in rows until the bottom layer is complete. Cover this with a layer of excelsior extending up the sides and repeat the process until the required number is packed.

Put a generous amount on top so the top layer will not be in danger of being broken if anything hits against it.

Over the top, sew a cover of burlap or muslin and paste on the lable which tells the contents of the package and the address of the person to whom it is sent.

WM. R. THOMAS GETS RECORD HATCHES.

Mr. William R. Thomas of Oak Flat, Arkansas, set his Progressive Incubator twice last season and brought off 100 per cent each time. He says that the Progressive Brooder is fine. Results like this are said to be quite an ordinary thing with the big 155-egg Progressive Incubator. Its exceptional hatching record is attributed by the makers in a large degree to the fact that the eggs are protected against sudden changes in temperature by hundreds of dead air cells. This year the Progressive Incubator Co., Racine, Wis. are building all wood parts of genuine California Redwood.

Barred Plymouth Rocks

RINGLET STRAIN.

Eggs for hatching from either prize winning stock or utility stock at from $1.00 to $5.00 per 15. Baby chicks from utility stock only at 15 cts apiece. Also few choice breeding Cockerels at $2 and $5 apiece.

RIVERDALE POULTRY FARM,
Morris Moyer, Prop.,
Schuylkill Haven, Pa.

A FEW HOURS WITH MEN WHO RAISE CHICKENS

By F. D. SUTTON

Owen Farm's Mating List.

We have just received the 1915 Owen Farms mating list, which gives full and definite information with regard to all the matings on the Owen Farms for the year of 1915. It is a straight forward and convincing compilation of facts, which, without question, will have its desired effect upon all who receive the same and who anticipate purchasing hatching eggs from high quality exhibition or utility stock during the coming season. Everyone who is acquainted with Maurice F. Delano's method of doing business with his great army of customers, knows full well that he or she will receive full value for every dollar entrusted to his care. We would advise all our readers to write Mr. Delano for this mating list at once, especially if they are interested in Buff or White Orpingtons, White Plymouth Rocks, White Wyandottes, S. C. Rhode Island Reds or S. C. White Leghorns. It is free for the asking. Always address, Vineyard Haven, Mass.

Marshall Winter-Egg Yards.

The Marshall Winter-Egg Yards, of 1015 Webster Ave., Scranton, Pa, have some unusual offerings for their customers this season. Their Single Comb Buff Orpingtons have proven a great surprise, from a utility standpoint, to everyone who has been fortunate enough to secure either stock or eggs from this popular farm. The Proprietor advises us that yards A and B are all trap nested birds with unusually fine records as layers, as well as splendid type, color and size. In their yards C and D, the pullets used here are from trap nested hens and contain the same blood-lines as the best stock in the Marshall Winter-Egg Yards.

Pastime Farms.

The Pastime Farms of Allentown, Pa., A. H. Balliett, Proprietor; Stanley Mason, Superintendent, is one of the most noted, popular and up-to-date poultry farms to be found anywhere in the United States, baring none. Mr. Balliett, Proprietor of the Pastime Farms is simply raising poultry because of his love for the feathered kingdom. He is not dependent upon the revenue secured from his poultry plant for a living as he is one of the largest Cigar Box Manufacturers in the world, and the equipment in his manufacturing establishment comprises the latest possible improvements to be found in any Cigar Box Manufacturing institution in this or any other country. Mr. Balliett secures his lumber by the ship load from Cuba and uses nothing in his Cigar boxes but Cuban Cedar of the very finest quality. He ships his product to all sections of the United States and is scarcely able to meet the enormous demands made upon him from time to time.

Returning again to the Pastime Farms, of which Mr. Balliett is Proprietor, we desire to call the attention of our readers to the different buildings located upon this plant. There is one building 110 feet long and 40 feet wide, containing four stories, with a total floor space of 17,600 square feet. This building is equipped with every known apparatus necessary for convenience to the care taker, as well as the comfort of the birds. It is fitted up with exhibition coops, display pens, and in fact, this building alone contains a vertiable poultry and pet stock show in itself.

The brooders house on the Pastime Farms is 40 by 60 feet, the laying house is 14 by 140 feet, all constructed on the open front plan. There are about 100 colony houses, 8x8, so constructed that two men can carry them anywhere. They are made of the best white pine lumber, are thoroughly painted and kept in perfect condition. The pullet house is 16x30, the Duck house 9x10, goose house 9x10, with other houses unler way of construction in this department of the Pastime Farms.

Mr. Balliett is breeding over 50 different varieties but he is making a specialty of Faverolles and has secured many of the best birds to be found anywhere in the world. His stock is all imported and judges of note, who have visited the Pastime Farms, declare that no finer Faverolles can be found in this or the old country.

The farm is situated on the South side of the hill and comprises one of the most ideal locations to be found anywhere in this state. Visitors are always welcome. The best way to get to the Pastime Farms is to go to Allentown, Pa., take a trolley at Allentown and tell the conductor to let you off at the depot on the Pastime Farms. The fare is only 5c and either Mr. Balliett or Mr. Mason will show all visitors every possible courtesy.

H. V. Tormohlen.

At the Cleveland, Ohio Show, H. V. Tormohlen, of Portland, Indiana, one of our most prominent Brown Leghorn Breeders, sprung a sensation on other breeders of this variety of the Leghorn family by winning 1st and 2nd cocks, 1st hen, 1st, 2nd and 4th cockerels, 1st, 3rd and 5th pullets, with an entry of only nine birds. Mr. Tormohlen's first cockerel was given the championship of the Mediterranean class, winning best bird in a class of over five hundred birds. The above was an unusual victory when one takes into consideration the fact that it is so hard to get Brown Leghorns bred true to color and type at the same time. The victory is all the more apparent in the face of the fact that Mr. Tormohlen's cockerel competed against the whites, of which there were fifty cockerels in this class alone. We have heard many words of praise concerning Mr. Tormohlen's Brown Leghorns, especially concerning their color and type, a combination which is very difficult to secure in the Brown Leghorn family

Mr. Tormohlen through an accident, entirely out of his control, lost 1st pullet, winning second, but bought the pullet that one 1st prize, which makes his awards as per the above statement in this reader. The judge informed Mr. Tormohlen that his pullet was the best bird in the pullet class and had she not met with an accident en route, she would easily have stood the winner in her class.

Erie, Pa. Show Great Success.

The show held at Erie, New Year's week, was a very pleasing success in every way. The quality of birds were unusually good—especially was this true in the Barred and White Plymouth Rock allies, as well as the Single and Rose Comb Rhode Island Reds and the Single Comb Black Orpingtons. There was a splendid variety in the Pigeons, Pheasants, Ducks and Turkey classes. The atendance was very good, and the asociation, after paying all obligations had a nice bank balance left with which to begin boosting for a greater and better show next winter. This information we have received from Mr. J. S. Boyer, Secretary of the North Western Pennsylvania Poultry Pigeon and Pet Stock Association and it certainly affords us great pleasure to publish the same.

EL-CO-VA FARM

White Wyandottes S. C. Anconas

Best Matings—$5.00 per setting of fifteen eggs.
Second Best Matings—$3.00 per setting; two settings, $5.00.

PENNSYLVANIA CHICKEN CHATTER

JAMES T. HUSTON
Williamsport, Pennsylvania
Editor

Feb. the month of eggs, and little chicks, it comes around before we hardly realize it, yet if we are to be the successful ones at next seasons Fairs, it should be upper-most in our minds. Are you ready? Are your birds in condition to produce you good strong early chicks? If not you have only yourself to blame.

Never before in the history of exhibition poultry, have the larger poultry shows been more successful, from the view point of number of entries, and quality of exhibits, as the season just closed. Is this not encouraginv to the breeder? When all conditions are taken into consideration, it has been a remarkable year, surely nothing to be discouraged about.

We read with interest a communication in the Jan. Poultry Item regarding the cancellation by a certain show of one of it's judges. The author of this communication is very severe on the show management of the show in question as well as any other show, which would make any change from the list of judges appearing in the Premium Lists, etc.

While the motive of the communication is right, at the same time, we feel that "Jefferson" has had perhaps more experience from an exhibitors or judges standpoint, than from any real knowledge of the trials, etc. of our Poultry Show Managements.

Almost all our Premium Lists to-day, prepare for the very occurance here mentioned namely; the necessity of making a change in a judge at the eleventh hour, these changes are seldom or ever made from any fault of the Show management, but from causes from which they have no alternative, for that reason you find as a defined rule "That this association reserves the right to hire additional judges, or vary from the above assignment." We have known where judges have been changed, for the reason of sickness, unable to reach the show in time, wrecks, and in some instances where the judge has not reported in time, or in condition to do the best of work. One judge not reporting for work, in many instances has changed the entire assigning of judges. We believe no one feels these necessary changes or takes them more to heart, than the officers of any well regulated show. The Exhibitors, Fanciers, and Judges owe more to the men who are putting on our big Poultry Shows of to-day, than they can ever repay, if it were not for these men who labor for many weeks every year, we fear the poultry industry would fall flat. We know of few Shows in the Country, where the officers are receiving a penny for their services, and the judges as well as the poultry fancy must show some appreciation of their efforts, or we fear the time will come when they will cease their efforts to give us our annual exhibitions.

Both Canton and Cleveland, Ohio broke the records for both size and quality of their 1915 exhibitions, here is one of the greatest poultry States in the whole Country, and therein will be found some of the best breeders and fanciers we have in the business.

We cannot quite understand how if the men who are back of the Panama Exhibition Poultry Show, desire that it's influence should be World Wide, that they would not be more considerate in that the dates fixed should be the best for all concerned. We do not think the show should start at least before Oct. 1 and this is really a conflicting date for two of our largest Fall Fairs.

Philadelphia this year gave an exhibition which excelled in quality and numbers any of her previous shows, and we believe it will be of lasting good to the poultrymen of the East. Mr. Riley Pres. of this Show, has for years bore the blunt of the work of putting on this exhibition, and to much credit cannot be given this true blue fancier for the success of the 1914 exhibition. It is men of Mr. Riley's ability who are the foundation of the industry.

Now let us all start in the season of 1915 with the express purpose of making this the greatest season in the history of pure bred poultry. Put down crookedness of all kinds, and in selling your stock and eggs, treat your customer, in the manner in which you would desire to be treated, were you in the place of the buyer, by so doing you are helping make th poultry business, that which it rightfully is, a business for the gentleman always.

COMMUNICATION.

By M. K. Bemis, Chairman Com. on Publicity, Arizona State Poultry Association, Box 1350, Phoenix, Ariz.

The third annual meeting of the Arizona State Poultry Association was held Saturday, January 9, in Phoenix. The meeting was largely attended and was entirely harmonious, and much enthusiasm was manifested. A vote of thanks was given the retiring officers.

W. W. Carney of Mesa was elected president, George Mears, of Phoenix; vice president; H. G. Powers, R. F. D. No. 2, Phoenix, re-elected secretary; Mrs. G. W. Mears, re-elected treasurer. Executive Committee, C. B. Wood, Ernest Hall, Dr. Barackman, W. O. Ferris, Marshall Humphrey, M. E. Bemis, J. F. Warner.

A legislative committee consisting of C. W. Alexander, C. B. Wood, and Mrs. F. A. Weage were appointed to take up the matter of legislation, relative to the regulation of the sale of cold storage products.

Over twenty new members were elected, and the indications are that many more will join. Ernest Hall former president, and Chairman of the committee on membership announces that he will give a pen of White Plymouth Rocks to the member securing the largest number of new members before the February monthly meetin, provided that at least twenty must be presented.

A Year Book is to be published with each members name, and the breed which is keeping. A program of the monthly meetings is being prepared, and will be published in the Year Book.

It is important that all old members pay their dues at once, and those desiring to join, make application immediately to insure having their names published in the Year Book.

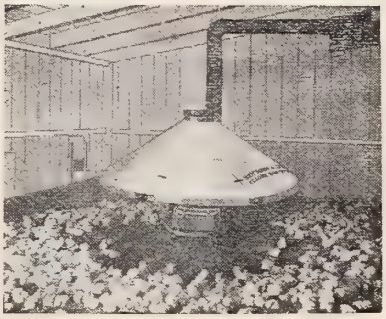
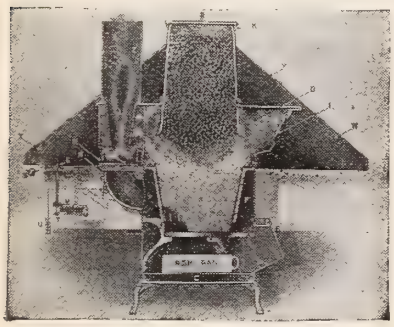
RAISE MORE AND BETTER CHICKS THIS YEAR.

Here's A Practical Suggestion.

It is not too much to say that no other part of poultry farm equipment is more important or has a greater influence on the business of poultry raising than the brooding outfit. Realizing this, the progressive poultry raiser will only be satisfied with the best procurable brooder, will not hesitate to discard unsatisfactory equipment and replace it with that which is most efficient.





The manufacturers of the Newtown Giant Colony Brooder claim that this remarkable chick-raising machine is superior to anything of its kind now on the market. And they stand right behind this statement with a square money-back guarantee which fully protects every purchaser. You are safe in buying a Newtown. It must please you —and it will!

Poultry equipment is not perfected in a single day. The process of evolution works here as in all other lines of human endeavor. The Newtown Giant Colony Brooder has passed through years of practical test in the hands of poultrymen in all parts of the world. As a result of such wide experience this brooder has been brought to the point of absolute perfection in every detail of construction.

This point should be kept in mind by brooder buyers. The Newtown is not an experiment—it has made good. Untried machines may do their work well —you know that the Newtown will. The purchaser of this time-tested brooder runs no risks; he knows that it will give complete satisfaction. The testimony of thousands of enthusiastic users proves this.

The Newtown Giant Colony Brooder is the pioneer coal-burning brooder of this type. It is self-feeding and self-regulating, entirely automatic in operation; free from fire danger; convenient and inexpensive to operate; built entirely of cast iron—excepting the heavy galvanized deflector—and will give the best of service for years; freely vntilated; allows each chick to find the exact temperature it prefers; may be operated in any building; RAISES THE CHICKS with practically no loss and at lowest cost for labor and fuel.

The Newtown Giant Incubator Corporation, 29 Warsaw St., Harrisonburg, Virginia, will send complete catalog and helpful "chicken literature" free upon request.

ALTOONA, PA. POULTRY SHOW.

The Sixth Anual Poultry Exhibition held by the Pennsylvania State Fanciers' Association, Altoona, Pa., during the week of January 11th, 1915, was the most successful show which has been held in that city. The quality of birds shown this year was far better than that of previous shows. Judge Herman A. Hoke, of Spring Forge, Pa., who placed the awards on poultry, gave universal satisfaction, not a single objection having been brought to the attention of the Association. Mr. Thomas J. Patschke, of Altoona, Pa., one of the best pigeon breeders in this section of the state, placed the awards in the pigeon classes to the entire satisfaction of all exhibitors. The Association has decided to make their next premium list very interesting to all exhibitors, and would be glad to have all poultry breeders' names on their mailing list. This is one of the shows that pays premiums and delivers all ribbons before the close of the show; and this practice is standard for future shows.

Their next show will be held the week of Jan'y 10, 1916, the second week of January being their permanent show time.

NOTICE.

Tacoma, Wash., Jan. 4, 1915.

H. I. Co.,
Salem, Va.

I inoculated 17 sick birds at the Tacoma show with "OCULUM". Results fine. Birds on road to recovery in 24 hours. The cages of these birds are the center of interest. It was a splendid opportunity to show the public we **had the goods** and **results** which was a great thing in this day of fakes.

C. E. Cornell.

Ideal Colony Brooder

Coal Burning—Self Regulating

100 per cent. efficient. Economical and safe. Superior to all burners. Large and small farms are using the Ideal with success. The only system giving perfect satisfaction. Write for booklet describing the

IDEAL COAL STOVE BROODER

Price $17.

With Regulator $22.

Liberty Stove Co., Dept. F, Phila., Pa.

Valuable Seed and Poultry Book

Illustrates and gives prices of 45 varieties of land and water fowl. Gives remedies for poultry ailments and general information every farmer and poultry raiser should have. Send 2-cent stamp.

Pine Ridge Poultry Farm

Freeport, Ill.

$15 THE STANDARD COLONY BROODER $15

All Solid Cast Iron

Complete with chick-proof double disc, automatic, accurate and powerful regulator. Burns hard coal or natural gas (oil too expensive). Larger coal capacity than any brooder-stove made, and on account of its scientific construction, will radiate more heat on less coal and burn longer. It will work in the smallest room or the largest with equal results. Large self-feeding magazine. Perfect and positive ventilating system which insures pure atmosphere at all times. Large size genuine rocker furnace grate that will drop more clinkers than any other, regardless of size, and will not clog. No comparison to the cheap draw center shake and dump grates. Large 52-inch removable hover with curtain coming to within 2 inches of litter, preventing chilling of chicks and insuring accurate regulation of temperature and stopping drafts. Burns 12 to 48 hours on one coaling.

Write your own money back guarantee.

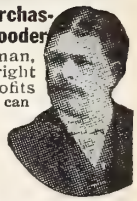
SUCCESSFUL Poultry Lessons FREE

20 Lessons FREE to Everyone Purchasing a Successful Incubator or Brooder



Let Gilcrest, the successful man, start you right—keep you going right—and help you cash in on the profits this season that you hope to make, can make and deserve to make raising chickens if you start right.

Successful Incubator and Brooder

J. S. Gilcrest, Pres.

These 20 Poultry Lessons Are Really Worth $25 or More You get them FREE with the Incubators *guaranteed* to hatch larger and stronger chicks and a larger percentage than any other incubator when operated under the same conditions. One of the oldest and most successful makes of Incubators sold today. Incubators that "make good" because they *are* made right. Remember Gilcrest handles high-grade poultry, too—stock and eggs of all leading varieties—land and waterfowls.

Successful Grain Sprouter

Built of all steel sections—fireproof. Changes 1 bushel oats into 3 bushels fresh, green, egg-making feed. Makes hens lay in winter. Send for free descriptive circular and low prices.

Write for Catalog of Successful Incubators and Brooders. Enclose 10c if you also want "Proper Care and Feeding of Chicks, Ducks and Turkeys." But write for Incubator catalog sure anyhow.

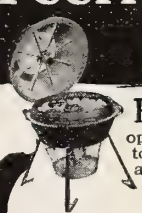
$6.75 and Up

Peerless Automatic Incubators Now 60 to 1,000 Eggs



EVERY Sheer Incubator is a marvel of automatic mechanism. Heat and flame control, heat distribution, heat regulation, ventilation and moisture, every operation **automatic.** Only one adjustment. Biggest profit hatchers on earth today. Whether raising poultry 60 eggs at a time or on a large scale, there's a SHEER AUTOMATIC OUTFIT to suit your needs.

THE SUREST HATCHERS

The new "Peerless 60" is the first practical, all-metal fire-proof incubator with perfect heating, heat distributing and ventilating systems—all automatic. Natural as a nest. Never overheats. No fussing. Automatic flame control—no waste of fuel or heat. Fully equipped with wonderful Sheer Automatic Fixtures. **More profitable** than any large machine with single heating plant. Holds 60 eggs. A marvel at the price.

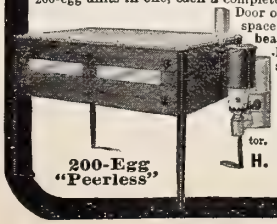
1000 Egg Multi-dek

"Peerless Automatic" 200-Egg

is just big enough for the poultry raiser who wants to start small and grow big gradually. Equipped with the great Sheer Automatic Heating, Ventilating and Moisture Systems, Automatic Flame Control, Automatic Lamp, Sheer **Double-Compound Thermostat Regulator**—exclusive Sheer features that make the **surest hatchers in the world.** No more guesswork. The Sheer way is the only way.

"Peerless Automatic Multidek," 1000-Egg

is the biggest improvement in incubator design in the last generation. Not one big unit, but five 200-egg units in one, each a complete self-operating incubator, yet all 5 operating in **perfect unison.** Door of top section on a level with your eyes. Saves 6 times floor-space. No waste labor, everything within arm's length. **A world beater for profits.** Equipped with wonderful SHEER AUTOMATIC FIXTURES. Only machine for the big poultry raiser. Starts small raisers to big success.



200-Egg "Peerless"

Make Any Incubator Automatic

If you can't afford a new machine now, make your old incubator new and AUTOMATIC. Sheer Fixtures, Automatic Lamps, Regulators, Thermostats, heating, ventilating and moisture systems, incubator parts, fit ANY incubator. 25 years have made them the world's standard. Send today for facts, Free.

World's Largest Manufacturers of Incubator Supplies

SUCCESS OR FAILURE IN 1915?

Which Shall It Be With You?—Much Depends Upon Your Matings and the Judgement Used in the Breeding Pen. The Use of Incubators is Urged for Early Hatches. Report of the National Egg Laying Contest for December.

The approach of spring is a happy season for the poultryman as well as the spring poet, but, unfortunately, we have too many poultrymen who confine their enthusiasm largely to these months as do many of the sentimental writers of springtime literature. We cannot impress upon you too strongly that the poultry work is a year-round business and cannot be neglected at any season, but there are more points to be looked after at the approach of the breeding season than at any other time. You are then laying the foundation, and upon the intelligence that you use at this time, largely depends your future success. Look well to your matings for 1915.

You should have by this time fully made up your mind as to the breeding pens. This work cannot be done in a day and you should have records kept throughout the year that will enable you to do away with guess work and mate with accuracy. Now it is true that everybody cannot use the trap nest, but even the man with one pen of fowls can toe mark and leg band his chickens and have ways of identifying his flock so that he may do the work of mating with intelligence.

We wish to especially urge you to study the Standard and the requirements for your variety. The new Standard is now ready and your birds should be mated with that in view, as it will be the judge's guide at the poultry shows next summer and fall. Get the Standard at once and take another look at your pens to see if you can make any further improvement in your 1915 matings. We feel confident it will be the best Standard ever issued. We hope it will prove to be at least.

Don't overlook vigor or vitality in every bird in your pens. That should always be the first requirement for without that, your birds cannot retain their good shape, their brilliancy of plumage, or be good producers from any point of view. Breed from males and females that have been good producers or that have been bred from good producers. Don't forget that the egg basket is where most of the profit is, and that eggs represent more than half the income from this great industry.

You should also realize the importance of hatching at least a few early chicks. The Great Panama-Pacific Exposition takes place this year, and the poultry show at that place will be one of the largest and best ever held in this or any other country. It should be the ambition of all to breed at least a few birds good enough in age and quality to win the blue at this show. Also, if you are going to exhibit at the State and County Fairs, you need at least some early hatched stock.

In some sections of the country, February and March are excellent months to raise poultry, and it is possible to produce birds that will lay eggs during the early months of fall when eggs are the highest, birds that will be in prime condition for the early show rooms, and that will be mature enough for breeders the following season. The hatch may not be quite so good, but if you will provide comfortable quarters the chicks will be freer from disease and vermin than when hatched later in the season. Then, too, those birds that you wish to cull out bring a good price on the market as broilers. In fact, reaching the market with early broilers is one method by which paying returns are brought to the specialist who raises fowls for the market.

For the above reasons and for others which might be stated, we think that every farmer and every poultry raiser should have at least one good incubator holding 120 eggs or over. It is the pactice of too many people to set the first hens which go broody in the spring and these are usually the very hens which they should breed from and should be kept laying. These hens are the ones which had the vitality to lay in winter when eggs were highest Start the season of 1915 right and you will find pleasure and profit later in the poultry business as a result of your carefulness and common sense used at this time.

The National Contest.

There are 75 pens of five pullets each, representing 26 different varieties, engaged in this contest. The ground was covered with ice most of the month of December and it was very cold and damp. This affected the birds more or less which came from other climates. They are practically all in fine condition at the present time and the indications are that they will now begin to lay in earnest. Some are not mature and have never begun to lay. Most of those that were laying when they reached this place went into a mouth. Many of the dropping boards and floors hae been covered with feathers the past two months. The birds will be held back more or less by weather conditions until well up into February. We believe that all pens will soon begin to make up for lost time, and the race will then be on in earnest.

Pen No. 52, Buff Orpingtons, from Pennsylvania, won the silver cup for the best November record, and Pen No. 75, Rhode Island Whites, from Illinois, won the cup for the best December record. The best individual for the two months is a Barred Rock from Illinois, No. 412, in pen No. 67, and has laid 37 eggs.

The Missouri Contest.

In this contest there are 52 pens, five pullets each, representing 22 varieties. The 260 hens have laid 2693 eggs in

the two months. They laid more in November than they did in December for the reason that we had to move them to new and strange quarters after the contest was started.

Pen 24, White Wyandottes, won the silver cup for November, and Pen 34, Barred Plymouth Rocks, won it for December. White Leghorns are not getting such a start in the larger varieties as they did in the two previous contests. The highest individual in this contest is a S. C. White Leghorn, hen No. 44 in pen four, and has laid 41 eggs in the two months. The leading pen in this contest is 11 eggs ahead of the leading pen in the National Contest.

The ten leading pens are as follows:

Pen 26, Buff Wyandottes, 131 eggs.
Pen 24, White Wyandottes, 126 eggs.
Pen 36, Buff Plymouth Rocks, 124 eggs.
Pen 38, White Plymouth Rocks, 117 eggs.

Typical scene on the Poultry Farm of W. W. Kulp, Pottstown, Pa.

Pen 49, Black Langshans, 112 eggs.
Pen 40. Barred Plymouth Rocks 108 eggs.
Pen 29, Silver Wyandottes, 97 eggs.
Pen 6, S. C. White Leghorns, 92 eggs.
Pen 0, S. C. White Leghorns, 87 eggs.
Pen 4, S. C. White Leghorns, 78 eggs.

In these two contests the following varieties are competing:—Buff, White, Black and Blue Orpingtons; S. C. White, R. C. White, S. C. Black, S. C. Buff, S. C. Brown and Dominique Leghorns; White, Buff, Silver, Columbian and Silver Penciled Wyandottes; S. C. Reds and R. C. Reds; S. C. and R. C. Rhode Island Whites; Barred, White and Buff Plymouth Rocks; Anconas; Silver and Golden Campines; Blue Andalusians; S. C. White, R. C. Black and S. C. Black Minorcas; Buttercups; Black and White Langshans, and Missouri White Flufs, a total of 33 different varieties. This is the greatest number of varieties ever engaged in a contest anywhere in the world.

Our Experimental Pens.

We have a number of experiments, the results of which will be reported each month. In one pen we have 80 S. C. White Leghorns on free range in a woods pasture, and in an open front house. They have corn, wheat and dry mash in hoppers at all times. All we do here is to water the fowls, clean the houses, gather the eggs, and fill the hoppers once a month. We will compare the results with similar flocks where the hens are hand fed in a deep litter.

Another experiment is a pen where the hens get nothing but whole grain and no grit.

We have three experimental pens in a feeding test; one where the food is practically without mineral matter; another where the food is largely free from protein; and the third where the food contains but little fat building material. The egg is made in a large measure of minerals, found in the shell, protein contained in the white, and fat found in the yolk. The purpose of the experiment is to find the effect upon the egg and the genral health of the fowls.

Other experiments will also be reported from time to time.

MANFACTURERS SELL OVER SIX THOUSAND OF THEM WITH ONLY THREE COMPLAINTS.

We show here an illustration of a new 60 egg incubator that the Buckeye Incubator Co. put on the market during the latter part of last season.

Without spending a penny on advertising this machine, they sold over 6000 of them UNDER AN ABSOLUTE GUARANTEE to hatch every hatchable egg and out of that entire number they had just three returned—and all of the three returned had been damaged in transit.

Ferde Kolbe, of Long Branch, N. J., bought one of them and he writes:—

"Yes, I bought one of those little 60 egg Buckeyes last season and believe me it was almost human. I set my machine three times with 180 untested eggs, and hatched out 161 strong chicks—not one cripple. They are really so little trouble you don't know you've got an incubator."

An absolutely dependable incubator of this size is just the thing for small breeders and almost indispensable to the big breeder with special matings.

The Buckeye Incubator Co. at Springfield, Ohio will be glad to send full information to anybody who mentions this paper.

R. O. Umholtz's Mother Dies.

It is with regret that we learn of the death of the mother of the Secy. of the Pottsville Show, Mr. R. O. Umholtz. This along with the great disaster of the fire which swept the business district of that City, all occuring at the time where Mr. Umholtz was deep in the troubles of a Poultry Show, makes our sympathies the greater.

Harrisburg, Pa., Quality Show.

Harrisburg, Pa. again put on a good one, and are at it again for next year, assuring the breeders of Central Penna. that this Show is a permanent fixture. With men like Mr. W. F. Fisher and the other officers, we look for a still greater show next Dec.

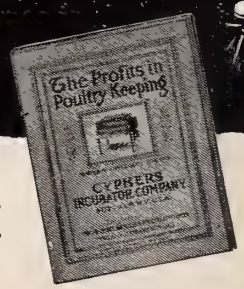
SENT BY PARCEL POST: Let us show you **how** we car send you these wonderful coops by **Parcel Post Delivered** to your home for less money than you can purchase coops of inferior quality for in your city.

We also make a specialty of benching shows on a rental or we will sell you the entire outfit. In any event get our prices and terms before placing your order. We can please you and save you money. Send for catalogue.

KEIPPER COOPING COMPANY
1401 First Street Milwaukee, Wis.

You Are Entitled To A Cyphers Built Incubator From $10.00 Up



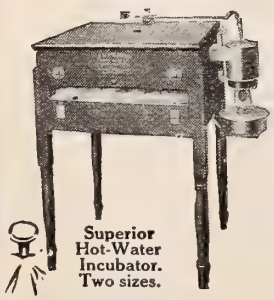
THREE styles, all our own design, built exclusively in our new factory, each fully guaranteed by the Cyphers Company—regardless of price. This means a new degree of confidence for users of low-priced machines. You can now have Cyphers certainty of results with least outlay.

New Superior Hot-Water Hatcher

Cyphers Superior, ***forced water circulation,*** automatic ventilation. Roomy chick nurseries under egg trays. Two sizes: 65 eggs, price complete, $10.00; 130 eggs (illustrated herewith), price $14.00. Fully guaranteed.

New Columbia Hot-Air Incubator

By all ordinary standards the Cyphers Columbias would take ***first place*** among hatchers. Same regulating system as our ***highest priced*** machines. Substantial wooden case. Positive ***automatic*** ventilation. Two sizes: 140 eggs, complete, $15.00; 250 eggs (see illustration), complete, $19.00. Fully guaranteed



Superior Hot-Water Incubator. Two sizes.

Columbia Hot-Air Incubator. Two sizes.

Standard Cyphers Incubators

They represent all that scientific and ***practical progress*** has accomplished in incubator building. Given fertile eggs these machines recognize no obstacles of climate, weather or trying conditions generally. In ***every land*** they are making money for their owners, with least trouble and ***surest*** profits. Their value ***still remains unequaled,*** as stated by tens of thousands of owners. Four sizes: 70 eggs, complete, $15.00; 144 eggs, complete, $22.00; 244 eggs, complete, $32.00; 390 eggs, complete, $38.00. Satisfaction guaranteed or your money back.

All prices herewith apply east of Rocky mountains, north of Texas and south of the Canadian line. In high freight territory slightly higher prices. Write today for our 1915 Year Book. More helpful than ever. Address our place of business nearest you.

James T. Huston, Box W, Williamsport, Pa.

Aldrich White Orpingtons

At the Great Madison Square Garden Show, February 12th, 1915

we again carried off the MOST COVETED PRIZES, winning 1st Cockerel and 1st and 3rd cocks on the five entries made in these two classes and many of the other prizes were won by our customers.

We have decided to supply eggs from our Pen 9, headed by our 1st Prize Cockerel, at the very low rate of $15 per setting to those who book their orders in time, as at this price we cannot supply the demand for eggs from this pen.

They Lay in Winter When Eggs Are High

At the National Egg Laying Contest at Mountain Grove, Mo. for January, 75 pens competing, an ALDRICH WHITE ORPINGTON STRAIN PULLET entered by a customer laid the GREATEST NUMBER OF EGGS OF ANY FEMALE IN THE CONTEST. If you wish the best stock or eggs from either exhibition or utility, write for our catalogue, and let us quote you prices. Would advise early booking for eggs.

ALDRICH POULTRY FARM, 6058 N. High St., Columbus, Ohio

25¢ for THREE MONTHS

To put the big $1.50 national farm weekly at once into half a million farm homes, the next 13 issues of THE COUNTRY GENTLEMAN will be mailed to your address for 25 cents—less than two cents a copy.

The Biggest Poultry Profits are Made in Three Ways

1. Breeding High Layers
2. Hatching Baby Chicks
3. Fattening Dual-Purpose Breeds

We sent the most expert poultryman we could find on a trip through the great poultry states to visit practical plants and discover how the profit-paying plants are run. He traveled hundreds of miles and talked with poultrymen big and little. He got the facts. He has written his observations and advice in a number of special articles to appear in THE COUNTRY GENTLEMAN in 1915, including:

The Truth About Baby Chicks
Lessons From the Laying Contests
Where the 200-Egg Hen Comes From
Simplified Feeding for Eggs and Meat
Brooding Without Frills

and many other topics connected with up-to-date poultry raising. Many other poultry experts will also contribute practical articles during the coming season on home and commercial poultry keeping. You will get these articles in THE COUNTRY GENTLEMAN if you subscribe now at the special introductory rate—25 cents for 13 issues

Ask Us Your Hard Questions

Our expert poultry advisers will answer any questions you send us. They will plan your chicken houses, yards, nests, feeding devices, water systems, give balanced rations, tell you how to breed your flock, outline selling methods, and so forth. This service is absolutely free; individual replies will be sent *by mail.*

You will also profit by the articles on gardening, fruit growing, beekeeping, livestock and general farming that every issue contains.

Nat. Game Fowl Journal, Washington, D. C.

SELECTED OPPORTUNITIES

The Money Making Book You Are Looking For

No Excuse for Hard Times. **Here Are 24 Opportunities to Get Money**

ONLY $1.00 POST-PAID

"SELECTED OPPORTUNITIES" is the name and it is what hundreds of hustlers all over the country are waiting for! It is the most valuable book of business chances that ever came from a press.

This book is not a rehash of old cheap "schemes" and recipes; every one of the 24 business plans given in the book has been dissected by an expert business plan builder, and stamped with his approval.

Every one, yes, every one, can surely find within this book something adapted to his condition; something that will make him money if earnestly applied. The author doubts not that 10—20 years from now will be found persons at the head of prosperous businesses which had their inception from some plan described in this new book of modern business plans. The compiler of this book is well known throughout the country as a deviser of business plans. He has gone on record as saying that if one of his clients were to pay him $50.00, he could devise nothing better than some of the business plans given in Selected Opportunities.

Space forbids more than a simple synopsis of the contents:

Section 1. A Local Business now in operation in one or two localities. Strictly new, high class, easily handled.

Section 2. Another Local Business, good for big profits. Any person of ordinary intelligence can operate it. Attractive, high class. This idea will "start you going" as quick as you see it.

Section 3. A Mail Order plan. New, original, sensible. A new, substantial plan for starting a Mail Order Business along a practical line. Everything is given.

Section 4. A neat Local Business. A "homely" plan but a money-maker. It should be good for $15.00 weekly.

Section 5. An unusually high-grade Business Proposition. $25.00 to $100.00 capital should be employed and the possibilities range up to over $10,000 profit.

Section 6. A plan for coining the dollars in any town. A simple, easy business with enormous profits. Work it anywhere the whole year 'round. Scarcely any capital.

Section 7. This section tells you how to make a new "relish" and create and established business with it. You should be able to establish an income for life.

Section 8. How to start a "Co-Operative Store." Can be started anywhere with almost no capital at all, and a 15-year old boy can handle it. A high-class idea.

Section 9, Another Mail Order plan. A simple, neat, little proposition that has made money for several people.

Section 10. Tells you how to put up and sell the most novel proprietary article ever suggested. "Sober up" is its name and it fills a long-felt want.

Section 11. Another Local Business, good for a good living anywhere on earth. Neat, profitable. You can start it right up after reading this Section.

Section 12. A high-class proposition, good for splendid profits. You can work it in your own locality, or you can travel.

Section 13. This plan should be good for a substantial, permanent income. You will admit this when you read about it.

Section 14. A neat money-maker anywhere. It is one of those businesses that gives you a standing in the community.

Section 15. A business now in operation in many sections. Plenty of room.

Section 16. Manufacture this staple article yourself and create a business with it according to instructions. Enormous profits and almost no capital required.

Section 17. A little Mail Order Business that pays you about 600 per cent profit on certain articles suggested.

Section 18. A business with which a man with a horse and wagon supported a wife and nine children comfortably.

Section 19. An unique, exclusive and profitable Mail Order plan, now for the first time published.

Section 20. A canvassing scheme that has won out. Canvassing is hard work, but here's an easy way.

Section 21. An unique proposition and a dividend payer. Good anywhere. The whole year 'round. No capital required.

Section 22. When you read this Section and study this plan a bit you will say: "I can make money with this, sure." If this plan were the only one in the book you would be satisfied.

Section 23. Not a "skiddoo" plan. It's about the best thing in the whole book. You should be delighted with it.

Section 24. A "bunch" of business tips by the author. In this Section he gives you a collection of money-making ideas. Material here for several businesses. You should find things in this Section to make you independent.

IN CONCLUSION.

In compilling this work, the author has carefully dissected every plan; he does not believe there is one plan described but that is practical and workable. He does not think there is one plan given but that you can make money with it if you but try.

THE PRICE IS ONE DOLLAR.

Send for it today and start something!

PRIZE WINNING

White Orpingtons

Winners at N. Y. State Fair and Place shows and many other local shows with ribbons if desired. Stock $3. up. Hatching eggs a specialty.

EDWARD SCHILLER,

FERRY VIEW POULTRY FARM,

Pattersonville, N. Y.

Trout's White Wyandottes

Will sell 150 pullets of the Stay White strain, which will be sold on account of over crowded stables, at prices from $1.50 to $3.00. Winners at Boyertown, Pottstown, Reading, Spring City, Phila. and Allentown. They are not first prize winners, but good layers, and are White and must be right, or money will be refunded.

LEWIS B. TROUT,

Boyertown, Pa.

Sec. Boyertown Poultry and Pigeon Assn.

White Wyandottes

Bred from a heavy laying Strain and have a good Show Record. Write for mating list. Baby chicks for sale at 12 cents each, or $10.00 per hundred.

CHARLES F. DUCK,

Middleburg, Pennsylvania.

S. C. BUFF LEGHORN

Eggs from Boston Winners, 1914. First and second Cockerel, first Hen and third Pullet. 1915, first, second, fourth and fifth Cockerel, second and fourth Hen, second Pullet.

MISS A. P. WILCOX,

Mystic, Conn.

White and Dark Cornish

Eggs at $1.50 per 15. Cheaper per 100. Stock consist of the World's leading strains.

C. J. STOUDT,

Emaus, R. F. D. 1. Pa.

S. C Buff Orpingtons

1915 winnings at Middlesex Co. Show, Middletown, Conn.

My Orpingtons, silver trophy for best cock, hen, cockerel and pullet. Best cock'l and two pullets, and best display. Also 4th cock, 3rd and 4th hen, 1st cock'l, 1st and 2nd pullet and 2nd pen. 7 entries, 7 regular ribbons, 3 specials.

1914 PREVIOUS WINNINGS 1914

21 entries with 21 ribbons, 10 firsts, 5 seconds, 4 thirds, 2 fourths at Meridan, Charter Oak Fair, Conn. State Fair and Hartford.

Prices reasonable. Send for mating list.

FRED W. LORENZ,

Meriden, Conn.

English Penciled Runners

Prolific laying, guaranteed white egg strain. Golden Laced Wyandottes that will please you. Stock, eggs and day-olds at reasonable prices.

MRS GEORGE W. CHURCH,

R. 7. Townville. Pa.

S. C. White Leghorns Only

THE WORLDS BEST LAYERS.

Tom Barron strain. Also American breu birds of the highest exhibition and laying quality bred since 1901.

Stock, eggs and chicks at prices that are right. Incubator eggs, 100, $5. 1000, $45. A fine lot of cockerels at $2. to $5. Circular.

CHRISTY FARM,

Box J. Cortland, N. Y.

Tom Barrons Champion Layers

Hatched from the Worlds Best.

S. C. WHITE LEGHORNS.

My egg records are from 200 to 220 eggs in one year. Eggs for hatching $2.00 per 15.

JOHN D. Ball,

Box D. Glenside. Pa.

White Wyandottes

Eggs for hatching from birds that win and lay. Regal strain. My pens contain only my best layers and all my prize winners. Two dollars per setting and satisfaction guaranteed.

L. W. COOK,

Tunnel, New York.

S. C. Black Minorcas

Hatching eggs, $3.00 per fifteen.

G. CLARENCE CARLSON,

Chestnut Hill Black Minorca Yards,

560 Salisbury Street, Worcester, Mass.

Barred Plymouth Rocks

RINGLET STRAIN.

Eggs for hatching from either prize winning stock or utility stock at from $1.00 to $5.00 per 15. Baby chicks from utility stock only at 15 cts apiece. Also few choice breeding Cockerels at $2 and $5 apiece.

RIVERDALE POULTRY FARM,

Morris Moyer, Prop.,

Schuylkill Haven, Pa.

Magenta Poultry Farm Estab'd 1898

Single and Rose Comb

RHODE ISLAND REDS

Eggs by settings or hundreds. Stock that I have sold and chicks hatched from Magenta eggs by my customers and myself. Were winners in the leading shows of sixteen different states in 1913-1914-1915. Madison Sqare and Boston included. I won second prize on S. C. Cockerel at the Garden Feb. 12-18, 1915. Free circular.

F. E. WOODARD,

East Longmeadow, Mass.

Roder's S. C. R. I. Reds

have been winning at all our leading shows for a number of years. Line bred from one of our very best strains.

Eggs, $5.00, $3.00 and $1.50 per 15. Stock for sale at all times. Not a Dub on my yards.

F. S. RODER,

Newmanstown, Pa.

JERSEY GRIT FOR POULTRY

FOUR IN ONE.

Vitalizer, shell maker, tissue builder, health toxine.

Used by over 40,000 Poultry Raisers.

Over One Million Bags sold in 1914.

300 Pounds for One Dollar.

Send for Samples and Analysis.

ARTHUR W. BISHOP, PATERSON, N. J.

CHICKS 400,000 For 1915

from flocks winning at Chicago. Boston and Cleveland. Strains having 256 egg average. White and Brown Leghorns $3 per 25—$5.50 per 50—$10 per 100. Buff Leghorns, Barred, White or Buff Rocks, White Wyandottes, R. I. Reds, Black Minorcas and Anconas, $3.50 per 25—$6.50 per 50—$12 per 100. White and Buff Orpingtons $4.50 per 25—$8 per 50—$15 per 100. Safe arrival and satisfaction guaranteed. Catalogue free. Best Coal Colony Brooder-Stove made $19.00. Get your order in early.

CLEVELAND HATCHERY

918 W. Madison Ave., Cleveland, Ohio

2354 Eggs From 10 Hens

Director Tom Quisenberry did that at the Missouri State Experiment Station.

He don't claim you will do that, but he is at the head of the only exclusive poultry correspondence school in the World and he will teach you the common sense way to big profits.

A FEW HELPS IN MATING YOUR PENS

By H. V. Tormohlen, Portland, Ind.

A well educated young man recently wrote me some of his problems in the poultry business and among other things said:

"Ever since I have been big enough I have raised chickens, like most people raise them, by the luck method. Because of a long illness I will be compelled go into the poultry business on a very small scale, health and capital having been pretty well exhausted. Another thing that bothers me is the breeding up of my flock. Of course I have the Standard of Perfection to find out what to breed too but how am I to get there is the problem. Can you suggest any book that will give me the principals of breeding? The magazines are very silent on that. The poultry course at the Agricultural college is very poor. (A western state.) Their bulletins are rehashed from the back numbers of the journals, It seems to me. But nothing on breeding has come from them."

This criticism, I must admit, was sort of a shock to me, I commenced immediately to go over a score of journals and at the same time to think back over my early experience. I must confess the more I thought back the more vivid the picture of my early longing for an article on how to mate my favorites. I used to think that if I could only get to the yards of one of the leading breeders for a day's study my troubles would be at an end. But with many others like myself at that time, it was an impossibility to go any great distance to visit the yards of breeders and so the problems of proper mating had to be worked out and rules gathered here and there from journals, individuals and studying the winners at the shows.

If the best and most successful breeder of your variety in this country were to take you as a pupil it is doubtful whether he could impart the knowledge sought, even should he exert special pains to do so. Many of the best breeders do not have the gift of speech or ability to express themselves in writing in so techincal a matter as the proper mating of a certain variety. Again the knowledge these breeders have is often obtained after years of study and breeding and it is almost a second nature to them and so deeply a part of them that they cannot express themselves why they would do thus and so and often cannot give any definite rule. To the beginner this is very disappointing. He would like to breed birds in a year or two that would win at the nation's leading shows. What I have said and may, should not discourage him however, for some who go into the poultry business from a standard standpoint are natural born breeders and have success from the start in mating while with others it must be laboriously acquired.

The first thing necessary is a proper attitude of mind in the matter. The policy must be deeply implanted, that if success is not attained this season we will not give up. Many people who go at the poultry business do not know how to properly set a hen or take off a batch of chicks, let alone know how to mate their fowls. Is it any wonder there is a great falling off each year. The mortality in amateur poultry enthusiasts each year is quite as large as with baby chicks.

The young man referred to above has the right start with the Standard of Perfection before him. As far as getting any book that contains the rules of proper mating I do not now recall any such volume. There are scores of different varieties and to reach the top with any one of them requires no end of study and years of experience as a rule. Most men at the top are specialists in their particular variety so it is easy to see why the journals are silent on the breeding question. One or two varieties each issue would require several years to cover the question in any journal. The journals are only too glad to print helpful articles along the lines suggested but the reasons why more of them are not printed are partly enumerated above. Then in a few isolated cases the successful breeders do not care to reveal the rules by which they have reached the top in the art of breding the best for it has taken a life time of

careful study and observation to work them out and they are their bread and butter and they can gain nothing by revealing their method of arriving at conclusions whether a certain bird will mate with a certain other bird properly or not.

Then again the particular strain has much to do with the problem of mating. The old successful breeders have worked with their line for so many years they become thoroughly acquaintel with the quality of certain characteristics as displayed in their particular strain and if changed to another strain of the same variety might have to work out a new set of rules entirely to go by. It is much as if an artist skilled in painting in oil were changed to water color. He would be handicapped and would have to change his rules to a certain extent.

Therefore I place supreme importance in getting a right start in any particular variety in the matter of getting a pair or not over a trio from some reliable

"FIRST PRIZE WYANDOTTE COCK PITTSBURGH PA 1911"
BRED AND EXHIBITED BY.
MAURICE F. DELANO. VINEYARD HAVEN. MASS.
SUCCESSOR TO OWEN FARMS.

breeder already mated to produce results. There is no better way to start than with a single pair. If I were starting over I would spend all the money I intended to spend for a start on two pairs or trios, one mated to produce exhibition males and the other to produce exhibition females. No matter what variety you breed to be the highest class artists in breeding winners you must mate especially for males and you must mate especially for females. This is commony known and accepted with Barred Rocks, Brown Leghorns and some others, but with the solid colored varieies and all it is highly beneficial. Therefore if I, in starting coud get a breeder to promise to send me two pairs properly mated to produce on the one hand exhibition males, and on the other exhibition females, I believe I would have a practical demonstration of this breeders life work more than I could obtain any other way. After one years breeding you could tell whether he did as he agreed or failed. If he succeeded with only one pair in producing the very highest class specimens I would count it a great success. Then you would have this pair to study day in and day out and both birds would be good for a period of three to eight years. With this one or two pairs to fall back on each year and study, by the end of that time you would surely have grasped the fundamentals of properly mating this particular variety and strain.

In buying eggs and using this stock I would rather breed full brothers and sisters together the first year rather than loose the qualities of the strain in breeding in new blood. With brother and sister you eliminate ancestors and the next season will display the weakness of the strain. Then you can buy remotely related blood from the same breeder and outcross again.

The reason the rule is always advocated not to cross different strains is because you do not have perfect birds for the cross. If you had two perfect birds entirely unrelated it would be the proper thing to cross them and you would be sure of results. But alas there is nothing perfect in this world and only a skilled breeder can dip, first here and then there in bringing in new blood and make a success at it. This is not for the amateur to try but he should rather let the founder of the strain do the mixing of his own paint before he sends it out.

Often amateur breeders think they have obtained a good morsel of scandal about a poultry show when they hear a certain big breeder bought a certain bird from a small breeler to put into his flock. They all do this. There is no secret or scandal. The only difference betwen the old veteran breeder and the amateur is in doing it the old breeders know by experience just what he requires in new blood, hence seldom makes a mistake, and in mingling this new blood into his flock, is very careful to mark all offspring and note results carefully before the birds from the cross are finally taken in as part and parcel of the strain. With the amateur he has but a pen or two. He must depend upon the pen in which the new male is to produce his next season's birds. If it was a poor mating it nearly ruins him and he condemns the seller of the new male or female as the case may be while the old breeder is not disturbed by a poor hitch or match as many call it but promptly assigns them to the packer. If a success he makes them a part of his flock. This is the way the standard bred poultry industry is kept going from year to year. The old breeders are careful to inbreed and eliminate ancestors as much as possible and yet they are just as careful to pick up a new bird here and there to try out in furnishing the strain with new blood required to keep up the vigor and stamina.

Single Comb Red breeders eagerly pick up high class sports—the sports are single combs thrown from rose comb pens—from the leading rose comb breeders for it gives them new blood entirely. A single comb bred from a rose comb is as true a breeder of single combs thereafter as the purest single comb. So new blood from the rose comb side of the house is thus obtained. The eastern breeders of all varieties watch carefully the western entrants at

the eastern shows and if they make a winning are quick to offer a trade in stock or eggs, and to inquire what the breeding was. This is done vice versa and so the process goes on each one seeking to reach near perfection in the process of elimination and addition.

This is the time of breeding. To the beginner no better advice can I offer than to confine yourself to very small matings and if you have decided after a careful study of the standard that your birds are not worthy to be the parents of high class stock buy a pair or two properly mated and buy some eggs and note results. This is the best way to steal the other fellows secrets—buy them. His tongue may lie to you or fail to express as he would, but his stock cannot lie to you for it is the medium of interpretation of the breeders art.

Remember that seldom can a mating of first prize males and first prize females in any variety produce the best results. Get this illusion from your head at once. While Rocks are double mated just the same as Barred Rocks. In each case the successful breeder is the one who can shut his eyes to prize winners after the show season is over and mate to produce results regardless of winnings. I might give you my ideas how I would mate many different varieties with which I am familiar more or less but this would require many pages. My chief rule with all varieties is to have the proper under color by all means. Get perfection in under color and it is easy to get perfection in outer color. Type makes the breed. Color and markings the variety. Preserve your color regardless of type and in a few years you can eliminate for type.

TURN ON THE LIGHT

By C. F. Townsend, Weedsport, N. Y.

When the old Roman declared that "vincit omnia veritas"—truth conquers everything—he had no thought of twentieth century poultry keeping.

The "unblushing" falsehoods, the downright swindling, the open and flagrant misuse of the mails by certain alleged "breeders", self styled "pro-fessors" and "system" sharks, have done more to injure the poultry business than anything else.

A beginner reads and believes the outrageous tales which certain publishers are guilty of admitting to their magazines. And, because he is a beginner, he is an "easy mark" for a lot of "so called breeders", who ought to be in prison and some of whom will be, without doubt, in a very short time.

When that "Houdan" rascal left the prisoners' dock, a convicted criminal; when that fragrant "Orpington Shark", with his absurd "sales", his "valuable" hen, his pullet that "laid" 265 eggs in 272 consecutive days, etc., made his "get away", one looked for better times.

But, evidently, there is still work to do. There is always trouble when any of the evil-eyed, shifty, hungry hyenas are seen coming out of their holes, and certain publications are teeming with their unjust claims.

It is strange that any publishers, knowing, as they do, the injury done by men of that sort, will debase themselves by pandering to them.

Let us dub one of these publishers "Mr. Rakeoff" and put him under oath:

"Mr. Rakeoff, you allow a fellow to advertise a "flock average" of nearly 260 eggs per year. Do you believe that any "flock" ever did that?"

"Well-er-I-"

"Answer my question."

"Well, no."

"Very well. Here is a fellow who advertises in your magazine that a '$2 Hen' lays $21.39 in eggs in one year. Now a '$2 hen' lays only common cheap, market eggs. At the high—very high—yearly average of 36c per dozen, three cents each, this '$2' hen, to proluce $21.39, must lay 709 eggs in one year. Do you believe that any hen lays 709 eggs in one year?"

"Well-er-I-"

"Well, no sir, I don't".

"No, neither does the Post Office Department. Another case: Here is a 'system' person, whom you allow to advertise '$1500 profit yearly' with a few hens on a 'pocket handkerchief piece of land'; that

'six persons' can make a good living from six hens; that his immature young pullets are laying nearly thirty eggs monthly—and so on."

"Do you believe any of that?"

"Well-er-I-"

"Answer—quick now!"

"No sir."

"Once more": Do you believe that any self-styled "Pro-fes-sor" can teach poultry keeping by mail, so that a "greenhorn", in a city hall bedroom, can become "competent to handle a great commercial

plant, or be a great lecturer?"

"Well-er-I-"

"Drop that! Answer me."

"No sir."

"Do you believe that any man ever made six hens —count them, please S-I-X hens ever honestly 'produce' over $1200 in one year. Come, now, what?"

"No, I don't."

"You don't. Neither do I. You don't believe. Neither do the Post Office Officials. Neither does the Attorney General of my State—for we have stringent laws against such advertisements. And yet you, because you have an 'itching palm' you take money for such stuff, knowing that in so doing you

are an accessory in helping plunder your own patrons! Have you no sense of shame?"

"Well-er-I-"

"Answer me, I say."

"N-no sir, I'm afraid not."

Admitted. Now in the name of the common sense, if not of common decency; in the interests of honest breeders, and for the welfare of the poultry industry, isn't it time to turn on the light?

Isn't it time that everyone of our honest breeders arises in his wrath and notifies the greedy "Rake-offs" that they must bar out every palpable fraud?

Isn't it time to protect the unwary, instead of helping to fleece and plunder them?

Our blessed Uncle Samuel isn't asleep as they will learn. But won't it be better to put a crimp into this knavery without waiting for the law to act?

Thank God there are some publishers who are not wantons—who cannot be bought. They act like bright lights, shining through what Shakespeare calls the "filthy air". Should not every publication be equally clean?

Don't think there is malice in what I say. Not a bit of it. I have named no names. But let conscience—if they have any—stretch out the guilty, as on a rack. Let them know that a day of reckoning follows fast and follows faster. Speed the time. Help it along.

Turn on the Light!

But some may say: "It is true that certain advertisers may exaggerate, but that is only to attract attention. It does no harm."

No harm?

No harm to make a novice invest in this or that variety of birds under the belief that thereby he can make a good living from half a dozen hens.

No harm to invest in a breed, and expect that a "$2" hen of that variety will lay more than "$20 in eggs in a year", only to find that if she clears $2 she has done wonders?

No harm to look for a "flock average" of 260 eggs yearly, when no "flock" was ever known to reach that number?

No harm to "gold brick" a novice—usually some poor struggling city man—into paying his hard earned money for some "trumpery printed stuff", expecting to learn how to "make" six hens "produce" more than $1200 yearly?

No harm in leading a man to believe that he can read over some printed "lessons" and thus be able to "manage" a great commercial plant?

No harm to "rope a man in that way" when every experienced poultryman knows that poultry keeping cannot be learned by mail any more than could swimming or bicycle riding, without going into the water or striding a wheel.

No harm.

On shadow of the penitentiary!

When a few of these unscrupulous people have "done time", they will know what "harm" means!

THE IDEAL OR THE REAL---WHICH?

By Dr. George Edwards, Laceyville, Pa.

We believe the statement may be made, without fear of contradiction, that absolute perfection does not belong to man in his creations and in inventions. But, if our ideal be as high as it should be, it will reach unto perfection. And this being so, we never attain, practically, what we seek to attain. Because, if this were possible, growth and progress, along every line, would cease. There is such a thing, however, as "going on unto perfection," without attaining it, yet ever reaching out and coming nearer to it.

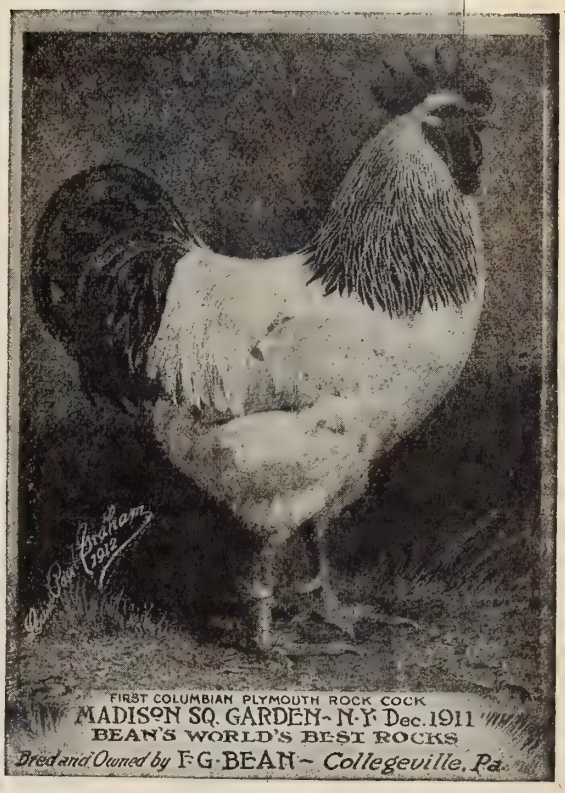
When applied to the perfecting of thoroughbred poultry, how very welcome is such a principle as this. For does not the ambition of the true fancier depend upon observing closely this principle and following it? Else how could we reasonably expect to find in the show room a 95 point specimen of any variety of standard poultry? Defects and blemishes and irregularities will be found in every individual specimen, and, if judged by a perfect standard and an impartial judge, will never reach the

100 mark. Though some specimens are so apparently perfect, that, judged by appearance only, would seem to be faultless. And we suppose that any breeder who has applied all his ingenuity and skill in perfecting, say, for thirty years, his favorite variety, has yet today a sense of failing to reach that state of perfection, because his ideal has become larger and greater, from year to year, in proportion to the increased development in type, color and general excellence of the variety which he seeks to perfect. He has simply endeavored to reach his ideal, which in turn has itself become perfected.

What is real, then, is governed by what is ideal, but the ideal can never represent truthfully what is real. And this observation is of immence importance when applied to certain methods and practices that prevail, or have prevailed, among breeders at large. We refer, unhesitatingly, to the presentation of pictures, as "touched" by artists, in poultry journals, and representing the birds that breeders actually have in their yards, which is gross misrepresentation, if not deliberate lying. But why is it needful to thus misrepresent? Is it, at least, profitable? If I see a gorgeous picture is some poultry journal of just my ideal, fall in love with it, send the owner of that star beauty $10.00 or $20.00 for a setting of eggs, with which this perfect creature is said to have a vital influence, either in laying or fertilizing the eggs, and then reap a small crop of very ordinary youngsters, really true to their mother or daddy, will the affair result in a good business-getter for this breeder in time to come? Seriously, no, never. On the other hand, had the bird been represented just as it was, I could have formed a true idea of its individual quality, and based my action upon this accordingly, with a far better chance of getting just what I was after. At least, I knew exactly the sire, it might be, of my future birds. For I had seen him just as he was, at least in type, if not in color.

We all delight in seeing beautiful pictures. How they do enthuse us. But when we are deceived by those pictures they have lost their beauty, and have become mere delusions. Let breeders consider this matter in a true light, and reform a practice which is now become odious. And let the leading journals of the country stand square and fair for untouched photographs.

Let every picture do the bird and its owner justice, but not to prove a thing of injustice to the buyer. If a bird won't "smile" when it is "took", work with it until it looks its prettiest, and then snap it. When any of us go to do business with the photographer, we do not put on our old, dirty clothes, neither do we put on a dreadful frown. And so with our poultry. Get the best picture you can, only let it be TRUE-TO-LIFE.



In conclusion, not only in the matter of poultry pictures, but in our advertising statements, in our corresponding statements, as well, it will pay great big dividends to be REAL, to state things as they are, and then to "deliver the goods". For in so doing, you will surely gain the reputation of being the IDEAL man or breeder whom many willing, confident buyers are waiting to patronize.

SOME FACTS ABOUT BLUE ANDALUSIANS

By W. T. Naylor, Painesville, Ohio

Blue Andalusian History. Ancient and modern. The Blue Andalusian was first discovered in Andalusia, Spain, by an English fancier named John Taylor. The discovery was made about 1845. How long previous to this date the Andalusian had been in existence is hard to determine. At the time of the discovery by Mr. Taylor the Andalusian was far different from the Andalusian of today. The birds which he brought back to England were of several different sizes and colors and had a tendency to be a game bird. These birds were carefully bred and experimented with by Mr. Taylor until about 1853 when he cast aside the birds of various colors and retained only the blue, black and white specimens. These birds were exhibited the same year in England. This queer breed attracted no little attention at the time and several interested fanciers set themselves to the task of developing this breed, which has been in progress ever since. After several years of experimenting the blacks and whites were discarded and only the blue birds were considered. The Single Comb variety were bred exclusively up until about ten years ago, when the Rose Comb Blues were introduced and in the last few years they have been perfected and a standard has at last been set by which their perfection is to be governed. When Blue Andalusians were introduced into the United States they were readily accepted by fanciers as the true emblematic fowl of our nation. They show the national colors! The red, white and blue

in a way no other bird can compare with them. The Blue Andalusian of today is certainly a great improvement over the early importations and is a model of grace and beauty. On account of their breeding off color occasionally some are mistaken with the idea that they are an inferior breed, but if

"Blue Boy", bred and owned by W. T. Naylor, Painesville, O.

then we can appreciate the rich development and inter-breeding which has raised this breed to such a we stop and look back at the origin of this breed lofty standard that there is bound to be back breeding although this fault is being gradually overcome by careful breeding. Perhaps a description of this breed would not be out of place here. The Blue Andalusian resembles the Minorca in shape, perhaps a trifle small in size, but, is possessed of a more stately carriage. Their comb, face and wattles are a lasterous red, the earlobes are white, medium size, close fitting and very neat in appearance. The plumage, legs and feet are blue. The beautiful tinting from dark blue of the outer lacing, to the light blue of the body lacing, is a feature to be marveled at. They are non-setters and as egg producers they are equaled by few and surpassed by none. They lay a large white colored egg weighing from 2¼ to 2½ ounces. The size and color of their eggs satisfy the most skeptical egg buyers who purchase for table use. Often people misjudge the Andalusian as a table fowl. They think because their plumage and legs are such a rich blue, that their meat is blue in color, but that is not so. Their skin and flesh are clear white and they compare with the Orpington as a table fowl. They develop and mature at an early age and are very hardy. Outside of the difference of comb their is practically no noticeable difference between a rose and single comb hen or pullet. In the male birds a more distinct difference is noticeable. The Rose Combs being shorter in stature and more blocky than the single comb variety.

Panama-Pacific International Egg Laying Contest

Interest in the International Egg Laying Contest, now being conducted by the Department of Live Stock of the Panama-Pacific International Exposition under the supervision of the Poultry Division of the College of Agriculture of the University of California, is wide spread. Such a contest has not been conducted heretofore in this region or under the conditions which here prevail and while some difficulties were experienced in the beginning of this contst owing to the conditions surrounding it, these difficulties have all been overcome and the birds generally are showing increase in production with each passing week.

It is perhaps true that no great exposition has heretofore been inspected by so large a number of pre-exposition visitors and one of the centers of interest on the Exposition grounds, to these thousands of daily visitors is the International Egg Loying Contest.

The Birds.

The birds entered in this contest are housed in a building especially constructed for them and located on the grounds of the Department of Live Stock where it is sheltered from the ocean breezes by the high and wooded hills of the Presidio. Each entry consists of ten pullets between the age of seven and elevn months. These birds are housd in pens having earth floors which are so orranged that it is impossible for skunks or other animals to burrow into them.

The Equipment.

They are in charge of trained experts who devote their entire time to this work. The arrangement of trap nests, roosts, drooping boards, watering tanks, mash feeders and other eqcipment is such as to be of the greatest utility value ond at the same time to serve as object lessons for those who seek information as to the best methods of caring for poultry for best results.

The Feed.

The pullets in this Egg Laying Contest are fed regular rations composed of elements which are not only reasonable in price but which are so compounded as to produce good results in egg production. The scratch feed is made up of the following feeds in the proportions named:

15 lbs. of Wheat, 7½ lbs. of Barley, 7½ lbs. of Cracked Corn.
This is weighed to each pen so that an exact record of the amount of scratch feed consumed is available.

The pullets are also given a dry mash made up of the following ingredients:

5 lbs. Bran, 5 lbs. Shorts, 3 lbs. Meat Scraps, 2 lbs. Soybean Meal, 5 lbs. Ground Barley, ½ lb. Fine Charcoal, 1-10 lb. Salt.

While it is possible to give these hens other good rations, it is not thought possible to give them a ration which will be productive of best results and which will exceed in economic value the one here named. Fresh water, grit and oyster shells are kept before the birds at all times and in addition they are given a daily ration of sprouted oats in such quantities as each pen will consume entirely within thirty minutes.

Following is a list of names, pen numbers and varieties, together with the total egg record for the twenty-three days ending Decembr 15, 1914:

ANNUAL MEET OF S. C. WHITE LEGHORN CLUB.

"The annual meeting of the S. C. White Leghorn Club of Central N. Y. was held at the Sidney Poultry Show, Jan. 27th, 1915. After the regular business was transacted the following officers were elected for the coming year. President, F. H. Pardee, New Berlin, N. Y., Vice Pres., J. H. Kales, Tunnel, N. Y., Sec'y.-Treas., Edwin H. Chase, Edmeston, N. Y., Directors, Wm. H. Stilwell, Hartwick, N. Y., John G. Beswick, Madrid Springs, N. Y., S. K. Willcox, Smyrna, N. Y., J. A. Shineman, Canajoharie, N. Y. The Club will issue a new catalog very soon, which will give a list of members and full information in regard to the Club. Breeders of S. C. White Leghorns will do well to join this Club before the Catalog is issued. A copy of the last catalog will be mailed free on request. Address Edwin H. Chase, Sec'y., R. D. No. 1, Edmeston, N. Y."

EXTRA SPECIAL OFFER

TO

Classified Advertisers

The season is again here when you must decide in what Journal you intend to place your classified advertising in order to secure the best possible results from your investment. We are therefore appealing to you, in behalf of the Poultry Fancier, and submit the following reasons why we believe it will be to your interest to use the Poultry Fancier as an advertising medium through which to dispose of your surplus stock and eggs during this season.

First; the Poultry Fancier meets the approval of every fairminded poultryman, on account of the principles for which it stands.

Second; the Poultry Fancier reaches every section of the United States, Canada and many foreign countries, and its circulation at the present time is increasing by leaps and bounds. Everyone of our subscribers is a live, wide-awake poultryman or poultrywoman, who is interested in the highest welfare of the poultry industry in this country. Without question they will prove a valuable asset by way of increasing your business through orders for either eggs or stock.

Third; the Poultry Fancier is no experiment—it is the poultryman's friend and its aim has always been to aid every man and woman who raises chickens, along every possible, honorable line. In other words, the Poultry Fancier is published in the interests of the rank and file of poultrymen. Again, we own our own equipment and therefore, can give you better value for your money than almost any other poultry journal published in this country.

Now Here Is Our Proposition

A 30 word classified ad, 3 months, right in the heart of the season, for $3.00, the regular price is $5.40; or we will give you a 30 word classified ad, 6 months for $6.00, regular price $9.00; or a 30 word classified ad, 12 months for $11.50, the regular price $18.00. All words in excess of 30, will be charged at the regular rate of 6 cents per word per each insertion on a 3 months ad, or 5 cents per words on each insertion for 6 months or 12 months ad.

Write your name and address plainly and keep us informed from time to time just what results the Fancier is bringing you.

The Uhl Hatchery

Largest in America

We Hatched 450,000 Chicks

During 4½ Months the Past Season.

Many of our customers report winning prizes at shows. We furnish chicks from the finest show and utility stock obtainable. Be sure to get our catalog and prices.

M. Uhl & Co.,

New Washington, Ohio

$7.50 for a Genuine "BUCKEYE"

100% Hatch Incubator

anywhere east of the Rockies and north of Texas. A little higher in the west on account of freight rates. Not a toy nor experiment, but a genuine 60-egg scientific hatcher. Six sizes up to 600 eggs at proportionate prices. The incubator that gives you only 60% to 70% hatches is an egg waster. The "BUCKEYE" gets a chick from every hatchable egg. Nearly half a million in successful operation and sold by 1100 dealers.

40 DAYS TRIAL

Prove It For Yourself

Guaranteed to Hatch Every Hatchable Egg

MAKING MONEY the BUCKEYE WAY

Makes no difference what they TELL you, 70 per cent is NOT a good hatch. You get 100 per cent with the "BUCKEYE" every time, whether you understand chickens or not. Prove this at our risk. Try the "BUCKEYE" 40 days. If you don't get a chick from every hatchable egg, send it back at our expense. We make this unusual guarantee to prove that the "BUCKEYE" is in a class by itself and should not be compared with 70 per cent hatchers.

Free Book: "Making Money the Buckeye Way." Of great value to poultry raisers. Sent free with catalog and name of dealer. Write today.

"DOLLAR HEN"

"One of the Most Practical and Best Books"

John L. Coburn, Secretary of the Agricultural College, of Utah

"Experience is a dear teacher." It is therefore to your interest to profit by the experience of others. Milo M. Hastings, formerly in charge of the poultry investigation of the United States Department of Agrculture, has probably had greater experience and opportunity for observation than any other poultryman in America. He has written the book, "The Dollar Hen," in which his experience and observations are recorded for the benefit of you, who should not pay the price of experience in order to learn the way aroupd the innumberable pitfalls. The maelstrom of misinformation is fatal to the unwary poultry raiser. Why not know, when knowledge is so easy and cheap to acquire? Read what one agricultural college thinks of

"THE DOLLAR HEN"

Agricultural College of Utah,
Logan,, Utah, Feb. 1, 1912.
National Poultry Pub. Co.,
Syracuse, N. Y.,

Gentlemen—Yours of the 27th ult., regarding poultry books at hand. In reply to same, beg to state that we expect to use the book, "The Dollar Hen," in our poultry classes at this institution. In looking same over will say that this book appears to be one of the most practical and best books on the market at this time.

Very respectfully,
(Signed) JOHN L. COBURN,
Secretary.

Until we know from personal experience the vaule of a book, we must judge its worth from what those say who are capable of recognizing the good among so much that is worthless. We cannot ignore such commendation as that contained in the letter above.

For Only $1 you can secure "The Dollar Hen" and one year's subscription to the Poultry Fancier. Either book or magazine is worth more than the price of both. Send your name now.

POULTRY FANCIER

Hanover, Pa.

By CO-OPERATION We

Save money and give our customers the benefit of it.

With ten best breeds on free range, one variety on a farm, and a good caretaker at their head. We are able to offer eggs for 1915 from finest stock at prices that will surprise you. We don't want the whole world, just part of it. White Rocks, Brd. Rocks, Buff Orps., White Orps., Anconas, White and Buff Leghorns, S. C. Reds, Rose Comb White Orps. and White Runner Ducks. Our folder tells how, by economy and co-operation we sell best eggs at lowest prices. And say, don't forget to ask for our Christmas Present—The Poultry Fancier free for one whole year to every customer.

H. L. Goodwin, Farmington, Maine

North Carolina Agricultural Experiment Station---Animal Industry Division

Poultry Experiments and Pathology

Egg Production.

To secure a goodly number of eggs it is necessary to make the proper selection of hens. In breeding one should select for longevity, use late moulters, select early producing pullts, use fall and winter layers, select heavy eaters, select early risers and late retirers, select mature birds.

We blieve it pays to keep pure bred poultry because they are more reliable in breeding, greater egg producers, superior in meat quality,—mixed breeds tend to revert. Pur bred first cost of starting is but little more and it costs no more to keep them. One should secure better results in feeding, better hatching quality, less broodiness, more attractive appearance. Size, shape and color of egg more uniform, can sell eggs and stock for breeding, has greater selling value, can start up-to-date, great pleasure as well as profit.

Laying hens should be kept warm and protected from storms. We recommend the open front house with perfectly tight back, sides and roof so there will be no draught upon the birds. We are preparing some blue prints and instruction sheets for those of our state who desire them. One building will accommodate 12 birds, another a two-unit house with 30 or 15 in each unit; and still another unit house, 200 or 100 in each unit.

To keep the hens happy they should have about a foot of wheat or oat straw in the bottom of the house into which the scratch feed should be thrown. The dropping board should be cleaned at least twice a week and still better once a day. It is necessary to keep the birds free from lice and chiggers. To do this it is necessary to frequently clean and spray the nests and walls, cracks and crevices of the whole building, using a 1 to 5 per cent solution of creolin, kreso, or other good coal tar disinfectant, and pour kerosene on the roosts and dust insect powder among the feathers of the birds stroking the feathers forward so as to get the powder to the skin. Vermin weakn birds, and lay them open to attacks of disease and are indirectly the cause of more loss from death, egg production and flesh than any other one cause.

The birds should not be frightened by strangers and dogs, etc., entering their premises.

The first feed should be given about 7 o'clock in the morning and should be thrown in the straw in the hen house so the hens will be kept busy scratching for an hour or more. This is called scratch feed No. 1.

Dry mash should be kept in slatted hoppers in such a way that they cannot throw it out and this feed should be kept before them at all times.

The second scratch feed should be given about 3 o'clock in the afternoon and should be thrown in the hen house so as to make them work for it. This is called scratch feed No. 2.

Scratch feed No. 1 used in our work at the Station plant at the present time consists of the following:

Wheat, 1 part, Oats, 1 part.

Scratch feed No. 2 consists of the following:

Sifted cracked corn (coarser part), 2 parts, Wheat, 1 part, Oats, 1 part.

The dry mash consists of the following:

Wheat bran, 3 parts, Wheat midlings, 2 parts, Ground oats, 2 parts, Corn meal, 1 part, Cottonseed meal, 1 part, Meat scrap, 1 part. Thorughly mix.

In addition to this, skim milk, clabber or buttermilk should be given. If the birds cannot get green feed they should be given once a day, cabbage, mangles, or any other green feed.

Any questions will be cheerfully answered if you will write the Department in regard to any point not understood.

The Work of the Poultry Science Department.

In the college there is given a complete course in poultry culture. The Department is being equipppd with a students' working laboratory in which to give practical work to the poultry classes in egg candling, grading birds, shaping and scoring, caponizing, dissection and outopsy, judging pure bred birds, preparing insect powder and other practical work.

There is being prepared a poultry appliance demonstration room where the student may study modern appliance and equipment, models of building as well as feed samples, grades of feathers and market prices, egg cases and containers, feeds, feed troughs, water containers, brooders, incubators, shipping, exhibition and fattening crates, trap nests, and many other things.

An incubator cellar is provided with incubators from 60-egg capacity to the mammouth, with egg storage cabinet and a grain sprouting equipment.

In the station work there is work started in combined plant and laboratory. Colony house and yard system contains pure bred birds of different kinds. This problem will be to breed them to standard. They will be used

Edited by W. C. Denny. Illustrations by Shilling and Sewell. The greatest book ever written on Plymouth Rocks. A book compiled by America's most noted breeders, dealing with all the Rock varieties. You can't successfully breed Plymouth Rocks without this great book. PRICE, $1.00 Postpaid.
POULTRY FANCIER, HANOVER, PA.

to introduce new blood into the flocks of the state by offering eggs and birds in season at reasonable prices. They will be used in class work. Practical nutrition experiments will be begun at two of the substations beginning April 1, 1915. The building of a greater egg laying strain using S. C. White Leghorns and scientific selection and matings along the lines of Mendel's law is in progress. The building up of a greater broiler type by using S. C. Rhode Island Reds along similar lines.

A further study as to the cause of chick mortality and the investigation of contagious diseases are among the problems.

The U. S. Government Whitewash.

Many people argue against the use of lime about poultry because often the air slacked lime thrown around contains some not yet slacked which burn the feet of the birds if they step on it. Then lime is rather irritating to the skin of the feet and legs of the birds and in pure bred birds where it is the desire to keep the plumage nice, it rubs off on their plumage wherever they get against it.

The Government whitewash has been used by us satisfactorily both on the outside and inside of the building and on the fences. It does not readily rub off and is durable and gives a thrifty and cleanly appearance to the premises. It must be properly mixed and applied to get satisfactory results. The following is the formula:

Take half a bushel of unslacked lime; slack it with boiling water, cover during the process to keep in steam, strain the liquid through a fine sieve or strainer and add to it a peck of salt previously dissolved in warm water, three pounds of rice boiled to a thin paste and stirred in while hot, half a pound of Spanish whiting and 1 ib. of clean glue, previously dissolved by soaking in cold water and then hang over a slow fire in a small pot hung in a larger one filled with water. Add five gallons of hot water to the mixture, stir well, and let stand for a few days covered from dirt. It should be applied hot, for which pupose it can be kept in a kettle or portable furnace. Add two parts of carbolic acid as a disinfectant.

Finishing Experiments.

Old birds or broilers should be finished (fattened) before sending them to market. The better the grade the higher price they bring. In this extra feeding one gains from two standpoints; first, an increase in weight which will compensate for feed and labor; and, second, a better price. Birds should be confined in coops so as to prevent exercise and given all the feed they will clean at each meal. The kind of feed depends on whether they are adult birds or broilers. They should be fed two to three weeks.

A practical nutrition feeding experiment is planned by this department during January.

A summary of the results will be published in the monthly circular and the details of the experiment will form material for a special bulletin.

Notes.

This monthly circular will appear, from the Laboratory of Poultry Investigations and Pathology, every thirty days. It will be sent to newspapers of the entire state ten days before mailing to balance of mailing list to give the papers a chance to make such clippings as they may choose before it appears elsewhere.

If you want this circular sent to you regularly please drop a card to Dr. B. F. Kaupp, Poultry Investigator and Pathologist, Experiment Station, West Raleigh, N. C., and your name will be placed on the list. It will be sent hereafter only to those papers who request it.

Secretary J. T. Bland, of the North Carolina branch of the American Poultry Association is active in making an effort to swell the already large list of members of this Association. If you are interested in poultry you cannot afford to miss the privileges of this Association. If you are not a member write him today.

B. F. Kaupp,
Poultry Investigations and Pathology.

STRAWBERRIES.

For the Home Garden.

There are thousands of town, suburban and country homes around which there is splendid garden space going to waste. The pleasure of having fresh, delicious strawberries for the plucking is worth several times the attention and garden space they require and the home market will pay well for any surplus.

The W. F. Allen Co., Salisbury, Md., with 30 years experience behind them, and accustomed to a large business with big growers, has recently discovered the splendid opportunity in supplying this home garden trade.

Thousands of copies of the Book of Berries (revised now for 1915) have been distributed. Thousands of people, with gardens of various sizes, in all parts of North America, have found the growing, planting and marketing instructions of this book invaluable. With Allen's true-to-name plants guaranteed, they have succeeded both in supplying the home the most delicious of berries and often supplying the home market at a profit of several hundreds of dollars per acre.

You ought to have this Book of Berries. It's more than a catalogue. With its fine illustrations—many in natural colors—its 44 pages of description, history of varieties, discussion of soils, planting, care, market needs, etc., it just gives you a natural longing for strawberries. It also treats of Allen's other small fruits—guaranteed true-to-name raspberries, blackberries, currants, etc.—in the same way. Very interesting.

The book is free. Get it—and you'll surely get the berry "fever".

Will Pay Reliable Man or Woman $12.50

to distribute 100 FREE pkgs. Perfumed Borax Soap Powder among friends. No money required

WARD COMPANY, 224 Institute Pl., CHICAGO

POULTRYMEN! **Plant Your Extra Space to Strawberries**

They pay much better than poultry and you can deliver the berries as you deliver your poultry products. There is an ever increasing demand for the very best strawberries, and high prices are easily obtained. One man made

$200 from One-Fifth Acre—and did it in spare time, too. But for certain profits you must set out plants that are hardy, prolific and bear fruit *true-to-name*. They should reflect years of study and selection, in large luscious fruit and vigorous foliage. Such are Allen's plants. Small spaces planted to them will yield profits that will suprise you—greater by far than poultry profits. Solicit your present customers and you will see what a ready market there is for good berries. Allen's plants are the result of 30 years' scientific culture. They comprise all the early and late strains of standard worth-while varieties of small fruits for every climate and soil requirement. We devote over 200 acres to the culture of small fruit plants and thus can guarantee you *prompt shipment of fresh stock* in *any quantity*.

Buy Allen's True-to-Name Plants

and you are better assured of large crops of big, delicious strawberries—that bring top-notch prices. All of our plants are carefully selected and packed *fresh* for shipment, and *guaranteed true-to-name*. They are fully described in Allen's 1915 Book of Berries, which should be in the hands of every poultryman who would take advantage of a market that fairly calls him to big extra profits. This book lists Allen's *True-to-Name* Strawberries, Blackberries, Raspberries, etc. It is well illustrated and gives the latest and most successful cultural methods. It's free. Write *today* for *1915 Berry Book*.

Canton, Ohio, Poultry Association

Written By James T. Huston.

The Canton, Ohio Poultry Association Company, Inc. 3rd annual exhibition at Canton, Ohio, week of Dec. 28-to Jan. 2nd, 1915.

Perhaps few Associations in the Country, can boast of a more efficient organization than the one in question, and fewer still are able to put on a better poultry exhibit.

It may be that it is from the fact that this Poultry Show is fortunate in that it has back of it, men who are not only fanciers, but men who exercise the same good sound business principles, which have made success for them in their every day walk in life, whatever the reasons, the facts are uppermost that for the past three years Canton has staged an exhibit, which has done much towards the upbuilding of the fancy poultry interests in the State of Ohio.

We some times lose sight of the fact, that it is not always the largest Cities that put on the largest and best shows, and while Canton, Ohio is no small "Burg" at the same time in population she is not the largest City in Ohio, but we doubt whether another City in that State can boast of a beter show than that held on the above date in this beautiful and thrifty City.

With men such as Mr. H. V. Pay as Pres. backed with just the right men in the right places as the balance of her officers, we readily see why Canton is so successful.

In looking over the classes, we are surprised at not only the numbers, but the quality of the exhibits, etc. Barred Rocks with over one hundred single birds and twenty-seven pens, gives you an idea of the competition in this class alone. Orpingtons and Reds with classes almost as large. We believe the awards will interest the readers of this Journal so are giving them in full.

Awards as follows:

BARRED PLYMOUTH ROCKS—COCKS
Chas. Reed, 1; Fred Anthony & Son, 5; J. H. Seeton, 2, 3, 4.

BARRED PLYMOUTH ROCKS—HENS
Chas. Reed, 4; Fred Anthony, 2; C. E. Wilhelm, 5; J. H. Seeton, 1; E. S. Grable, 3.

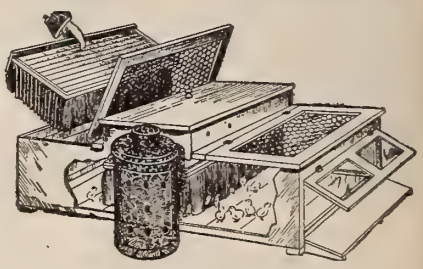
Here is the

Chick Saver



The "BUCKEYE"

KANT KROWD KLOSE KONTACT

Brooders and Hovers

Most wonderful artificial mother ever invented. Over-crowding, over-heating and suffocation absolutely impossible.

The only hot water brooders and portable hovers that have been approved by the National Board of Insurance Underwriters.

You can raise chicks in zero weather with the "BUCKEYE" Kant Krowd, Klose Kontact Brooder. Every chick kept warm and cozy without crowding.

Save the 40% That Usually Die

Get full profit from your incubator by raising every chick! Steady, uniform heat with perfect ventilation. No foul odors. Klose Kontact for every chick—Nature's way. The "BUCKEYE" Kant Krowd Klose Kontact pays for itself in a short while by the chicks it saves from death.

You have only to see these brooders in order to realize their wonderful possibilities.

Write for our catalog of "BUCKEYE" Incubators and Brooders, also name of nearest dealer. Do this today.

S. C. BUFF MINORCAS.

The New Creation, The Buff Minorcas Are the Very Latest in the Poultry Line.

By Marble Bonoit, Montello, Mass.

There seems to be such a continued boom and some little prejudice in favor of certain breeds and variety, that it is but proper for the subject to be treated and discused by me.

In the S. C. Buff Minorcas we see all that is good. Let us fortify ourselves with facts, absolute truths, that we may by test or arguments prove conclusively, that the Buff Minorca lays as many eggs as their sisters, Black and Whites, and as large ones. Their is no variety as down right profitable to keep and very few as beautiful to look at. They are identically the same size, shape and characteristics as the Blacks and Whites. In color, they are the same as all other buff varieties, which is a most beautiful Golden Buff. The color of the skin is a pinkish white, the eyes a dark hazel and legs a pinkish white. They are breeding true to color and it is doubtful if ever a new variety has been offered to the public that is as perfect in this respect.

They are the finest table fowl. Have no dark pin feathers, or white feathers to soil and are simply in a class by themselves. Their eggs are larger than many other breeds of fowls. Eight eggs of Buff Minorcas weighs as much as the average dozen bringing from 5 to 10 cents per dozen, more on the big markets than others.

They are hardy and mature early and are positive winter layers.

The Buff Minorca weight is as follows: cocks 8 pounds, hen 6½, cockerel 6½ and pullet 5½ pounds.

One of its merits is early maturing, both as a market fowl or layers. If properly reared the pullets will lay at 5½ months. At eight weeks you have the choicest broilers. They have the advantage of other Minorcas in this respect that the chicks feather out very early, same as the Leghorns.

I believe they are worthy of the attention of our best breeders and I am glad to have this opportunity of describing them to the readers of this journal for they are popular, not only for their beauty, but for their utility qualities as well.

NORTH PENN POULTRY ASSOCIATION AWARDS.

Barred Plymouth Rocks—Harry Barnes, 2, 4, 5 hen, 1 ckl., 3, 4 pul., 1, 3, 4, 5 pullet bred males, 2, 4 cockerel bred females.

THE LIBERTY BELL BIRD CLUB

By Lida May Briggs, The Farm Journal, Philadelphia

"THE BIRD OR THE CAT?" has become a scratching subject which is making the feathers fly in many a heretofore peaceful neighborhood. Bird lovers who have attempted to establish sanctuaries for their feathered friends have been compelled to revise their visiting lists according to where her Royal Highness, Tabbykins, holds sway.

The bird man who has found to his sorrow that any bird and cat combination means cat-astrophe, even while he is taking the mangled body of the little feathered tenant, that he has worked for months to attract, from the clutches of the innocent-looking, fluffy, four-footed murderer, will be assailed by the cat-owner, who indignantly declares that while other low-bred creatures may catch birds, she knows her own blue-blooded darling Fluffykins is too well bred and too well fed to do such a deed!

Naturalists statistically rank the felis domesticus as third in the bird destroying agents, holding every roaming cat responsible for the lives of at least fifty birds a year. A game warden who reports 200 quail killed by a mother cat in less than a year on the game preserve, advocates the wholesale extermination of cats under the supervision of a game warden.

The value of the cat to catch mice or rats is dusputed by a bird enthusiast, who maintains that this Nero of the animal world will hush forever the joyous song of any little feathered chorister, simply for his own amusement when not in need of food. When he dines he goes after a cold bird in preference to any other delicacy and will catch mice or rats only as a last resort to keep from starving.

The most serious arraignment against both the domestic and stray cat is made by the Boards of Health, who have found these animals to be carriers of scarlet fever, diphtheria and other diseases most fatal to their human associates.

A successful business man says that if a cat kills a little chicken in the yard of the average farmer, the cat is made away with. If the four-footed hunter comes home with a quail, he is petted; yet the quail is of greater economic value to the farmer than is either the cat or the chicken. He thinks, for humane reasons, the wild or stray cat left on abandoned farms should be put out of the way.

A cat-a-comb, where feline prowlers may be laid permanently to rest, is considered a necessary adjunct to every bird sanctuary by a bird conservationist, who has tried, without success, various methods to prevent cats from killing helpless song and insectivorous birds so valuable to man. Another long sufferer from cat depredations considers a near-by deeper bath, in which to immerse and leave the savage depredators, is the only way in which a bird bath may be maintained.

Some friends of the birds think to license the cat and hold the owner responsible for his pet's destructiveness will solve not only the vexing cat, but also the kitten question. They conclude that if a person pays for a license he will not be so apt to desert his cat, leaving it dependent upon hunting for a living.

Optimists who still believe that cat nature may be educated or restrained, suggest that bells and bright ribbon be placed on Pussy so that a warning will precede her fatal spring. Others advocate that the poles or trees on which bird-houses are placed should be sheather in tin or wrapped in barb wire to prevent the cat from climbing up and destroying the half-grown nestlings before they can fly to safety. A thorny rose-bush is advised by another humane person; but the ever-present cynic thinks it much better to plant the cat at the roots of the rose-bush where he is sure in time to evolve into harmless fertilizer.

If you will help save the birds from all their enemies, sign the the following pledge and send it in to The Farm Journal, Philadelphia, when the badge-button of the bird-saving Club will be sent you without cost:

"I desire to become a member of The Liberty Bell Bird Club of The Farm Journal, and I promise to study and protect all song and insectivorous birds and do what I can for the Club."

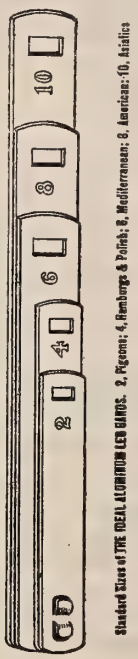
SOMETHING NEW FOR POULTRY RAISERS TO SAVE TIME IS AN AUTOMATIC

Poultry roost with flexable running board, the invention of H. Chauncey Hart of Unionville, Conn., the frame is of steel which makes it sanitary, the running board is of canvas 24 in wide running over pulleys at each end of the frame a chain is attached to the rolls at each end and by turning the crank of machine in 10 seconds the board can be cleaned, the canvas belt or running board is water proof and all droppings are removed without delay. Mr. Hart is taking out patents in the U. S. and foreign countrys and hopes to have on exhibition at the New York Poultry show one of his full sized machines. In the March issue of the Poultry Fancier this machine will be shown up, although the Machine is a steel frame it will not be so high in price but what all poultry raisers can afford to use them. Mr. Hart is one of Conn. great inventors and has taken out over one hundred patents, as he is in the poultry business he concluded that too much time was spent in cleaning of the drop board. It will no doubt save thousands of dollars to poultry raisers. He expects to employ agents in every state, and may sell out state rights, to good reliable parties. For further information address H. Chauncey Hart, Unionville, Conn., U. S. A.

LEG BANDS



IDEAL.

This band has a double clinch, making it more secure than the single clinch style. In fact, when properly put on it is sure to stay there until purposely removed.

Ideal bands are made in 5 different sizes as per accompanying illustration, and numbered with raised numbers. State size of bands wanted with order.

DIRECTIONS.

First raise clinchers to a point, than form band over the finger, in as true a circle as possible and after band is applied to the fowl's leg, fasten by pressing clinchers down firmly as shown in cut.

Prices Prepaid.

Numbered to order, 12c per doz., 65c per 100.

More About Lice in the Dead of Winter

By H. V. Tormohlen, Portland, Ind.

Since the article in last months issue I have received dozens of letters asking more about my way of keeping my fowls free of lice. I will quote one letter as a sample.

Sommersville, Tenn., Jan. 14th, 1915.

Mr. H. V. Tormohlen, Portland, Ind.

Dear Sir:—I read your article on lice in the dead of winter and was much interested. My hens were not laying as they should. Examined them and found they were infested with lice. I wish to try your remedy. Please tell me where I can secure "Avernarius Carbolineum". I have been a breeder of fowls for 35 years and more and never thought of looking for lice in the dead of winter but I found them as you described in your article.

Yours truly, John Wetzler.

I never suspected that there were so many interested in my articles until I commenced to get letters about this one by the dozen inclosing stamps and asking for more information until the answering of them is threatening to require another typist.

For the further information of interested readers may say that these are not my remedies. Blue ointment can be obtained from any druggist and he can tell you what some people use it for if you do not already know. Buy in ¼ pound lots. Cheaper this way. Some have asked if it did not kill the fowls. Had read about it killing them. Blue ointment is a mercury preparation. Poisonous of course if eaten. I have used it on hundreds of fowls and never lost a one because I used a quantity size of pea rubbed in the base of th feathers well about one inch below the vent Then rub little around above the vent if you like. I do this. If it is not rubbed around well fowls may comb some of it out and it might poison them this way. Nothing is fool proof however and if this is not used with sense it might not work as stated. I never recommend anything until I have tried it out for several seasons. Purdue University of our state recommends this same treatment. Used two or three times a year it is sure to keep fowls free of lice. I can go over 100 fowls in about as fast a time as I can pick them up and let them down again and then your troubles with lice are over for six months.

I have seen Avenarius Carbolineum advertised in a number of poultry publications and was sure an ad was now running in this journal but guess I am mistaken. I assure the reader I am in no way interested in this company but for my own future protection I am going to advise them to advertise in the publications in which I give them free advertising. This can be obtained of the Manufacturer, The Carbolineum Wood Preserving Co., Milwaukee, Wis. I get it by parcel post in gallon lots. A gallon will last a long while with the average poutryman. It is painted on the roosts hot and one appication will last three years so reliable fellow poultrymen who have tested it have told me. I apply it once a year on a warm spring day and then forget there ever was such a thing as a mite. I have gone so far as to offer fellow poultrymen who have been skeptical about it a dollar for every mite they find in my houses where it has been painted on the roosts. After three days after the blue ointment has been usd on the fowl for the body lice the same offer would be just as good and safe from being taken. It beats fussing with powder and you are sure the nits hatching in a week or two will not live and need another application as they would if powder had been used for there is enough of the blue ointment on the small particles to kill thousands of lice for months to come although in two or three days you cannot detect any greasy appearance about the feathers.

Proper Care of Poultry, One of the Great Essentials to Success on Either a Large or Small Basis---Some Pertinent Facts Worth Careful Attention by All Poultry Breeders

By Dr. John H. McKee

All poultry raisers seem to be trying all the time to advance the quality of poultry which is one of the best things to do, for the poultry of this country is one of the greatest industries in the U. S. for the amount invested. Thousands of dollars worth of Poultry are raised on what would be lost around the home and back-yard. If this is so, which it is, why not put a little time and extra trouble to the study of poultry and make it pay an extra sum? Have you ever realized that $100 invested in a good quality of hens would net you more clear cash in one year than $100 invested in a horse or cow? This being true, why not be as careful about the health of your poultry as you are about the health of your cattle and horses? If we have a valuable horse or cow get sick, we at once call a veterinary surgeon. If disease breaks out in your flock of poultry, why not look after their needs and treat them. It would be money saved that has already been earned. When we have a flock of fine hens or turkeys—that is money already made—why not try to keep it? So many people entertain such peculiar ideas regarding the treatment of poultry and the care of their diseases that it seems more than passing strange to me. Now, you take any fowl and they are subject to diseases the same as man and all other kinds of animals. We have stomachs, so has the fowl, and both are subject to stomach trouble. We have lungs, as has the fowl, both are subject to lung diseases. We have kidneys, so has the fowl, we have all the organs that go to make up life, so has the fowl and all are subject to disases. Now all these diseases have a cause in man and the same is so with the fowl. We are learning more and more every day, the causes of disease in both man and animal, but it seems that little is being done toward tracing out the diseases of fowls and preparing a treatment for them. It is enormous, the loss of money in the U. S. each year, because of the negligence of either the people or the veterinary profssion, in not looking into this more carefully than is being done. As I said in the first part of this article, we are all striving to raise the quality, why not strive to preserve the health which is one of the main things to do. The health of our domestic fowls are in more danger of being attacked with disease than ourselves or our other domesticated animals f-r this reason, our horses, cattle and other animals do not eat the same diet as do our fowls. Fowls will, if they get a chance, eat any and all kinds of decayed flesh, bugs or decayed matter of any kind, almost all of which contains more or less Bacteria, and matter that is hard for the system to throw off. Now, it looks plain to me that this is endangering the health of fowls more so than it would the animals that eat pure clean, wholesome food. I have always found that a preventative is much better than a curative. For this reason, it looks wiser to try to prevent disease than to cure it. That brings about the old saying, that an ounce of preventative is better than a pound of cure. Now it seems to me that a good resolution for 1915 would be to look more carefully after the health of poultry than we have ever done before. Let our motto be, "Boost the health as well as the breed", and see in one year if our results are not far greater than in previous years. I have found out by experience that healthy hens lay healthy eggs, healthy eggs hatch healthy chicks, and healthy chicks make money and that is what it takes to put us through society. Now you will see my ad in another page. Its my business to look out for the health and treatment of diseases of poultry for I have been making it a study. You will hear from me in each issue of this most worthy journal if they will allow me the space.

EXTRAORDINARY IMPROVEMENTS IN INCUBATOR DESIGN.

Poultry raisers everywhere are realizing more than ever the advantages of the small-unit system of incubators, and the distinct increase in hatching percentages from all-automatic incubators. Along these lines, the well-known manufacturer of incubator supplies, H. M. Sheer, of Quincy, Illinois, comes brilliantly to the front. So great has been his success with the "Sheer" Automatic Fixtures, which operate with wonderful scientific nicety and accuracy, that he has put on the market for 1915 complete ready-built Sheer incubators, equipped entirely with his own fixtures.

The result has already surpassed his expectations. His "Peerless-60" of 60-egg capacity, the first all-automatic, all-metal incubator of this size ever made, is a little marvel for hatching results. Small as it is, it is fully equipped with the world-famed Sheer Automatic Fixtures. The cost and time required in its operation are almost negligible. Sheer is also producing a 200-egg, equipped with his Sheer automatic fixtures. Another sensation is his Multidek, a new 1,000-egg machine. This is really a small-unit machine, because it is constructed in tiers, up and down, instead of lengthwise, each tier being a complete 200-egg all-automatic machine. For convenience in height, any number of tiers from 1 to 5 can be used, one above the other, each operating simultaneously with the rest, and all operating as one machine, with less trouble to operate the five tiers than with one big 1,000-egg unit. It saves 6 times the ordinary floor space of the big units, and operates at less expense. It solves the problems of the big poultry raiser. We advise every one to send for full particulars about these noteworthy improvements, addressing H. M. Sheer Co., Quincy, Illinois.

CENTRAL PENNA. POULTRY ASSO. DIRECTORS HOLD ENTUSIACTIC MEETING.

The Board of Directors of the Central Penna. Poultry Asso. of Harrisburg, Penna. held a meeting Feb. 4, 1915, and voted to put forth every effort to make their show for the season to be held Dec. 7, 8, 9, 10, 11, 1915, one of the largest and best in the East. Although somewhat early in the season committees were appointed and instructed to get busy and cover every phrase of the work to produce a "bang up" Quality Show.

Exhibitors should bear this in mind and breed in order to have their birds in condition for this show as the honor, and cash premiums that will be offered will be worth while winning.

Specialty Clubs wishing a show that will give them some inducements worth considering should communicate with,

G. E. Brown,
Camp Hill, Penna.

Brooder 21c

For 21c, exclusive of lamp, build the best brooder on earth, easiest to operate, needs least care, raises strongest chicks, built in 2 hours with saw and hammer. Plans 25c.

CONDEMNS RAW GRAINS AS CHICK FOOD

Experiments Prove That a Partially Predigested Food Will Avoid Feeding Troubles and Save Chick Lives.

Proper feeding is the greatest factor in raising baby chicks. Fully two-thirds of the chicks which now die could be saved if greater feeding care were observed. The losses should not exceed more than four or five in a hundred. Such success is attained only by feeding a partially predigested food, not the finely cracked raw grain usually sold as baby chick food.

These are the conclusions reached as the result of rather extensive investigation by the Pratt Food Company's Experiment Station. That losses frequently run as high as 50 in a hundred seems rather staggering, but it is hardly open to dispute. That they can nearly all be prevented by proper feeding is the hopeful note that the message brings at the beginning of a new hatching season.

The data were compiled from reports received from a large number of poultrymen, some of whom hatch baby chicks by the tens of thousands; others just a brood or two. The unlooked for thing is that the losses run about the same in both classes, although one would rather expect the smaller yard to make the better showing owing to the fact that it would ordinarily receive closer personal attention. This being true, the importance of correct feeding in raising baby chicks becomes conclusively proved. The statement is also made that proper feeding gives the chick with only moderate vitality when hatched a chance to grow and become a satisfactory money earner. Raw grains, which finely cracked are the usual chick food, the Station finds to be one of the comomn causes of feeding troubles.

This investigation agrees with the conclusion reached a few years ago when feeding experiments with a partly predigested ration were begun at that Station.

Any objection that might be offered to a heat treated food as "unnatural" is quickly disposed of when it is explained that such foods come nearer from a physical standpoint to the natural food that a hen would supply than do the cracked raw grains formerly used.

Not only here but on many other poultry farms, this method of feeding partially predigested foods was given a thorough test and thousands of letters commending the food have been received. The reports showed in many instances that every chick was raised, while in none did the losses run over five in one hundred. The average was less than three.

So great has been the success of this partially predigested "baby food for baby chicks" that the Poultry Experts of the Experiment Station now supervise the operation of Pratts Baby Chick Food at the laboratory of the Pratt Food Co. of Philadelphia.

Regarding the cost of this food (which by the way is a complete food for the first three weeks, nothing else being given except grit and a little scratch food to induce exercise), the Station says that it is not expensive, averaging less than one cent per chick for three weeks. When one considers the great saving in chick life, it is apparent that Pratts Baby Chick Food not only pays for itself but splendid interest besides.

Persons wanting to know more about this ration should write the Pratt Food Co. of Philadelphia for their new baby chick and poultry books, which give many additional facts about it and about the successful feeding and raising of poultry.

EGGS 12c A DOZEN
BY THE NEW DISCOVERY,
"OCULUM"

Let us send you our $100.00 FREE offer and tell you HOW to raise most of your chickens by the CELEBRATED "OCULUM" METHOD".

Western P. Journal, Cedar Rapids, Ia., says: "OCULUM" is "MAKING GOOD" wherever tried".

D. B. McNeill, Cunningham, W. Va., says: "I was getting 20 eggs a day when I commenced the 'OCULUM METHOD' 3 weeks ago. Today I got 300".

G. E. Worthington, Lake Park, Ga., says: "By the 'OCULUM METHOD', I have, out of 1000 hatched, over 975 six weeks old and they average over a pound".

Roup, Cholera and W. Diarrhoea Permanently Cured.

Money back, if "OCULUM" fails,. If your dealer hasn't "OCULUM", write us. 50c and $1 the bottle, postpaid. Booklet free.

TO INCREASE HATCHING PERCENTAGE.

There is no question that guesswork in artificial incubation has been responsible for much of the loss in hatching results. Whatever will bring about the greatest uniformity and accuracy in the process of incubation helps to solve one of the greatest problems of the poultry raiser. For this reason the all-automatic incubator is the only machine worth while, for in addition to its wonderfully accurate control of every phase of incubation, it keeps the cost of operation down to a minimum. We call the attention of every poultry raiser, and every one who is thinking of starting up in the business, to the important announcement of H. H. Sheer, recognized as one of the foremost incubator authorities, and whose incubator supply factory is reputed to be the largest in existence. Mr. Sheer has had an experience of over a quarter of a century in the designing and building of incubators. Hitherto he has confined his business to the making of incubator supplies and his widely famed automatic fixtures and "knock-down" incubators. He has ushered in 1915, however, with a new policy, the manufacture of ready-built incubators, built along "Sheer" lines, and equipped throughout with these same Sheer fixtures.

At the same time he has produced a distinct improvement in a big 1000-egg machine, built in tiers, low enough for easy handling, and high enough to save six times the ordinary floor space for machines of equal capacity. An added advantage is that each tier is practically in itself a complete automatic incubator, yet all tiers operate in perfect unison. His new 60-egg, all-metal machine, the Peerless-60, and his new 200-egg machine, have already had a tremendous success.

We advise all to write for Sheer's complete 1915 information about these new machines, sending name and address to H. M. Sheer Co., Quincy, Illinois, mentioning this periodical.

Pratts POULTRY REGULATOR

Before you set a hen this spring or start your incubator, give the breeding stock Pratts Poultry Regulator and thus make sure of fertile eggs and a hatch of able-to-live chicks. Pratts Poultry Regulator has been the standby of successful poultrymen in increasing numbers for nearly half a century. Make it yours, as they have done, for growing and grown stock, the year round.

No matter what breed you raise—the better the birds the more Pratts Poultry Regulator will do for them. Sold under our money-back guaranty that it will help your hens and satisfy you. Go to one of our 40,000 Pratt dealers or write us.

IT MAKES POULTRY PAY. IT KEEPS THEM WELL.

Fawn & White Indian Runner Ducks

By Geo. F. Williamson, Flanders, N. J.

Some five or six years ago I became very much interested in Indian Runner ducks and I made up my mind to purchase a trio of good stock and give them a good thorough try out and see if they were the money makers some breeders claimed them to be, and to put it mildly, will say that they have come up to my expectations in every respect.

I wrote several breeders of note for prices on stock and to my surprise I found that they had sold all the stock they could spare. They said the demand was far greater than the supply and this made me all the more determined to have a trio and at last I succeeded in purchasing a trio from a breeder in a neighboring state. From the start the Fawn and White runners were my favorites and always have been.

I had good success with my trio from the start. The first season I sold enough eggs for hatching to pay for my trio and also raised a large number of ducks for my own use. Every year since, we have raised a large number and expect to do so for years to come for the Fawn and White runner is becoming more popular every day and is bound to be more popular as the years go by, simply because they have merit.

Three breeds or varieties of runners are being bred now. They are the American standard Fawn and White, English Penciled and pure white. We have both the Fawn and White and Penciled and from practical experience will say that we prefer the Fawn and White.

Some strains of Fawn and White runners will lay a tinted egg, so also will some strains of penciled runners lay a tinted egg.

Some breeders of the penciled runners will give you the impression that the penciled ducks will lay nothing but pure white eggs. The strain of penciled ducks that we had laid nothing but tinted eggs. I fully believe that there are as many, if not more strains of Fawn and White Runners, that will lay white eggs than penciled ducks. Our Fawn and White runners lay a pure white egg and have been bred for years to do so. Last year we did not get a single tinted egg from our entire flock.

For a bird of beauty I think the Fawn and White runner cannot be beaten. As an exhibition bird, for the fancier, they are a study of beautiful shades and graceful carriage. At all of the Poultry shows where I have exhibited everybody remarks, when they see a Fawn and White runner, "what a beautiful bird", or words to that effect. I meet a great many people who are under the impression that runners cannot be raised successful in confinement and without running water. I have raised runners in large numbers without any water except water to drink and never let the duckling have water to swim in until they were fully feathered out. One year for a test I raised on a lot about 35 by 50 yards 212 runners to maturity, many of which were prize winners at the winter shows.

Indian Runner eggs as a rule are very fertile and hatch extra well. The ducklings are very hardy and vigorous and will mature when they are eight to ten weeks old and begin to lay when they are five to six months old. They are very friendly when they are young and our great trouble is to keep from feeding them too much. Over-feeding is worse than not feeding enough. I will give my system of feeding and rearing which I think will benefit the readers of this article.

We set from eleven to thirteen eggs under a common hen depending upon the size of the hen and the condition of the weather.

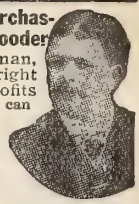
After the hen has been sitting about three weeks sprinkle the eggs well with luke warm water of 103 degress and then sprinkle them daily until they hatch, which will be on the 26 to 28 day from the time they are placed under the hen.

Do not feed them until they are 36 to 48 hours old for nature has provided for them during that period. Their first feed should consist of stale bread moistened with sweet milk and squeezed as dry as possible with the hand. Sprinkle a little sharp sand on the bread for grit. Feed this five times daily until they are ten days old and then change to mash and feed this five times daily until they are six weeks old, then reduce to three times daily. Great care should be exercised in changing from bread to mash and it should be done gradually or you will make the ducklings sick. The mash that I have had great success with has the following make up. Four measures of wheat bran, two of corn meal, one of wheat middlings or low grade flour, one of alfalfa meal or clover leaves, and one-third measure each of sharp sand and beef scrap. Mix together while dry and then moisten with water and feed in a crumbly mass. They should be given a drink every time they are fed. Arrange the vessel so that they can get their heads into it to rince out their nostrils, but not get their bodies wet until they are six weeks old. Use tepid water the first ten days. Put the coop on sod in the shade and keep the duckling confined in a yard until they get used to their home and then they can be given a free range or a large yard. Keep charcoal and grit so they can get at it and disease and sickness will be unknown in your flock. Keep the coops and yards clean.

To sum the Indian Runner question up, the verdict will be about as follows: An ideal fowl for the man who lives on the farm as well as in town. Wonderful layers of white eggs. Birds of rare beauty. Easy to raise, free from lice and frost bitten combs. A great money maker for every body. Give the Fawn and White Indian Runner a trial this year and you will never regret it.

SUCCESSFUL Poultry Lessons FREE

20 Lessons FREE to Everyone Purchasing a Successful Incubator or Brooder



Let Gilcrest, the successful man, start you right—keep you going right—and help you cash in on the profits this season that you hope to make, can make and deserve to make raising chickens if you start right.

Successful Incubator and Brooder

J. S. Gilcrest, Pres.

These 20 Poultry Lessons Are Really Worth $25 or More You get them FREE with the Incubators *guaranteed* to hatch larger and stronger chicks and a larger percentage than any other incubator when operated under the same conditions. One of the oldest and most successful makes of Incubators sold today. Incubators that "make good" because they *are* made right. Remember Gilcrest handles high-grade poultry, too—stock and eggs of all leading varieties—land and waterfowls.

Successful Grain Sprouter

Built of all steel sections—fireproof. Changes 1 bushel oats into 3 bushels fresh, green, egg-making feed. Makes hens lay in winter. Send for free descriptive circular and low prices.

Write for Catalog of Successful Incubators and Brooders. Enclose 10c if you also want "Proper Care and Feeding of Chicks, Ducks and Turkeys." But write for Incubator catalog sure anyhow.

Rabbit Culture and Standard

The best book ever published on Rabbits. Just what all the breeders are waiting for. It is the last work of the late Dr. Roth, finished by Charles T. Cornman, Editor of The Poultry Item.

The Only Official Standard

of Belgian Hares and every variety of Rabbits ever published. Profusely illustrated.

Every Variety Described and the Official Standards Given

It is full of information from cover to cover that is worth dollars to breeders of Hares and Rabbits. It effectually covers the subject of Feeding, Breeding, Housing, Diseases and their Remedies, Selection of Breeders and Judging, and is the only book published, giving the official standard of every variety. It will be the same to rabbit breeders that the American Standard of Perfection is to poultrymen. Every breeder needs one, and every breeder will eventually have one. **The price of the book is only 50 cents, with paper cover; $1.00 bound in cloth and $1.50 with flexible leather binding.** We can furnish it promptly on receipt of price.

PIGEONS IN WAR-TIME

How the Boys and Men of England and Other Warring Countries Are Loaning Their Birds to the Troops

By Felix J. Koch

Wonderful as is the organization of the telegraph corps of a modern arm in war-time,—splendid as the service arranged for sending messages to headquarters by wireless, mirror-flash and otherwise,—all of these means are subject to being intercepted by the enemy; and, even though when in cypher, of being read, for army men say what Man can tangle, men can untangle, and no cypher that cannot be deciphered by the foe. Wherefore, in time of stress still, armies rely on the humble pigeon to elude the guns of the enemy and bear the word for relief! The birds will fly high, the birds will fly fast, and, besides, sentinels usually have other things to do when on duty, than to pop their guns at any bird that may skim by, in the skies! Many's the pigeon boy of England and otherwheres, therefore, these days, who looks mournfully at the empty pigeon-basket and thinks of the birds he carried in it, ever-increasing distances, to release; let return, and so train for flights for this prize, then, or that.

Today, in many sections of Europe's vast war-zone, the message bearing pigeons have been drafted into the service and now are carrying messages at the behest of the Crown.

Like the army dog, used by the Red Cross in places, and the cows that are carried by certain regiments to furnish milk to the sick, the pigeons do their work well.

One who knows the subject best relates some interesting facts as to the use of the pigeons in war-time.

"All the tribes of pigeons," he states, "are not only swift of flight but they have an intense love of home and a remarkable power of discovering their way home from long distances. These capacities are possessed in a high degree by the carrier and hence it has been celebrated from remotest antiquity.

"Anacron immortalized it as the bearer of epistles. Pliny mentions its use in beleaguered cities. When Modens was invested, he says:—

" 'Of what avail were sentinels, circumvallations, or nots obstructing the rivers, when intelligence could be conveyed by aeriar messengers?'

"In the time of the Crusades these birds were extensively employed by the people of the invested cities, and there are instances mentioned in which the pigeon was captured by the besiegers, and made the bearer of a very different message from that with which it was originally charged. In some cases hawks were kept by the besieging parties, for the express purpose of being flown at and intercepting the carriers. These birds have been also used for the purposes of commerce, as well as those of war. When the Turkey Company of England was flourishing and a number of English merchants were resident at Aleppo,—the grand amporium of the trade,—carrier-pigeons were employed to bring intelligence from the port to the city. Scaaderon, the port of Aleppo, is distant about eighty miles, as the bird flies. The pigeon could bring intelligence over this distance in about three hours: while it could not come by any other channel in much less than the same number of days. Thus, those merchants who employed pigeons could, upon arrival of the ships, obtain information, which they had abundant time to turn to advantage. One case is mentioned, upon authority which there is no reason to doubt, where a merchant killed one of these pigeons by accident and learned from the billet which it bore that there was a great scarcity of galls in England. Taking advantage of this and buying up nearly the whole quantity of the market, he at once cleared a sum which, in those days, was considered an ample fortune.

"In the East, intelligence, was, in former times, communicated by these pigeons much in the same manner as was done by telegraphs in later periods. Slight towers were built, along the line, at thirty or forty miles distance from each other and pigeons were employed in flying from tower to tower. These pigeons wore a very small box, often of gold, of extreme thinness, suspended from the neck, and, as the pigeon wore this box always, it could carry the message and bring back the intelligence. Sentinels were kept constantly watching on the towers, and, as each flew from its own tower to the next and back again, the information, though not so expeditious, certainly could be rendered much more effective than that which the common telegraph afforded.

"In modern times, even, these birds have been used in Europe by stock-speculators between the principal cities. In the United States they were employed, a half century ago, to carry the European news from Halifax to Boston, on the arrival of the steamers there,—they were also used between Sandy Hook and New York to announce the arrival of vessels, but the electric-telegraph has destroyed their vocation, in peace times.

"The performance of these birds will, however, always remain an interesting phenomenon. It is true that they were carefully trained, by being taken out and let loose, at first half a mile from home; then a mile; then two, four, six, ten, twenty miles, and so on. Those used at Aleppo, to which we have alluded, were trained all the way to Scanderoon;—that is, the whole extent of their journey. Only those which showed great aptness were deemed fit for use; and those which were required to achieve a flight of over two hundred and fifty miles, nearly half were lost. If we take into account these facts and consider the amazing reach of the sight of these birds, there is nothing very wonderful in the performance of carrier-pigeons;—they are curious and interesting, as showing the use Man may make of the powers and instincts of birds,—but the untaught migrations of young birds from the northern to the southern zone, displays an infinitely higher and more mysterious instinct."

Be that as it may, the value of the birds in wartime is still tremendous. Spies, doing their work near the enemy's line, dare not risk using the mirror to send a message by heliograph;—for the flash of the light would as surely be seen by foe as friend, and result in their detection and death. A pigeon, carried in a little cage to the purpose, by the spy, can have the message attached,—in code, if need be,—and be released. It will make its way home—and, though it fly right past the foe, the chances are, will elude its sharp-shooters. Again, when telegraph-wires have been cut by the foe, or by the advancing army,—to prevent its use by an enemy, at the rear of it,—when one dare not send by wireless, lest that enemy catch the text, then, what of such use as the pigeon?

Back home, Jack Roosa may be mourning the loss of his pigeons;—folk accustomed to seeing the birds feeding on His Majesty's highroad may mark their absence;—but, off at the front, armies have their fate resting in the word the birds carry and the tame little pigeons has come to its own!

SHIPPING DAY OLDS.

By Mrs. George W. Church, Townville, Pa.

Each year more and more people depend on buying a supply of day-old chicks or ducklings. Where one has not good facilities for hatching this is by far the most satisfactory way.

It is surprising what long distances they can be shipped and still live and thrive.

Personally, I prefer not to send out shipments which will be longer than 60 to 72 hours en route although a few hours longer apparently does not harm.

One should experience no difficulty with day-olds if the proper care is given them at first.

Success depends largely on occustoming them gradually to outside temperature.

If they are to be raised in a brooder it should be thoroughly warmed and regulated to the proper temperature before the chicks or ducklings arrive. Open the boxes in a warm room and as they are removed one by one, dip the bill of each in luke warm water and allow it to take a sip or two.

If the youngsters be chicks let the first few feeds be of hard boiled eggs chopped fine and mixed with crumbs of stale bread and oats flake. If they are ducklings give stale bread soaked in sweet milk, squeezed dry and lightly peppered with sand the size of granulated sugar.

For about three days they should be fed every two hours as they eat such a tiny bit they will do much better if fed little and often than they will if allowed to gorge themselves at long intervals.

Water should be supplied in fountains.

Where one buys only a small number and wishes to raise them with hens the same care should be used in accustoming them to outside temperature. Keep the hens in a warm place and feed them well so they will be willing to hover the young most of the time when they are not eating the first few days, also see that those in the brooder go under the hover.

Oat Sprouter $2.00

For $2.00 you can build the best oat-sprouter on earth; easiest to operate. A boy with no tools but saw and hammer can make one in an evening. Plans 25c.

I. Putman, Route 115, Elmira, N. Y.

Crown Bone Cutter

FEED your hens cut green bone and get more eggs. With a **Crown Bone Cutter** you can cut up all scrap bones easily and quickly, and without any trouble, and have cut bone fresh every day for your poultry. Send at once for free catalogue.

New York State Meet

American Black Minorca Club

By Charles Bauer, State Vice-President.

The Minorca exhibit, held in connection with the Poultry Fanciers' Association Show, at Hempstead, Long Island, November 10th to 14th, was by far the best ever cooped at any state meet in many years. There were one hundred and twenty-four Minorcas on exhibition. Nine cock birds, fifteen hens, twenty-two cockerels, twenty-eight pullets and ten pens.

Frank W. Silcox, Sloastsburgh, N. Y. won the display cup, William R. Mollinesing, cup for best display. J. D. Nurphey, cup for best pullet, a Silver Berry Spoon, offered by James T. Tucker for best colored male, also $24 in cash.

Brother Silcox is to be congratulated! He was there with the goods and was entitled to all he won. Clarence E. Rick, from Ossining, New York, was also well represented and took away a nice slice.

I will just go through the entries with a few comments. Our esteemed secretary, Marcus Allen Northup placed the awards.

1st cock, J. T. Tucker, a dandy big fellow, excellent type, good head, looked well in coop. 2nd cock, Andrew Dauch, a "toss up" between this one and 3rd cock for second place, but very fine specimen. 4th cock, a nice one too, behaved badly in coop. 5th cock, here's one I'd like to own. I thought he should have been placed better. He took color special and was much admired.

Hens. 1st, a tip-top specimen, was an easy winner and am proud to possess her; 2nd, F. W. Silcox, nice long back, good color and comb, and passed well; 3rd hen, another good one, not so well feathered and failed in tail; 4th hen, a nice bird, not through moult and 5th hen, good in color, comb and shape, thought she should have been placed better.

Cockerels. 1st cockerel, F. W. Silcox, a dandy, excellent color, good comb and eye, correct type and an easy winner. 2nd cockerel, Jos. J. Hall, fine color, good head, off type, I thought. 3rd cockerel, good type and carriage, excellent head, failed in color. 4th cockerel, same type as 2nd, a full brother to the same. 5th cockerel, will make a fine bird when more developed.

Pullets. 1st pullet, F. W. Silcox, was just about as good as any Minorca man could wish for, good, long back and low tail, excellent head points and tip-top color. 2nd pullet, H. L. Britz, failed only in color. 3rd pullet, Jos. J. Hall, a good one, failed in tail, not all in. 4th pullet, Clarence R. Rich, fair comb, good color and type, failed in size. 5th pullet, excellent type and color, dandy, well cut comb, nicely carried. She was a bit small. Will be hard to beat later.

Pen Old. 1st, Clarence E. Rich, a nicely balanced pen from whose mating, promising progency can be expected. 2nd, birds of quality, not so well balanced. 3rd, F. W. Silcox, birds nicely mated, failed only in feather. 4th, F. T. Tucker, another good pen, plumage rough.

Young Pens. Brother Rich pen disqualified, white in face of cockerel Brothers Tucker, Silcox, Bretz and myself had our entries disqualified because of stubbs.

The exhibit was a success in every way and the members who accompanied their exhibits to Hempstead, departed well satisfied. I wish to thank the Brother members who exhibited for it was wholly through their support and effort that made our meet such a success and the envy of the other state branches.

The following is a list of awards as placed by Mr. Northup:

Cocks

J. T. Tucker, 1st; Andrew Dauch, 2nd; Clarence R. Rich, 3rd, Charles Bauer, 4th, Frank W. Silcox, 5th.

Hens

Charles Bauer, 1st, Frank W. Silcox, 2nd, F. T. Tucker, 3rd, Alvin Smith, 4th, Wm. H. Tuthill, 5th, Frank W. Silcox, 6th.

Cockerels

Frank W. Silcox, 1st, Jos. J. Hall, 2nd, Charles Bauer, 3rd, Jos. Holt, 4th, Alvin Smith, 5th, J. T. Tucker, 6th, Andrew G. Dauch, 7th, Frank W. Silcox, 8th.

Pullets

F. W. Silcox, 1st, Harry L. Bretz, 2nd, Jos. H. Hall, 3rd, Clarence E. Rich, 4th, Charles Bauer, 5th, Alvin Smith, 6th, Clarence E. Rich, 7th, Charles Bauer, 8th, F. W. Silcox, 9th, Harry L. Bretz, 10th.

Old Pen

Clarence E. Rich, 1st, Charles Bauer, 2nd, F. W. Silcox, 3rd, J. T. Tucker, 4th.

Young Pen

Clarence E. Rich, disqualified, white in face, J. T. Tucker, disqualified, stubbs; H. L. Bretz, disqualified, stubbs; Charles Bauer, disqualified, stubbs.

INCUBATION OF EGGS IN EGYPT.

It is said that the ancient Egyptians were great poultry fanciers and knew as much, if not more, regarding incubation and the care of poultry, as we do today.

We are wondering if they gave the same care to their poultry, if they were careful that they were kept clean, and what sort of implements were used. We wonder what the ancients would think of—for instance—the Mehler Scraper made by the Mehler Garden Tool Company, which as far as we know has the advantage over all other such tools, being so constructed that it works just as effectively on the push as it does on the pull.

There seems to be, if one might say it, almost a leverage by which it does the work, and even tho' it is almost three times the width of the old hoe, it works just as easily and accomplishes more than three times the work.

Undoubtedly considerable expense and much time has been consumed by the Mehler Garden Tool Company in perfecting the Mehler Scraper, as it is in perfect proportion for the work—light, yet strong, and the proper steel.

Like many articles of merit it was the farmer and the poultryman who first brought the great need of this tool to the attention of the Mehler Garden Tool Company, and had them get their experts working, of which the Mehler Scraper is the result, and the fact that there has been no change in proportions for the last two years is a proof that the proportions are perfect.

It was found that thirteen inches wide was as much as a man could draw or push comfortably and it was made four inches deep for the same reason, which allows it to pass under the roosts without disturbing them. It has not the goose neck spring which in the regular garden hoe is a great disadvantage when scraping a dropping board as it causes vibration and will take hold in jerks and jumps, thus preventing good, clean work being done.

The Mehler Scraper is tapered at the top which gives an angle which can be fitted against the back or even in the corners. The top was bent for one inch at an angle which allows you to push the droopings—as when they were frozen.

Another special feature is the way the top and bottom edges are sharpened with a scraper bevil which allows it to take hold instead of springing over the droppings.

Four foot and good stout ash was found to answer the general purpose and a high carbon steel to make it hold the edge.

These tools have now been on the market for the second season and those who have seen them have certainly expressed the feeling that they were betr and did more than the manufacturers claimed.

We therefore suggest that all dealers get in on the ground floor on the tools as every poultryman is bound to have one in time, and especially at the reasonable price charged for the Mehler Scraper.

Bulletin of the Storrs Agricultural Experiment Station

Fourth Annual International Egg-laying Contest, Report for January

By Wm. F. Kirkpatrick.

The judging of the birds in the laying contest is nearly finished. What was said in previous reports in regard to the Plymouth Rocks and Wyandottes being cut more for color than for shape seems to be largely true of the other breeds. Tabulation of the score cards for the Rhode Island Reds shows that bird 389, one of the Rural New Yorker's "Favorite Hens" was the highest scoring individual with 90¾. The second best score was 90¼ by hen 280 owned by Homer P. Deming. Hens 360 and 400 owned respeatively by A. B. Brundage and S. G. McLean tied for third with a score of 90 each. The best shaped Rhode Island Red was hen 252 owned by Dr. J. C. Dingman, Spring Valley, N. Y. and was cut only two points for shape. The best colored individual was hen 278 owned by Homer P. Deming, Robertsville, Conn. and was cut only 4¼ points for color. The three highest scoring pens are owned by A. B. Brundage, Danbury, Conn., S. G. McLean, South Glastonbury, Conn. and D. E. Warner, Bridgeton, R. I. and their scores in their respective order are 88.4, 88.1, 88.0. The average score of all the Rhode Island Reds taken together was nearly 85¾. Ten per cent of the Reds in the contest or 19 birds out of the 190 entered were disqualified by the Judge for stubs in the shanks, white ear lobes, and side sprigs, Thus it will be noted that the Reds on an average have scored lower than either the Rocks or the Wyandottes, falling below the Rocks by about three points per bird and nearly five points below the Wyandottes. This however was perhaps to be expected on account of the fact that there are so many of the white variety entered in each of the other two breeds and the Reds had no way to offset this advantage.

The total yield for all pens for the month of January was exceedingly satisfactory. The birds laid 4072 eggs more than they did in December and relatively 3638 eggs more than for January of last year or a total production for the month of 8262, an average of 8¼ eggs for each and every hen on the plant. There has not been any unseasonably cold weather during the month nor any unusual amount of snow but there have been a great many cloudy days. In other words there has been little sunshine and a hen never seems to be quite so happy nor quite so productive when such conditions obtain as when there is at least a reasonable number of clear, dry, sunshiny days. A hen seems to be able to stand a wonderful amount of cold if she can only have a cheery sunshiny day in which to do her work. The poultry man cannot of course, control the weather but he ought to construct his hen houses so as to make use of every bit of available light and sunshine.

The Mediterranean varieties seem to be more affected by cold than the others, thus during the month of January the fifty-three pens of heavier breeds including Rocks, Reds, Wyandottes, Brahmas and Dominiques, though constituting only a trifle more than one-half the birds in the competition, laid 63 per cent of the eggs for the month. On the other hand the lighter breeds including the Leghorns, Campines, and Buttercups make up forty-seven per cent of the birds in the contest but laid only 37 per cent of the eggs during January. At the end of the first three months the hens are more than six thousand eggs ahead of last year. The following table affords a comparison for the first three months between the present contest and the competition last year, showing the best pen in each of the breeds named.

Breed	1914	1915
White Wyandottes	491	484
Rhode Island Reds	297	427
Plymouth Rocks	281	389
Sour milk pens	382	344
White Leghorns	405	333
Average pen score—all breeds	126	189

The monthly awards for January are announced as follows: blue ribbon or first prize was won by Hillview Farm's Rhode Island Reds of St. Albans, Vt. with a yield of 177 eggs. The Storrs Experiment Station's sour milk pen of White Wyandottes were in reality second with 176 but inasmuch as they are not in competition the second prize ribbon has been awarded to Springdale Poultry Farm, Durham, Conn. whose Rhode Island Reds laid 170 eggs during the month. The third prize was won by Barron's English Wyandottes with a yield of 164 eggs.

Experimental Pens—The experiment-

Black Orpingtons
White Wyandottes

Some choice stock for sale at $8 and up. Blue ribbon winners at Frederick. Write your wants. Satisfaction guaranteed.

DO YOU KEEP AN

Egg and Hatching

Record?

If so, now is the time to begin and you should get a copy of our new poultry book

Poultry Common Sense

Containing feed formulas of all kinds, general principles in breeding, home treatment of poultry diseases, natural and artificial incubation in addition to a complete

YEARLY PEN, EGG AND HATCHING RECORD

The records are the result of the combined experience of several prominent and very successful poultrymen and are unquestionably the simplest and most complete blanks for keeping account of poultry ever devised. These blanks are copyrighted and are worth several times the price of the book. They are complete for a full year by months.

Price of Poultry Common Sense with the Records, 50 cents, or with Poultry Success one year 75 cents.

C. F. TOWNSEND, WEEDSPORT, N. Y.

al pens have been laying well with the single exception of the Brahmas. From the table below it will be seen that at the end of the first three months the sour milk pens have produced more eggs in the case of the Rocks, Wyandottes and Leghorns, but the reverse is true of the Reds and Brahmas. The total for the five groups combined seems to indicate an advantage in the use of milk. Another three months of course mean that the figures will become more trustworthy and the year's record will be better than either.

Breed	Pen	No Milk	Milk
Plymouth Rocks	5 & 6	201	212
White Wyandottes	19 & 20	153	249
Rhode Island Reds	37 & 38	242	135
Light Brahmas	45 & 46	86	75
White Leghorns	59 & 60	292	344
Total		974	1015

So many inquiries have been made regarding the exact method of feeding milk to hens that it seems fitting to describe briefly the plan employed in the contest. There are five experimental groups as mentioned above. In each group there are two pens. In each case the pen having the odd number is fed the regulor contest ration, the pens with the even numbers are receiving exactly the same rations with the single exception that thick, sour, loppered or clabbered skim milk is substituted for the meat part of the mash. The milk pens have water just as the others do, and in addition to this, all the thickened milk they care to consume. It is found that each ten birds will eat on an average from one to two quarts per day depending principally perhaps on the weather, consuming the lesser amount on cold days.

The Storrs Experiment Station has not only been trying the use of milk as a ration on its experimental pens in the laying contest but has also been using milk for growing chicks for the past three years. The data thus collected together with the results of work done at other experimnt stations point to the fact that milk as a ration for chicks and for laying hens has a very definite feeding value. The following table indicates fairly closely the price the poultryman can afford to pay for milk for the several purposes.

Baby chicks, first week, 4 cents quart, $2.00 100 lbs.

Chickens, first six weeks, 2 cents quart, $1.00 100 lbs.

Chickens, first six months, 1 cent quart, 50c 100 lbs.

Laying hens or pullets, 1 cent quart, 50c 100 lbs.

Breeding stock, 2 cents quart, $1.00 100 lbs.

The ten best individuals to date are as follows:

Bf. Wyandotte No. 229, Holden, Mass., 72 eggs.

Barred Rock, 23, Mt. Carmel, Conn., 68 eggs.

R. I. Red, 344, Temple, N. H., 68 eggs.

Wh. Wyandotte, 151, Columbia, Conn., 67 eggs.

Barred Rock, 3, B'kf'd Ctre, Conn., 66 eggs.

R. I. Reds, 269, St. Albans, Vt., 65 eggs.

Wh. Wyandotte, 153, Columbia, Conn., 63 eggs.

Wh. Wyandotte, 211, Willimantic, Conn., 63 eggs.

R. I. Red, 321, Groton, Mass., 63 eggs.

R. I. Red, 422 Attleboro, Mass., 63 eggs.

It will be noted below that a good many changes continue to ocur in the ten leading pens. The English pen of White Wyandotes that held seocnd place in November and made first in December is still at the top. The Storrs Station's experimental pen of Leghorns without milk has not been able to hold its place among the leaders. The sour milk pen of Leghorns has dropped from second place to fifth, having been passed during the month by a Vermont pen of Rhode Island Reds, a Connecticut pen of Barred Rocks and a New Hampshire pen of Reds. A Long Island pen of Leghorns and also a Connecticut pen that were listed among the leaders at the end of December have been dropped entirely. The pen of American Dominiques has moved from eleventh place to eighth. The pens listed show just the same number of breeds among the leaders a month ago but the representation is on a different basis. It will be noted that there are now two pens of Barred Rocks, two of White Wyandottes, three of Leghorns, three of Reds, and one of Dominiques, all of which means that the Leghorns have three pens less among the leaders than thy had a month ago whereas the Reds have one more and the Rocks one more.

The ten leading pens to date are as follows:

No. 15. Ed Cam, Hoghton, near Preston, England. White Wyandottes, 484.

No. 27. Hillview Poultry Farm, St. Albans, Vt. Rhode Island Reds, 427.

No. 1. Merritt M. Clark, Brookfield, Center, Conn. Barrel Rocks, 389.

No. 35. Colonial Farm, Temple, N. H. Rhode Island Reds, 357.

No. 60. Storrs Exp. Station, (Sour milk pen)*. White Leghorns, 344.

No. 17. Neale Bros., Apponaug, R. I. White Wyandottes, 337.

No. 73. A. P. Robinson, Calverton, N. Y. White Leghorns, 333.

No. 47. H. B. Hiller, Unionville, Conn. American Dominiques, 328.

No. 2. Frank L. Tuttle, Southboro, Mass. Barred Rocks, 319.

No. 33. Pinecrest Orchards, Groton, Mass. Rhode Island Reds, 317.

No. 62. Windsweep Farm, Redding Ridge, Conn. While Leghorns, 311.

*Not in competition.

Free To The Constipated

A Trial of a New Remedy that Does the Work Without Distress or Trouble of Any Kind.

A new preparation for Constipation has been perfected that overcomes all those objections so characteristic of salts, calomel, mineral waters and other harsh purgatives. We want you to try this remedy at our expense.

No matter whether yours is a case of long-standing or recent development, whether it is present as chronic constipation or occasional Biliousness, you should try this remedy. No matter what your age, occupation or sex may be, if you suffer from any form of Constipation you need this remedy.

We especially want to send it to those apparently hopeless cases where all forms of calomel, pills, tablets, salts, mineral waters, etc., have failed to give anything but temporary relief. We want to show everyone at our own expense, that this remedy will end at once and for all time, all those troubles so intimately associated with Constipation, such as indigestion, sick-headache, dyspepsia, dizziness, biliousness auto-intoxication, etc., etc.

This free offer is too important to neglect a single day. Write now and begin your cure at once. Send no money. Simply send your name and address, to The Calumet Chemical Company, Dept. A. D., 3027 Groveland Ave., Chicago, Ill., and they will mail you a free trail of this precious remedy. Write today.

SUBURBAN STRAIN
S. C. Rhode Island Reds

Winners at Hagerstown, Allentown, Lancaster, York, Hanover, etc.

A lot of choice breeding males, must be sold. Eggs and day-old chicks.

A guarantee with every order.

National Contest Report for January

American and English White Leghorns Tie for the Honors Thus Far---It is Greatly to the Interest of Every Breeder of Poultry to Hatch at Least a Few Early Chicks.

Then, too, the test of a hen's efficiency is her ability to lay winter eggs. The winter egg period embraces the months of December, January and February. Sometimes a hen that may have the winter laying characteristic does not lay enough eggs during these months to indicate that she can be classed as a winter producer even in her pullet year. One factor that controls winter egg production is the season that a bird is hatched. The early hatched stock will often be brought to maturity in the early part of the fall and moult during the months of December and January, so it is easily seen that the time of hatching has a big influence on egg production. Many of our birds this year have loafed on the job during the last month on account of moult. This has prevented them from giving as good account of themselves as they might have done. Many more were immature and lost time for this reason.

There is no question that is asked more times by the prospective keeper of poultry than "What breed shall I carry?" The answer we generally give him is that it depends whether he wants fowls for back yard or the farm, or wishes to go into the specialty business to produce eggs for the market. The next thing our inquirer wants to know is, "Which breed has the best layers?" We tell him that depends upon what the fowl has inherited, as good laying is not confined to any one bred. It is a scientific fact that you cannot develop that which an animal or fowl does not inherit. You cannot give enough feed to a hen that has not inherited the egg-laying characteristic to make her produce eggs. For example, there is one hen that has been in the National Contest for two years that has never produced an egg.

Some hens lay during the winter months, some do not. Some will put fat on their bodies, others put their feed into eggs. There is one pen at the Missouri Station selected on account of poor laying points, thick pelvic bones and narrow behind. These hens are given the same feed that a check pen is fed which is selected for layers, thin pelvic bons and lots of capacity. The hens of poor laying makeup are putting their feed into fat, the latter are using the feed to produce eggs. The ones selected for egg production from external appearances alone are far in advance of those selected in the same way as non-layers.

The dairy man gives an essential point of good producing dairy cow that she must have a large capacity to consume a great amount of food. It is natural to give this as an essential point of a good hen. She must have capacity to use her feed by converting it into eggs.

The records for the past year indicate that some hens have a tendency to consume a great amount of feed but little capacity to convert it into eggs. Those hens which do not have this capacity in these days of high prices are a big drain upon the revenne of the keeper and it must inevitably turn the attention of every breeder of the country to the importance of breeding hens that have a feed- converting power.

The Wyandottes are giving further evidence this month that they have the winter laying capacity, and have led the contest on pen record. In fact, the dual purpose breeds have the lead over the Mediterranean breeds for the month of January.

In the southern country there are no better months in the year to hatch incubator chicks than the months of Febrary and March. They can be matured in time to catch the early egg market and the males can be culled for the broiler market. It is more difficult to start the work in the northern portion of the United Sates at such an early date, but even if hatched later, the advantages in climate help to counterbalance the earliness of the early southern hatched chickens.

The big prices of grain need not deter you from making big preparations to rear a good flock of layers for the next winter's work.

Another big advantage of the early hatch is that you can get some birds ready for the big World's Fair Show which will be held at San Francisco. It will pay you to bring off some with this in view. There never has been offered such an opportunity for the breeders as they will have to show to the tremendous crowds that will see this big event.

Several pens of the foreign birds are being held over another year and trapnested. One pen from England and several of the pens from Australia and New Zealand are laying many more eggs than they did last year. If they can continue to do as well as they are at present, their second year will be far in advance of the first.

The ten highest pens for the three months are as follows:

Pen 1. S. C. W. Leghorns, Pennsylvania, 148 eggs.

Pen 21. S. C. W. Leghorns, England, 148 eggs.

Pen 52. Buff Orpingtons, Pennsylvania, 146 eggs.

Pen 75. R. I. Whites, Illinois, 140 eggs.

Pen 43. White Orpingtons, Wisconsin, 138 eggs.

Pen 57. White Wyandottes, England, 129 eggs.

Pen 61. Silver Wyandottes, Iowa, 126 eggs.

Pen 19. S. C. W. Leghorns, England, 125 eggs.

Pen 3. S. C. W. Leghorns, Pennsylvania, 124 eggs.

Pen 67. Barred P. Rocks, Illinois, 111 eggs.

The ten highest pens for January are as follows:

Pen 61. Silver Wyandottes, Iowa, 77 eggs.

Pen 75. R. I. Whites, Illinois, 75 eggs.

Pen 43. White Orpingtons, Wisconsin, 72 eggs.

Pen 78. R. C. Reds, Arkansas, 60 eggs.

Pen 50. Silver Penciled Wyandottes, Iowa, 59 eggs.

Pen 32. White Orpingtons, Illinois, 58 eggs.

Pen 77. R. C. Reds, Ohio, 56 eggs.

Pen 5. S. C. W. Leghorns, Illinois, 55 eggs.

Pen 15. S. C. W. Leghorns, Missouri, 54 eggs.

Pen 63. Barred P. Rocks, Iowa, 54 eggs.

Pen 61 Silver Wyandottes, owned by V. G. Warner, Bloomfield, Iowa, won the silver loving cup for January by laying 77 eggs.

Early Hatch and Feeding of Chicks

The larger breeds as the Rocks, Wyandottes, or Orpingtons should be hatched in February or March, properly cared for and fed so as to reach full development and have proper weight by fall. Selection of pullets for breeding should be made from these early hatches. Strength and vigor must be kept in mind in making these selections.

The lighter breeds as the Leghorns may be hatched about the first of April. Pullets hatched at this time will begin to lay in the fall and will probably not moult until the following fall. Thus saving the loss incurred by the birds going through a moult. Often such breeds hatched a month or two earlier begin laying in the early fall then begin to moult which causes them to stop laying for a while.

The following ration is used in chick feeding this year at the North Carolina Agricultural Experiment Station.

The baby chicks for the first five days are fed a mixture of

Rolled oats, 8 parts, Bread crumbs or cracker waste, 8 parts, Sifted beef scrap, 2 parts, Bone meal, 1 part.

This mixture is mixed with sour skimmed milk and fed five times a day. Shredded green food, fine grit and charcoal is scattered over the food.

From five to fifteen days the following mixture is given:

Crack wheat, 3 parts, Cracked corn (fine), 2 parts, Pinhead oatmeal, 1 part.

Scattered in light litter morning and evening.

The following mixture with sour milk is given 3 times a day in addition to the above. At the end of fifteen days it is fed only twice a day.

Wheat bran, 3 parts, Corn meal, 3 parts, Wheat middlings, 3 parts, Beef scrap, 3 parts, Bone meal, 1 part.

After the chicks are 30 days old give moist mash once a day. And keep some mash dry in dry mash hoppers before them at all times. And give the following in litter morning and evening:

Whole wheat, 3 parts, Cracked corn, 2 parts, Hulled oats, 1 part.

After the chicks are six weeks old continue dry mash as above and give the whole wheat and cracked corn equal parts in hopper.

Chicks should be provided with green pasture made by spading up their run and sowing it down in oats or rape. Clean water should be kept before them at all times. The pans must be thoroughly washed each day. Avoid damp, foul ground and if brooding is done by the hen keep her confined till chicks are weaned and remove to clean fresh ground once a week. Disinfect, with a 5 per cent carbolic acid solution or other equally good disinfectant, all feeding utensils and brooder or brood coop frequently.

The Experiment Station and College Breeding Work.

Considerable time and money have been spent in introducing new blood into the poultry flocks of the N. C. Agricultural Experiment Station. The best blood lines obtainable of the different varieties that are being bred mentioned below:

S. C. Rhode Island Red, S. C. White Leghorn, Barred Plymouth Rock, Buff Orpington, Columbian Wyandottes, Partridge Plymouth Rock, Silver Penciled Wyandotte, Houdan, Dark Cornish, Silver Spangled Hamburg, Golden Wyandotte, White-faced Black Spanish, White Plymouth Rock, Silver Campine, Buff Plymouth Rock, Black Cochin Bantam, Bronze Turkeys, White Chinese Geese, Pekin Ducks.

These will be uesd in College and Station experimental work.

The College Poultry Reading Room.

A Poultry Science reading room has been provided in the Department of Poultry Science of the College. To this reading room the following poultry papers come regularly:

Profitable Poultry, The Pacific Poultryman, The Campine Herald, The Ancona World, The American Poultry Journal, The Reliable Poultry Journal, The American Poultry Advocate, The Western Poultry Journal, Poultry Culture, Rhode Island Red Journal, Poultry Post, Western Poultry, Useful Poultry Journal, Canadian Poultry Review, Big Fair Poultry Journal, Pacific Poultry Craft, The Industrious Hen, The O. K. Poultry Journal, The Poultry News, The Poultry Fancier, The Poultry Keeper, Michigan Poultry Breeder, American Bantam Fancier, Poultry, German Poultry and Pet Stock Journal, Farm Poultry, American Poultry Instructor, American Poultry World, The Southern Poultryman, The Carolina Poutryman, The Poultry Review, Poultry Tribune, Poultry Record, Poultry Husbandry, The Feathered World, and several others.

Our slogan is "Raise more poultry and better poultry in North Carolina".

B. F. Kaupp,
Poutry Investigations and Pathology.

COMMUNICATION.

Marshalltown, Ia., Dec. 29, 1914.

H. I. Co.,
Salem, Va.

"I have used "OCULUM" on my OWN FLOCK for THREE years and have shown all the fanciers here how it improved the VITALITY of my flock from YEAR to YEAR and also the FERTILITY of the eggs from PENNED UP fowls and the BEST MEN are interested in "OCULUM" on this account."

Readers of this Journal should learn more about "OCULUM". Its manufacturers, The H. I. Co., Salem, Va., have been regular advertisers with us for years. They will treat you right. Please mention this Journal when writing.—Ed.

This Man Got
FOUR 100% PERFECT HATCHES
in the Progressive Incubator

J. R. Allen of Portsmouth, Ohio, writes us that he got four 100% perfect hatches from his Progressive Incubator and raised them all the Progressive way. Think of it—every egg hatched a thrifty chick! Why look further for a successful incubator?

$7.35 LOWEST PRICE YET For 155 EGG INCUBATOR

Surest hatchers on market—*only incubator with hundreds of dead air cells.* Deep nursery—double doors—improved double disc temperature regulator—copper boiler—hot water heat—tested thermometer—heavy metal safety lamp—egg tester—everything you need to get record results. *Order today for quick action,* or write for Big Free Book about Making Poultry Pay.

No extras to buy. Freight prepaid east of Rockies. Shipped set up ready for the eggs. All wood parts of Select California Redwood. 155-egg Incubator alone, $7.35—with 155-chick hot water Brooder, $9.85. Money back with 8 per cent interest if not found as claimed.

PROGRESSIVE INCUBATOR CO., Box 222, Racine, Wis.

What Are You Going to Do About It

By Mrs. Laura Shorts, Randolph, Pa.

Feed prices are soaring. This is an unmistakeable fact. Authorized statistics tell us that the price of wheat is now double the price that prevailed at the beginning of the European War.

Prices are beyond our control. What are you brother poultrymen going to do about it? True, those living on farms may raise the greater portion of their poutry feed, but whether we raise or buy it, the value remains the same.

Now this article is not written for the benefit of the rich fancier who has a demand for all the stock and eggs produced at enormous prices. His future is secure and he need not worry about feed prices. But to the poultryman who, having not yet acquired wealth, depends on his flock of fowls to partially or wholly support himself and family, must keep the strain of fowl that will produce most eggs at lowest possible cost to make his poultry keeping profitable.

Every man is in business for profit. The cost of production and amount produced are two factors that determine the size of the profit. Eggs are in demand. Prices are good. Now about the cost of production. The more we feed hens, the more it costs to "produce" eggs. Big fowls are not the "egg machines" they should be, they cost more to feed and they produce less eggs.

The medium sized fowls, such as the Anconas, etc., are light eaters and heavy layers. The cost of producing eggs with smaller breeds is less than larger fowl and the production generally greater. Anconas often begin laying at four and one-half months and keep right on laying, thus soon paying for what they have cost the owner previous to their producing period. They are among the best as winter layers, are active, and seldom get broody. From the writer's point of view they are rightly named the "20th Century egg Machines". All agree that "its the hen that lays that pays". Occasionally there may be found a farm where the profits are made by raising table fowl, but such farms are rare and will become more so as feed prices advance.

Anconas belong to the Mediterranean class and are about the size of the Leghorn. After making a study of and experimenting with many strains of fowl, weighing in the balance, their good qualities, also their faults, I find Anconas the nearest the "Ideal" fowl for my purposes. Personally, I consider them the proltable, practical, utility fowl of America.

They are a favorite fowl with the Fancier also, as they are beautiful, graceful birds, present a splendid appearance and do not require washing before taking to shows. They are a fine table fowl, their flesh being tender and juicy, skin and legs yellow in color.

The following feeding method gives variety enough for Anconas and they will produce an abundance of eggs on this ration. As a scratch feed, in light litter, I feed a mixture of the following grains, wheat, buckwheat, oats, corn and a small amount of sunflower seed. About three pints of this mixture is sufficient for thirty fowl. I open the dry mash hopper about 11 A. M. and always keep grit, oyster shells and charcoal within reach.

During the winter, green cut bone is excellent, but I get good results when unable to procure this by feedin, skimmed milk (sour is best). Green feed must not be overlooked in winter. Sprouted oats are best green feed, but when not convenient to feed them, cabbage, apples, and mangles are good.

It probably is not necessary to dwell on the importance of a clean poultry house, birds free from lice, etc., as every one knows that the comfortable hen is the one that lays. Another thing about feeding. Do not over feed. Feed your birds just what they will eat up clean and you will have healthy and profitable fowl.

As the hatching season is already with us, count well the cost of production, then decide to raise "Anconas" the fowls that eat little and produce much. The egg laying champions of the World, so far as the writer's experience goes.

HATCHING RUNNER EGGS.

By Mrs. George W. Church,
Townville, Pa.

For best results in hatching, Runner eggs require a little different treatment than do hen eggs as the shells are thicker and the membrane tougher.

When hatched by hens the nests should be on or near the ground and a sod or shoverful of earth made slightly concave in the bottom. Sprinkle well with water and put in straw. If at any time the eggs or nest become soiled in any way the eggs should be washed in luke warm water but not wiped and fresh straw put in the nest. Test the eggs at least three times and remove any that are dead or infertile. After about the 10th day any that die will turn black and give the shell a mottled appearance. They give off a strong odor which endangers the rest of the hatch, hence should be removed at once.

Moisture should be supplied at intervals during incubation. The amount depends on the weather, hence no exact rule can be given.

One must use judgment. In a very dry time they may be sprinkled twice a week until pipped, then give a thorough wetting. Always use water at about 110 degrees.

Usually the ducklings will all be out by the end of the 27th day. They may sometimes be heard as early as the 23d day and some may be pipped on the 24th day but they will not come out before the 26th.

A good many incubators hatch duck eggs just as well as hens' eggs while some give very poor results. The great difficulty seems to be lack of moisture and ventilation.

In using hot air machines I get good results by leaving ventilators open until eggs begin to pip and by sprinkling the eggs every morning and giving a thorough wetting when pipped.

New Rupture Cure

DON'T WEAR A TRUSS

Brooks' Appliance, New discovery. Wonderful. No obnoxious springs or pads. Automatic Air Cushions. Binds and draws the broken parts together as you would a broken limb. No salves. No plasters. No lies. Durable, cheap. Sent on trial to prove it. Full informatioin and booklet FREE.

H. P. Schwab Will Assume Charge of This Publication Beginning With April Issue

Final arrangements were completed during the Garden Show, at New York City, whereby H. P. Schwab, of Irondequois, N. Y., one of our most successful poultrymen and widely known Poultry Judges, will take full and complete charge of the Poultry Fancier, beginning with the April issue, at which time the name of the Poultry Fancier will be changed to Everybody's Poultry Journal.

Mr. Schwab's many friends throughout the United States will, without question, wish him every possible success in his new undertaking.

Mr. Schwab has been the Eastern representative of the American Poultry Journal for a number of years, and his association with this important publication will amply fit him to cope with the wide range of responsibilities which will devolve upon him in his new field of endeavor.

Many improvements are being planned for this publication which, we are morally certain will enhance the value of this journal and make it more popular than ever, among the rank file of poultrymen.

THANK YOU

It has been very gratifying to the management of the Fancier to be the recipient of so many congratulatory communications from practically every section of the United States, with reference to various articles which have appeared in the January and February issues of the Fancier. Scores of letters of like nature have found their way to the office of Mr. H. V. Tormohlen, of Portland, Ind., whose timely article on "The Louse Question A Live Issue in The Dead of Winter" (which we featured in our January issue), has opened the eyes of many of our oldest, as well as amateur poultrymen concerning the fact that this pest of the poultry kingdom bears "Eternal Watching" if its ravages are to be check-mated and yearly comfort assured our feathered friends in their laying quarters, or a full quoto of returns are to be realized by the men and women who spend their time, energy and money in the interest of more and better poultry.

The splendid article of Judge C. F. Townsend, of Weedsport, N. Y., which appeared in the January number of the Fancier under the caption of "The Best Breed", struck a popular chord among the rank and file of our poultrymen. Judge Townsend sent a note to our office over a week before this comment was made (February 15th) that he had received over one hundred letters commending his article and the policy of the Fancier on questions of vital importance to everyone interested in the poultry industry.

We take pleasure in announcing at this time that Judge Townsend will furnish another article for the April issue of the Fancier, which in our estimation, will be worth many times the price of a year's subscription to this journal.

The Judge's article in this issue of the Fancier strikes pretty deep into the under-current of "Present Day Unscrupulous Advertising" and although it is "Armed with Teeth That Wound" with rather undue severity, we are publishing the same in the interests of honest advertisers and the poultry fraternity at large. It is necessary to be radical, by times, in order to secure a proper hearing in the interests of justice and fair play in any cause and the writer is of the opinion that the present is an oportune time to "clarify the stream" that has been so unwontonly poluted "lo these many years", by a few men who have seen fit to place dollars before decency and riches before honor in an industry so necessary to the vital welfare and every day comfort of the "world's millions".

THEO. HEWES SELLS INTERESTS IN INLAND POULTRY JOURNAL

Theo. Hewes, formerly President and Editor of the Inland Poultry Journal, published at Indianapolis, Ind., has recently disposed of all his interests in the Inland to John A. Kohl, former Secretary and Treasurer, and F. W. Hallett, Associate Editor of the Inland.

Judge Hewes will devote a large amount of his time in the future looking after the interests of the Chicago Poultry Show and will again take up the "Judges Stick" in the interest of honest poultry judging.

We have always enjoyed Mr. Hewe's editorials as they have always been fealess, uncompromising and to the point and it would be a severe loss to the interests of Poultry Journalism if Mr. Hewes was to lay aside his pen and no longer enrich the archives of the poultry publishing industry with his timely and original articles. However, we know of no man who is more capable or more conscientious as a poultry judge than Mr. Hewes and if we are to loose on the one hand, through his retirement, as the editor of the Inland Poultry Journal, the poultry industry will be sure to win unusual benefits from Mr. Hewes endeavor in the future as a poultry judge.

THE 1915 STANDARD OF PERFECTION

Along about the middle of December, many publishers were assured that the 1915 Standard of Perfection would be ready for distribution by the 1st of January, and a large number of poultry publications began at once to advertise the new Standard of Perfection. But now the word reaches our office that this publication will not be off the press before the 1st of March and possibly later.

Many orders have been sent in to different poultry publishing houses for

the new Standard and poultrymen are becoming rather restless over the disappointment which they have experienced as a result of what seems to us a needless delay in the publication of the Standard.

If this volume is to be of any benefit to the poultrymen for 1915, it should be rushed to completion without delay as many poultry raisers are waiting for the Standard as a guide by which to mate their birds for the coming breeding season.

Hustle it along, gentlemen, for this courtesy is due the poultrymen at large in whose interest the Standard is published.

THE POSSIBILITIES OF UTILITY POULTRY DEMONSTRATED YEARS AGO

In the January issue of the American Poultry World, page 164, is one of the most illuminating articles we have ever read on the utility side of the poultry question. It is written by Dr. E. C. Woldorf, of Buffalo, N. Y. in which the doctor gives his experience with utility poultry.

Way back in 1889, during these experiments, the doctor was able to accomplish results from a poultry utility standpoint, with a number of birds promiscuously purchased on the markets of Buffalo in a specially constructed poultry house, that makes the present day achievement among poultrymen in the production of high egg records look rather insignificant to say the least. This experiment was carried on through three successive seasons and the doctor emphatically states that he was able to induce his hens to lay as high as ten eggs each per week. It was certainly a novel experiment and the results accomplished seemed to justify the time and labor expended.

The ideas which the doctor advances in this article may prove a nucleous around which other breeders may build a sure foundation through careful and pains-taking experiment to enhance the value of the poultry industry from a utility standpoint. The doctor is emphatical in his statement that he believes even greater results in this day and age of the world, from a carefully selected pen of birds, can be accomplished than he was able to achieve way back in 1889.

This article ought to be an incentive to our ambitious utility poultrymen to demonstrate that nature simply furnishes a foundation for almost unlimited development in any field of activity.

CORRECTION.

We have just received word from Mr. John M. Sessions, Baltimore, Md. that the Philadelphia awards, as published in the February issue of the Fancier did not have his correct winnings. They should have read First Hen, also special for best Bantam Hen, also National Bantam Asociation special for best Hen. We understand that this same hen that won first at Philadelphai, also carried off the first prize at the recent Madison Square Garden Show in a class of sixteen birds.

REGAL MATINGS 1915
WHITE WYANDOTTES

For the season of 1915, I have mated up twenty beautiful exhibition matings. They are all headed by my winning males at Boston and the New York State Fair and contain all my exhibition females. Regal White Wyandottes have made wonderful records in the show room, but as a vigorous, rugged, heavy egg producing strain, they are in a class by themselves. February 15th we have 400 thrifty young chicks, practically out of danger, having lost only about ten chicks to date. Upon my show record and the utility qualities of my birds, I base my claim that Regal White Wyandottes are the best in the world. Can you make a better choice Note what one customer says:

Woodsfield, Ohio, Dec. 5, 1914.

From the setting of eggs from the pen headed by Sensation, I hatched eleven chicks and raised them all. I now have five cockerels that I value at $70. and four pullets I value at $20. This makes $90. worth of stock raised from the eggs which I call a good investment, in fact, I would not care to sell some of these birds at any price. In the past few years I have purchased eggs from several of the large farms but never received for my money such genuine eggs and I have paid as high as $30. per setting.

Assuring you that I am delighted with your method of doing business and your stock and that I am a "Regal Booster", I beg to remain

Yours very truly,

J. W. Armstrong.

Exhibition Matings, Pens 1 to 20 (as they run) $5.00 per 15, $9.00 per 30, $12.00 per 45, $24.00 per 100. Pens 5 to 12 are special matings. Eggs from special matings only $10.00 per 15, $18.00 per 30, $25.00 per 45, $50.00 per 100.

RECORD LAYING PENS (DORCAS LINE)

Pens 21 to 26 are composed of trap-nested females with high records mated to males bred from heavy laying females. From these pens eggs are $5. per 15, $15.00 per 50, $27.00 per 100. Utility eggs from vigorous surplus stock are $5.00 per 50, $9.00 per 100, $17.00 per 200, $25.00 per 300.

SPECIAL—100 splendid, vigorous stay white cockerels $5., $10., $15., $20. and $25. each. Pullets $3., $4. and $5. each. Some good utility cockerels $3. each.

FREE—Illustrated catalogue and mating list, giving full description of my matings for 1915.

Send one dime for the "Regal White Wyandotte Book," the information it contains will be worth dollars to you.

John S. Martin, Box D, Port Dover, Canada

THE KIND OF INCUBATOR YOU WANT.

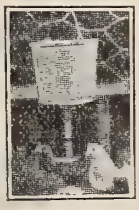
If you havn't any incubator, you are behind the times. In these days you must beat the hen to get profits. An incubator spells speed and efficiency; and in the race of competition, old mother hen is left behind. She is reliable, all right, but she is too slow.

Old hen doesn't get broody until May or June, and you want Winter hatches, if you are going to make money out of your poultry. A hen will hatch only about twelve chicks, but a good incubator will hatch anywhere from 85 per cent to 100 per cent of the fertile eggs you put into it.

The average poultryman doesn't need too large an incubator. A 150-egg size will do. For unless one has a large flock of chickens, it takes too long to save enough eggs for a big machine.

The Reliance Incubator will meet your ideal in results. The machine will also satisfy all your requirements and insure your success. This is the machine that has made record after record of big hatches—and the chicks hatched have been strong and healthy. It will pay you to write and find out more about the Reliance machines and the free offer. This concern is located at Freeport, Ill., and also manufacturers bargain Grain Sprouters and Brooders. Write for information and order blank on bona fide free proposition. Address: Reliance Incubator Co., Freeport, Ill., and mention this paper.

Here Is The Poultry Grain Feeder and Exerciser



that everybody can buy for 50 cts. Feeds as good as any $2.00 [illegible] on the market. Can be attached to any pail or bag in 10 minutes.

A FEW HOURS WITH MEN WHO RAISE CHICKENS

By F. D. SUTTON

A. C. HAWKINS' WIN IN THE BARRED ROCK ALLIES AT BOSTON DESERVES SPECIAL MENTION.

C. H. Latham, and Others Capture Big Prizes.

The writer has attended a great many poultry shows in his life, has bred and owned a large number of A No. 1 Barred Plymouth Rocks and has handled many more in the show room, but it was never our pleasure to handle a finer line of this popular breed than we did while at the great Boston Show. Here the most prominent and renowned Barred Rock breeders of the New England States were present in open competition, one with the other and while the prizes were quite equally distributed, the winning of A. C. Hawkins was an eye opener to every lover of Barred Rocks, who looked over Mr. Hawkins' birds at Boston.

It was one of the unusual pleasures of the writer, while at Boston, to handle many of Mr. Hawkins' birds and we were wonderfully impressed with the splendid, clean cut bearing on practically ever feather we examined on every specimen exhibitd by Mr. Hawkins at this show.

His 1st prize cockerel was certainly a jewel. No one disputed the honor acorded to him, while the 1st prize cock bird was preferred by some to the 1st prize cockerel. In our estimation it would be pretty hard to choose between the two, as the 1st prize cock bird was the sire of the 1st prize cockerel, and they were as near alike as two peas.

In the hen class, Mr. Hawkins won 1st and 2nd and we heard one of the most expert Barred Rock breeders of this country state that there was simply nothing to it, (so far as his birds were concerned) as Mr. Hawkins had the best pair of Barred Rock hens in the show room, and that they were well placed.

In the Barred Plymouth Rock pullet-bred cocks, Mr. Hawkins won 1st and 3rd, with the 2nd cock won by C. H. Lathan, (who also won 4th and 5th cocks in this class), close up to the 1st in the writers' estimation. Mr. Lathan's 1st and 2nd pullet-bred cockerels were both worthy of every honor accorded them, while his 1st and 2nd pullets were among the sensations of the show room.

The Grove Hill Poultry Yard's win of 3rd pullet was merited in every way, while the Pittsfield Poultry Farm broke into the winnings with 4th and 6th prize pullets and 6th cockerel. Nat. L. Divoll showed a beautiful pullet in the cockerel-bred class, which easily carried off 1st honors, while George J. Cinningham's pullet winning 2nd was greatly admired by everyone who saw

NIEMAN'S POULTRY FARM

H. A. Nieman & Co., Ransomville, N. Y.

SOME GOOD HOMESTEAD LAND OPEN YET.

Editor:—This is the first I have written to the Fancier. It has been so full of good things I did not see where I could say a word that would help. It has just occurred to me that some of your subscribers might be interested in knowing about southwest Nebraska and in the fact that there is still some homestead land in this vicinity well located in a good settled neighborhood where fine deeded land is worth from $15. to $40. an acre. The main crops in this country are corn, wheat and alfalfa. Corn yields up to 40 and 50 bu. an acre; not as much as some other places perhaps but the difference is made up to a great extent because our ground is not so weedy and a man can handle more acres with no more labor. We use two row machines a good deal out here. Wheat does well and some years a crop of 30 bu. an acre or better is raised. Alfalfa is cut three times a year and sometimes four. We raise lots of hogs and get better than Chicago price on our local market. We have no hog cholera.

This year there is more wheat sown than usual as the price is expected to range high for some time.

To make a success in this country a man will have to work and work hard to get started, but where is the country a man can make an honest living in without work?

If a man will come out here and take a good homestead of 160 acres, roll up his sleeves and go to work combining brains with what he does, he will come out all right.

There is no charge for this information and if any of your readers want to get a homestead, and I can give any assistance I will cheerfully answer all letters without charge if a stamp is enclosed. I will close, wishing you every success.

Walker Matterson,

Benkelman, (Dundy County), Neb

P. S. Poultry does fine and we have o high market as we ship all produce to Denver, Col.

Save 2/3 Fuel Cost With A Kerosene Burning Sandow

Investigate!

Without change of equipment, the Sandow runs on kerosene—gasoline—distillate—or alcohol.

On low priced kerosene, the Sandow delivers more power per h. p. of rating, than ordinary engines do on gasoline. With the Sandow you can save the price of your enigne in upkeep economy alone. Investigate! Get all the facts.

Write for Free Sandow Book, which shows you by illustrations from photographs why the Sandow is the simplest engine made—the easiest to run—the most free from trouble and repair expense.

Only 3 Moving Parts

Starts at 40 degrees below zero. Starts without cranking—runs in either direction—throttle governed—hopper and tank cooled—speed controlled while running—no cams—no valves—no gears—no sprockets—light weight—can easily be taken anywhere for work—complete ready to run.

THERE'S A SANDOW FOR EVERY FARM

Made in all sizes from 1½ H. P. to 18 H. P. Have a Sandow to meet your needs—do the work you want done at greatest economy. Sandow will do your pumping—run your feed grinders—your cream separators—do all the stationary power work of farm or shop, and save you more money than any other engine on the market. Sandow is not just an ordinary engine. Special design for kerosene fuel means more simplicity, greater durability. Send for Free Book and judge for yourself.

TEN YEAR IRON CLAD GUARANTY

Absolutely protects you—Sandow must make good on every claim. It is because Sandow is making good every day on thousands of farms that we can make this iron-clad, binding guaranty. Users everywhere will tell you how Sandow saves fuel—saves trouble—saves repairs—and can be depended on for power all the time.

FREE TRIAL ON YOUR FARM

Book gives our Free trial proposition. Use the Sandow every day 30 days on your own farm. If you don't say it is the most economical and most powerful farm engine you ever saw—if it does not satisfy you every way, send it back and we will refund every cent you paid for it.

SPECIAL LOW PRICE DIRECT TO YOU

Just compare these rock-bottom prives for Sandow Engine, with those of any other engine manufacturer, and remember Sandow quality is unsurpassed. Sandow prices are: 1½ H. P. Bull Pup Engine, $33.75; 2½ H. P. Sandow, $42.50; 4 H. P. Sandow, $65.00; 6 H. P. Sandow, $95.00; 8 H. P. Sandow, $140.00; 12 H. P. Sandow, $250.00; 18 H. P. Sandow, $385. We have no agents—no jobbers—no middlemen—no dealers. You buy of us and keep all the middle profits and commissions in your pocket. Before you get any engine, be sure to have our low figures and see what you can save.

SEND FOR FREE SANDOW BOOK

It is full of plain facts on the farm engine question—illustrated from cover to cover with pictures from photographs showing the simple construction of every part of the Sandow—contains the letters of users of the Sandow. Remember it costs you nothing to get the facts—does not place you under any obligation whatever. Write today. A postal brings the book. Address

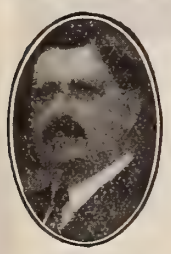
Save Half on a Standard Incubator



Chas. A. Cyphers
Principal.
Not connected with any other company.

THE BUFFALO

Best Standard Incubator at about Half the Standard Price.

You can't get a better Incubator than the Buffalo, no matter what you pay for it. The *"next best"* will cost you 40% more.

You know what an Incubator has to be when Chas. A. Cyphers puts his name on it. He designed the first Standard Hatcher, and has never offered poultry raisers anything but his best. One quality only. No "Frills," and no "Makeshifts" to waste your money on, but the very best Hatcher Science and Skill can produce.

Here are the right prices for perfect Incubators and Brooders. No one can sell you a real Hatcher for any less; no one can honestly charge you any more.

No. 0— 60-Egg, complete	$10.50
No. 1—120-Egg, complete	14.50
No. 2—240-Egg, complete	19.00
No. 3—360-Egg, complete	24.00
No. 4—Special Duck Hatcher	30.00
100-Chick Colony Brooder	14.00
100-Chick Handy Hover	8.00

Let us tell you how one Buffalo owner makes $2,000.00 yearly on two town lots!

How To Make Love

(NEW BOOK) Tells how to get acquainted. How to court a bashful girl; to woo a widow; to win an heiress; how to catch a rich bachelor; how to manage your beau to make him propose; how to make your girl or fellow love you; what to do before and after the wedding. Tells other things necessary for lovers to know. Sample copy by mail 10 cents. tf.

THE GOTHAM CO. 1161 BROADWAY, N. Y.

CHATTANOOGA SECURES BIG POULTRY MEETING.

The American Poultry Association will hold an educational institute in connection with the 1915 poultry show of the Chattanooga (Tennessee) Poultry Association, and will offer the grand prize of America, a gold medal, together with silver medals and diplomas, at the fowl exhibit in Chattanooga next December. The offering of the grand prize and other awards is a recognition of the poultry show in the Lookout City as being the representative show of the south, and will be an incentive to exhibitors throughout the country to send their birds to Chattanooga. The Chattanooga show has yearly been improving in proportions and quality, and with the recognition extended by the American association, it is anticipated that the event this year will be an exceedingly successful one. Chattanooga, scenically and historically, is one of the most interesting cities in the country to visit, and is well located, with excellent transportation facilities, for a large territory reaching well into the north and west. The names of civil war battles fought around Chattanooga, such as Chickamauga, Lookout Mountain and Missionary Ridge, suggest the historical interest attached to the place.

At the annual meeting of the Chattanooga Poultry Association, held in January, these officers were elected: President, O. B. Andrews; first vice president, D. S. Henry; second vice president, T. M. Marett; secretary-treasurer, F. C. Rose; assistant secretary, Wade H. Farrar; superintendent, W. A. Luther. The executive committee consists of T. R. Asa, H. L. Harbin, and H. M. Layman.

Heretofore the grand prize and other awards which Secretary S. T. Campbell of the American Poultry Association wrote would be offered at Chattanooga in 1915, have been conferred at the Chicago, Harrisburg, Boston, Madison Square Garden and other representative shows. The fact that they are to be offered at Chattanooga demonstrates the prestige that has been created there along the poultry line.

The Chattanooga organization has been invited by D. O. Lively, chief of the live stock department of the Panama-Pacific International Exposition, to send a carload of birds to be entered in the show which will be conducted there Nov. 18 to 28. The matter is being considered seriously.

REMOVAL NOTICE.

To All Interested, E. M. Mengel, formerly of Drehersville, Pa., has moved his poultry plant to New Ringgold, Pa. and he is in a better position to furnish stock and eggs of better quality. With his winnings of the 1914 season he has added another victory. In future address him as Mengels Poultry Yards, New Ringgold, Pa. Send for their mating list, it is free.

ROSE COMB ORPINGTON BREEDERS. NOTICE.

The National Rose Comb Orpington Club has issued their first annual Club Book. Every Rose Comb Breeder should not fail to secure a copy. If you are not a member, you are urged to join and help the breed along. Dues are $1.00 annually. Club Book free to members. Non-members can secure a copy by sending 15c to cover cost of mailing. For further particulars and information about Rose Comb Orpingtons, write to E. M. Mengels, Sec. New Ringgold, Pa.

The Martling Hennery, BOX 186 E, Ridgefield, New Jersey

A Few Hours With Men Who Raise Chickens

(Continued from page 55).

her. W. W. Carpenter's 2nd prize cockerel-bred hen comprised about all one could desire in a Barred Plymouth Rock female. Her shape was A No. 1, barring unusually good, head-poins the best. In our estimation she was properly placed.

A. C. Hawkins also carried away the 1st prize pen, (fowl); Lamberts Poultry Farm, 2nd and Grove Hill Poultry Yards 1st in the chick class, Pittsfield Poultry Farm 2nd in the chick class. C. H. Lathan made another good win in the pullet-bred pens by capturing 1st and 3rd prizes, the Pittsfield Farm being awarded 2nd prize in this class and 1st prize in the cockerel-bred pens.

We doubt if Boston will ever be able to show a finer class of Barred Plymouth Rocks in years to come and we desire to congratulate both the show management, as well as the exhibitors on the splendid line of birds shown in this class.

F. B. Williams.

Mr. F. B. Williams, the popular Proprietor of the West Mountain Poultry Yards, Naugatuck, Conn., one of New England State's most successful and widely known White Wyandotte breeders, has been making unusual history in the interest of this popular breed of birds.

Mr. Williams has been breeding White Wyandottes for nearly twenty years and for twelve years his birds have been winning constantly at the great New York City shows.

During the last White Wyandtotte Club Show, held at Harrisburg, Mr. Williams made twelve entries and every entry was placed under ribbons. Many of the largest breeders of the country were there and the class was made up of 269 birds, representing exhibitors from ten different states. In this wonderful competition Mr. Williams' birds won 2nd and 8th cocks in a class of thirty-eight; 4th and 8th hens in a class of thirty-six; 1st, 3rd, 6th and 7th cockerels in a class of forty-two and 3rd and 4th pullets in a class of forty-three; 3rd old pen in a class of eight and 4th young pen in a class of fourteen.

These winnings speak in stronger terms of praise than anything we might be able to say in their behalf. Mr. William's birds have also won many phenomenal prizes at Boston, Albany and other prominent shows. He has mated up sixteen pens from which he is offering eggs for sale at a very reasonable price, quality considered.

The prices of eggs from pens one, two, three and four are $3 per setting, $10 per 50 and $20 per 100, and from his twelve best pens, $6 per setting or $35 per hundred. Mr. Williams also has what he calls a utility flock of White Wyandottes from which he sells incubator eggs at $1.50 per 13 or $85 per thousand. Every breeder tested by Storrs Agriculturlal College for White Diarrhoea.

A strong percentage of fertility is guaranteed with every sale. Mr. Williams also sells baby chicks and guarantees safe arrival to all customers.

We trust that our readers will look up Mr. William's ad in this issue of the Fancier and write him for price-list for the season of 1915.

A. R. BRYANT.

Mr. A. R. Bryant, of Aldan, Delaware County, this state, is one of our most dependable and conscientious Single Comb Rhode Island Red breeders.

We have just received his record of show winnings and price-list on exhibition and utility eggs, which contains very attractvie reading and offers that are sure to take with onyone who is looking for high-class eggs at reasonable prices.

Mr. Bryant's matings of last year produced a large percentage of high-class show birds that made a splendid record both in his own hands and in the hands of his customers.

We believe it would be wise for any of our readers who are interested in S. C. R. I. Reds to write Mr. Bryant for his price-list before placing their order for eggs. Mr. Bryant sells baby chicks from his utility pens at $17 per hundred. Kindly mention the Fancier when writing, please.

MRS. GRACE BARBER.

We have just received a letter from one of our subscribers, Mrs. Grace Barber, of 33 Lion St., Batavia, N. Y. concerning the merits of her White Leghorns and Columbian Wyandottes. Mrs. Barber has 7 Columbian Wyandottes whcih laid forty-six eggs in two weeks and ten White Leghorns which laid fifty-nine eggs in two weeks. This is certainly a splendid record and Mrs. Barber has every reason to be proud of the utility quality of her birds.

DUOFORM

Country Salesmen Wanted

You don't have to be experienced. We will teach farmers, mechanics and hustlers, willing to do pleasant work, how to make

$1,000 to $3,000 a year

Here is a great chance to become your own boss. Every farmer and small town resident becomes your steady, profitable customer for our quick-selling goods. We supply the capital, credit, and give exclusive territory. Write for our Plan if you want to make money. State age.

THE DUOFORM CO., Dept. 34, North Java, N.Y.

Make Young Chicks Husky and Strong

Get them started right—that's half the battle. Conkey's Poultry Tonic is good for your chicks because it regulates the sensitive organs and tones up the system. No filler, no cayenne pepper or any other ingredient that can hurt the chicks—all pure medicine in

Conkey's POULTRY TONIC

That's why it gives them health and stamina, and makes them grow. You cannot afford to be without it. Get a package, 25c., 50c. and $1.00, or a Pail, $1 60 and $3 00. Feed it to all your birds all the time.

Conkey's White Diarrhea Remedy

will help you to overcome White Diarrhea and indigestion. Don't let these diseases carry off your chicks. Give them Conkey's White Diarrhea Remedy in the drinking water from the start, until they are 3 weeks old. Packages, 25c. and 50c.

You should have a "CONKEY CORNER" in your poultry house. Then you will have the right tonics or remedies always on hand. Tell your dealer you want CONKEY'S, or write us if no Conkey dealer is nearby.

Conkey's Starting Food

is a wonderful aid in starting the chicks right. It has just the food elements they need. Feed it to every brood you hatch.

Conkey's Poultry Book tells you all about the care of your chicks and older birds. Worth dollars to any poultry owner. Send 10c in stamps, and we will mail you the book and also our cash value coupon.

THE G. E. CONKEY CO.
1007 Conkey Bldg., Cleveland, O.

Noftzger's Partridge Plymouth Rocks
(The Originator)

Hundreds of grand young stock for sale. Well developed at $2 and up. Cockerels and Pullets. Every one of which is bred from my line breed, pedigreed prize winners. Our Partridge Rocks have always held their own in competition with America's best.
High class show birds in Cocks, Hens, Cockerels and Pullets at reasonable prices.

S. A. NOFTZGER, **North Manchester, Ind.**

BUFFALO INCUBATOR COMPANY.

It affords us a large degree of pleasure to call the attention of our readers to the advertisement of the Buffalo Inc. Co., Charles A. Cyphers, Pres., in this issue of the Fancier. Mr. Cyphers began advertising with the Fancier at the beginning of this year and the wonderful claims he has been making for the "Buffalo", as a high-class hatcher, has been verified by a large number of communications which we have received from Mr. Cypher's customers.

We have visited a number of poultry plants during the past two or three years, where the "Buffalo" has been used in competition with other high-class incubators, and it has always proven to be a first-class hatcher in every instance.

At the price Mr. Cyphers is selling the "Buffalo", this machine should certainly prove very popular among the readers of the Fancier. Everybody who knows Charles Cyphers is fully acquainted with the fact that he is always ambitious to give the highest possible value to everyone of his customers for the money which they send him, and we have never yet heard a complaint from anyone of our friends, with regard to the treatment accorded them by Charles A. Cyphers.

Better write the Buffalo Incubator Company at once for their 1915 catalogue and price-list. It is free for the asking. Address Buffalo Inc. Co., 15 Bradley St., Buffalo, N. Y.

JACQUELIN FARM.

Cortland H. Smith, Proprietor of the Jacquelin Farm, Warrenton, Va., has certainly made a wonderful record during this show season with his Dark Cornish Fowls. In every show in which Mr. Smith has exhibited his Cornish, they have made phenominal winnings in very strong competition.

Mr. Smith has been breeding Dark Cornish continuously for nearly twenty-five years and during all this time, his birds have won a large number of the most coveted prizes in the leading shows of the country.

Mr. Smith is offering hatching eggs, utility and fancy stock at very reasonable prices. We would advise any of our friends, who are looking for first-class Dark Cornish, to write Mr. Smith for his mating and price list. Always address Jacquelin Farms, Cortland H. Smith, Prop. Will you be kind enough to mention the Fancier when writing.

MAGENTA POULTRY FARM.

F. E. Woodard, Proprietor of the Magenta Poutlry Farm, East Longmeadow, Mass., has just published a very interesting and complete mating list of his Rose and Single Comb Rhode Island Reds for this season. Mr. Woodard's winnings from 1912 to 1914, at Springfield, Mass. have certainly been commendable, while his winnings in other shows in that state have attracted wide attention from other Rhode Island Red breeders.

Mr. Woodard has mated up nine pens this season and is offering eggs at from $3 to $5 per setting. If our readers are looking for splendid quality at reasonable prices, we believe they would make no mistake by giving Mr. Woodard a portion of their orders.

J. H. CROSSLEY & SON.

Mr. J. H. Crossley & Son, of Magnolia, N. J., among the "Skeeter" state's most prominent and successful breeders of Single Comb Rhode Island Reds have just sent to the Fancier's office an unusually attractive 1915 mating and price-list of their winning and utility Single Comb Reds. It is one of the neatest booklets that we have ever read and is gotten up along very artistic lines. It is beautifully illustrated with Mr. Crossley's winning males and females at some of the leading shows, including Philadelphia, at which show Mr. Crossley won an unusual victory, carrying off 3rd cock, in a very strong class, 2nd cockerel, 2nd pullet, 3rd and 4th pens, special for best display. At Mt. Holly, Mr. Crossley's birds won 1st cockerel, 2nd and 3rd pullets. Everyone who visited either of the above named shows will recognize the importance of these winnings on account of the unusual quality of the Reds displayed there.

Mr. Crossley advises us that he will sell eggs from his best pen, known as special mating A and B at $10 per 15, from pens known as No. 1 and 2 at $5 per 15 and from three four, five and six at $2 per 15. Satisfaction is guaranteed to every customer.

Mr. Crossley will supply a limited number of Baby Chicks, ranging in price from 50c to $1.00 each from his prize matings and from $6 for 25 to $18 per 100 from his cheaper pens, or pens number three, four, five and six.

Be sure to write your wants and state definitely what pens you desire eggs from or the nature of breeding or exhibition birds you desire to purchase. Mr. Crossley will give you full value on every order he receives and if stock, which costs over $5 each, is not satisfactory and the bird or birds are returned within two days from the date they are received, Mr. Crossley will refund your money, less the express charges. Write him today and tell him you saw this article in the Poultry Fancier.

DR. L. E. HEASLEY.

There are very few Single Comb Buff Leghorn breeders, whose records in the Show Room, and from a utility standpoint, as well, can equal the record made by the Single Comb Buff Leghorns as bred by Dr. L. E. Heasley, of Holland, Michigan.

At the Grand Rapids, Michigan Show, the Doctor's birds won 1st, 2nd, 3rd, 4th and 5th cocks; 1st, 2nd, 3rd, 4th and 5th cockerels; 1st, 2nd. 3rd and 4th hens; 1st, 2nd, 3rd and 4th pullets;

ATTENTION!
Campine Breeders

Breeders and admirers of the Campine fowl will welcome the news that the Reliable Poultry Journal Co.'s new Campine Book is now ready for distribution.

Not in many years has there been added to Poutry Literature a work which so holds the reader's interest, or which is so full of genuinely usuable information upon the beginnings and progress—the matings and rearing—of the breed of which it treats.

This book should be in the hands of every fancier and breeder of Campines, as well as every poultry judge. The articles from the pens of Rev. E. Lewis Jones and Louis Vandersnickt give a new insight into the history and care of Campines. The illustrated articles on Campine type by Artists F. L. Sewell and Arthur O. Schilling make plain to the merest novice the requirements for the improved Campine, while the leading breeders of the present have contributed articles of lasting worth and interest.

The book has been ably edited by F. L. Platt, one of the acknowledged world's authorities on Campines. Mr. Platt has himself also contributed articles on Campine History and Progress and upon the characteristics of the present-day ideals.

Not least of the book's attractiveness and value are the many photographic portraits of Campine fowls, anl a beautiful colored painting by F. L. Sewell, showing pairs of both the Silver and Golden varieties.

Price of "The Campines," 75 cents a copy, or $1.00 with a year's subscription to the Poultry Fancier. Address all orders to

Sample of
Bourbon Poultry Cure

Enough to cure two hundred chicks of gapes. Also poultry book on "Diseases of Fowls and How to Treat Them." Both sent Free upon receipt of 10 cts. to help pay for postage and packing. Write today for this free medicine and book.

BOURBON REMEDY COMPANY
349 E. MAIN ST. LEXINGTON, KY.

1st, 2nd, 3rd and 5th pens; all shape and color specials; special for best male in the show room; cup for best pen in the show; cup for best display of pens, all breeds competing; cup for best Leghorn pen, making the third time this prize was won by the Doctor's birds.

In the Mountain Grove, Missouri, Egg-Laying Contest, the Doctor's Buff Leghorns out-layed all Single Comb White Leghorns, Campines, White Rocks, Rose Comb Reds, Buff Wyandottes, Black Orpingtons, Single and Rose Comb Black Minorcas and Black Langshans. The Doctor also won the highest record Buff Leghorn hen. The same hen was a prize winner in the Missouri Poultry Show.

At Stores, Conn. Agricultural College, the Doctor's birds won the highest American Pen for the month of May, second highest bird average for the first six months, record 211 eggs in 9½ months; 230 eggs in 11½ months.

Better write for the Doctor's mating and price-list. It is free and it will interest the Doctor to know that you saw the mention of his victories in the Fancier.

WHITE WYANDOTTES AHEAD IN GREAT EGG LAYING CONTEST AT THE PANAMA-PACIFIC INTERNATIONAL EXPOSITION.

San Francisco, Feb. 11, 1915—The egg laying contest in which select fowls of different varieties from widely separated points started last November and from indications the experts, in charge of this department of the live stock show of the Panama-Pacific International Exposition declare that new records will be established.

The contest which has been in progress for the past two months is yet too new for the determination of any of these problems or for even an index to the possible outcome, but the fowls are in excellent condition and are increasing their production rapidly.

The fowls in competition are of high show-yard quality and of sufficient class to enter in competition for the premiums of the poultry show.

Ten fowls are placed in each pen in the egg laying contest. The winning pen for the past month was No. 25 the White Wyandottes, entered by George D. Adams of Victoria, B. C., with a total of 127 eggs; No. 32, White Wyandottes, entered by Tom Barron, Catforth, England, with a total of 121 eggs, second.

The winning pen in S. C. White Leghorns for the month is No. 50, entered by the Clover Leaf Farm, Lodi, California, with a total of 106 eggs. The winning pen of Rhode Island Reds is 109 owned by Mrs. W. B. Haywards, California, with a total of 28 eggs. The winning pen of Barred Plymouth Rocks is No. 13, entered by Oregon Agricultural College, with a total of 67 eggs.

E. E. RICHARDS, CANDIDATE FOR PRESIDENT OF A. P. A.

It is certainly a great pleasure to us to announce in the columns of this Journal that Mr. E. E. Richards, publisher of the Western Poultry Journal, Cedar Rapids, Iowa, has announced his candidacy for the office of President of the American Poultry Association.

There is no question but that Mr. Richards would fill this office to the entire satisfaction of everyone interested in the welfare of the Association.

Mr. Richards has been helping along many lines to promote the poultry industry for the past twenty-six years. He has been a member of the American Poultry Association since 1900, and he has been an elective member of the executive board for two consecutive terms and has served on the committee of "Grievances and Welfare" for five years, four years of which he was chairman of this committee. We know of no one before the poultry public today who, in our personal opinion, will make a better President of the American Poultry Association than Mr. Richards. His long association with the poultry industry and his active work and wide experience as a poultry publisher, together with his experience as a member of the executive board and the information he has gathered as a member of the committee of "Grievances and welfare" will prove unusually valuable to Mr. Richards if elected to the office of President of the A. P. A.

Don't Watch!

but equip your home and Poultry Houses with a Burglar Alarm. Ours is simple in construction, but most efficient in service. Send 35c for one, $3.00 per doz.

Gustar Werner, Distributor
OLNEY, PHILADELPHIA, PENNA.

The *hatching period*, with its attendant losses from bowel troubles, is soon here. Prepare for it—see it successfully through with ***Charc-Oil***, the medicated charcoal which regulates digestion, corrects intestinal gases, heals, soothes. With it you can save your young chicks, keep the youngsters growing and vigorous, and the old birds in perfect condition through all seasons.

XXX Grade (fine granulated) for baby chicks.
XX Grade (medium) for half grown chicks
X Grade (coarse) for adult fowls.

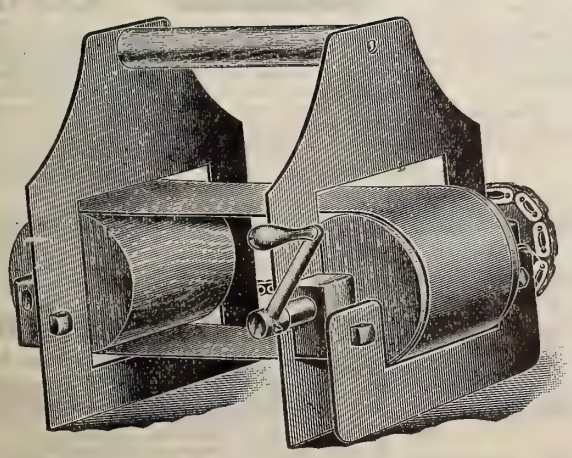
Charc-Oil

Both prevents and cures White Diarrhœa, Indigestion, Constipation, etc. Regulates *all* digestive functions. Nothing like it. It's a

Medicated Charcoal

Everybody knows the corrective properties of charcoal. But *Charc-Oil* is better—it's pure hardwood charcoal *medicated* with antiseptic soothing oils. Packed in 10-lb. fibre pails, $1.50. 25-lb. drums, $2.50—express paid if not over 50c. Send for it—don't delay—every hour counts at this period. Either direct or at your dealer's.

KING REMEDY CO., 21 Elm Street, Rochester, N. Y.



The Aetna Safty Appliance & Hardware Co.,

of Unionville, Conn. are putting on the market this new sanitary automatic flexable poultry roost. With a few turns of the crank the board is cleaned. It is one of the long felt wants of puoltrymen, and as the frame is manufactured of steel it makes it absolutely sanitary. The running board is manufactured of water proof canvas and warranted for 20 years.

It is manufactured in lengths to suit the customer, and prices are such that no one can afford to be without it. We want agents in every state and will sell state rights. We also manufacture a folding steel frame roost which can be attached with the regular removable board. Send for circular and terms.

25c Worth of China Eggs FOR 10c WHY?

The best way for us to get you to know something about this new Hammock Egg Carrier, is to have you see it. That's why we ask you to send a dime for 25c. worth of china eggs. If we simply offer to send a package free, then a lot of idle, non-interested people would ask for one. But, the china eggs (according to our inquiry at a big store) cost about 2c. each. To deliver a dozen of them to you in a sample egg-carrier costs several cents. So you see, altogether, you are getting, for one dime, something which is worth 25 or 35c.

Even at that—unless you are seeking a more profiable way to sell your eggs or a safer way to ship your eggs, please do not mail us the below coupon or the dime. We want to receive dimes only from those who can, and, possibly, may buy our wonderful new equipment, providnig they find it will make money for them. If you are business-like to that extent, mail this coupon to-day—it will obligate you in no way whatsoever.

Hammock Egg-Carrier Company

628 Ellicott Sq., Buffalo, N. Y.

CLIP ALONG HERE

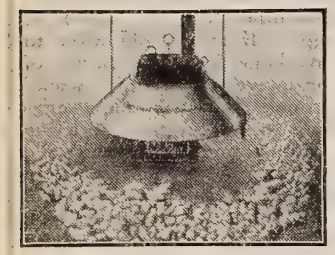
THE HILL SELF-FEEDING, SELF-REGULATING, COAL-BURNING COLONY BROODER



Will Raise Your Chicks Better Than a Hen.

It is the only brooder equipped with safety magazine which absolutely prevents any gas from escaping in the house, and at the same time automatically feeds the fire, making it possible to maintain an even temperature of pure, warm air under all conditions which is positively necessary to successful brooding. It is fitted with Ransom Duplex Grate, the greatest grate known. The brooder is perfect in operation, simple in construction, will last a lifetime and fully guaranteed.

Send for circular and price list of the brooder that solves the brooding problem.

Address, Mercer Poultry Farm, Trenton, N. J.

EGGS AND CHICKS

FROM

Laurelton Layers

from the great utility farm of the East, supplying thousands of strictly fresh eggs per day on a 12 hour delivery. To make sure of getting our strong, healthy baby chicks, and fertile hatching eggs in any quantity, and promptly, order now. We have thousands of select S. C. White Leghorn yearling hens—winners, bred for size, vigor, early maturity and heavy egg production. But they will soon be taxed to the utmost to supply our hatching egg trade and fill our 48,000-egg incubators for bringing off hatches twice a week. So order now. Prices as follows, special discounts being allowed for chicks taken at the farms:

	No. Chicks	March	April	May
Chicks.....	50	$10.00	$9.00	$7.00
Chicks.....	100	18.00	15.00	12.00
Chicks.....	1,000	150.00	140.00	120.00

Full Count and Safe Delivery Guaranteed.

EGGS FOR HATCHING: $8.00 per 100, $70.00 per 1,000. 85 per cent Fertility guaranteed. Write for complete price list.

Box E, Lakewood, N. J.

NOTICE.

We have just received word at our office from Dr. J. S. Rittenhouse, Lorane, Pa. that when his shipment of Columbian Wyandottes were received from Madison Square Garden Show, he was shy one Columbian Wyandotte hen, leg band No. 71, and one Columbian Wyandotte Pullet, leg band No. 23. The Doctor will appreciate the courtesy, if whoever received these birds, will be kind enough to advise him concerning the same.

Keystone Poultry Foods

contain that "something" which has been lacking in your rations. For thrifty birds of all ages—sturdy chicks, quickly maturing pullets, heavily laying hens, alert, vigorous cocks—there are no feeds more sure of results. They contain proper food ingredients, pure, wholesome and clean—properly proportioned and mixed by men who know. Their high quality, constantly maintained, has made them

The Keystone of Success

Used year after year by poultry authorities. Dependable always. Exactly as represented.

WHITE WYANDOTTES---Mountain Strain

Winners at N. Y. for 12 Successive Years

and every large show from Canada to Texas. Eggs from 12 matings not excelled, if equalled, in America, at the lowest prices ever heard of for top notch quality.

All breeders tested by State Agricultural College for white diarrhea, which insures better hatches and the livability of the chicks. Send for mating list of exhibition and utility matings. 400 breeders. Eventually why not now.

West Mt. Poultry Yards, BOX B, Naugatuck, Conn.

F. B. Williams, Prop.

Single Comb Rhode Island Reds

TESTED, TRIED AND TRUE WINNERS

At the great Baltimore 1914 show on 19 birds entered, 17 were placed and won special for best display. Also winners at Philadelphia and Hagerstown. 1915 matings cannot help but produce a large percentage of prize winners. Eggs, $2.00, $3.00 and $5.00 per setting. Large lots a matter of correspondence. Stock for sale at reasonable prices. Fertility and satisfaction guaranteed.

GEO. W. WHITE, -:- HAMILTON, MD.

Aldrich White Orpingtons

At the Great MADISON SQUARE GARDEN SHOW, Feb. 12-15th, 1915, on five entries in the single classes, we won FIRST COCKEREL and FIRST AND THIRD COCKS in the strongest class of White Orpingtons ever exhibited there.

Win at National Laying Contest

At the National Laying Contest at Mountain Grove, Mo., ALDRICH WHITE ORPINGTONS were again victorious in February. In competition with 75 pens, a pen of Aldrich White Orpingtons laid 113 eggs for February, being first for that month. One of the pullets in this pen has laid 83 eggs for the four months since Nov. 1st, being the most eggs laid by any bird in the whole contest during this time. This is ample proof that ALDRICH STRAIN WHITE ORPINGTONS ARE THE BEST WINTER LAYERS AS WELL AS THE BEST EXHIBITION FOWLS.

If you wish stock or eggs for either exhibition or utility, send for our catalogue, and let us quote you prices.

ALDRICH POULTRY FARM,
7068 N. High St., Columbus, O.

Crossley's Reds

Winners at Phila. for years, also Hagerstown, Camden, etc. At Phila., 1914, 5 prizes on 7 entries including best display in Single Combs. Eggs at $2, $5 and $10 per 15. Chicks from best mating at 50c and $1.00 each and $18.00 per 100.

J. H. CROSSLEY & SON

BOX 777. Magnolia, N. J.

CERTIFIED LAYERS

America's Greatest Trap Nested Strain

S. C. Buff Orpingtons

Our 229 Egg Record is official. We lead in America's largest Egg Laying Contests.

Our SHOW Record needs no explanations as our wins at Allentown, N. Y. State Fair, Trenton, etc. speak for quality.

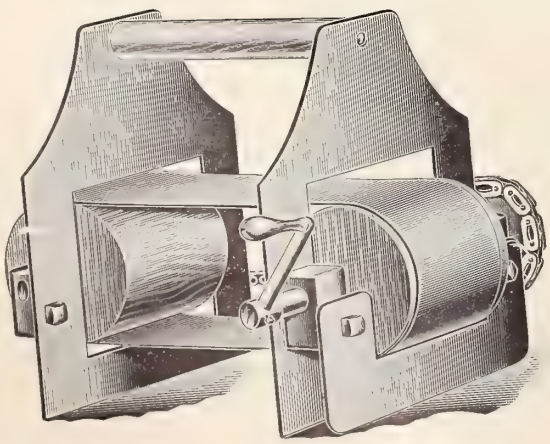
HATCHING EGGS which will prove a splendid investment at reasonable prices with breeders being trap nested.

(We guarantee **75** percent fertility and replace without extra charge)

Place your order NOW many Winners and Record Layers have been hatched in April.

OLD FORGE POULTRY FARM

Spring Grove, Pa.



The Aetna Safty Appliance & Hardware Co.,

of Unionville, Conn. are putting on the market this new sanitary automatic flexable poultry roost. With a few turns of the crank the board is cleaned. It is one of the long felt wants of puoltrymen, and as the frame is manufactured of steel it makes it absolutely sanitary. The running board is manufactured of water proof canvas and warranted for 20 years.

It is manufactured in lengths to suit the customer, and prices are such that no one can afford to be without it. We want agents in every state and will sell state rights. We also manufacture a folding steel frame roost which can be attached with the regular removable board. Send for circular and terms.

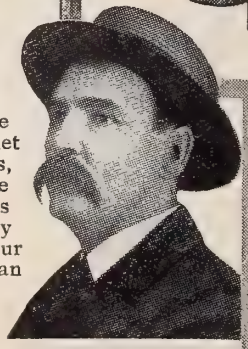
Let Us Tell You
What We Have Found Out About Chickens

H. H. Johnson *Mrs. M. M. Johns.*



WE HAVE raised chickens ourselves and lived comfortably and saved money on a poultry income—and we have started 580,000 other people raising chickens for profits. Now, we want to lay the same profit-making plans before you. Will you let us do it? What we have found out about chickens, we have written into the Old Trusty book which we want to send you free. If you will read a few chapters in it, we believe that you too will go in for poultry profits on a big profit making scale. Send us your name today for the book and see how easily you can increase your profits with our help.

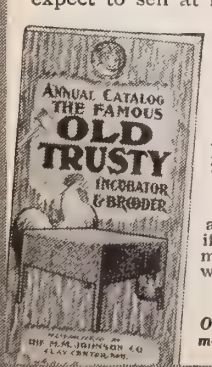
Old Trusty

M. M. Johnson
Inventor of Old Trusty

The Big Profit Maker for Poultry Raisers

Big Production—Low Price

Last year we made and sold about 80,000 Old Trustys. This year expect to sell at least 100,000. We have our big factory ready for that output. Also we have our prices fixed to make quick sales. Because of this enormous output, we are enabled to give the Old Trusty for from $3 to $5 less than any other factory would have to ask. And that for the finest incubator that can be built. The big difference in its construction makes the big difference in your profits. That's why there are more Old Trustys used than any 3 or 4 other incubators put together.



Mail a Postal Today for the Old Trusty Book

and read a few chapters on raising chickens for profits—then see if you cannot apply our suggestions in a way that means more money from chickens than you ever made before. Just a postal will do if you will please mail it today to

M. M. JOHNSON CO., Clay Center, Neb.

Old Trusty is sold less than $10, freight paid to any point East of the Rockies—a trifle more to points farther West. 30 to 90 days' trial—10 year guarantee. Catalog free

RHODE ISLAND REDS

How to Breed and Judge Them

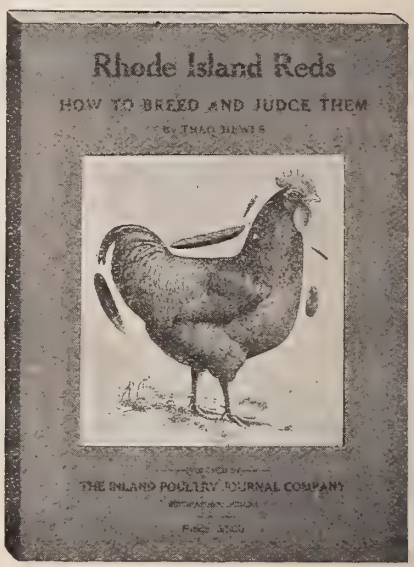
By THEO. HEWES

IS THE BEST AND MOST COMPLETE TREATISE EVER PUBLISHED ON THIS POPULAR BREED

There are but few breeds so widely advertised to-day as the Rhode Island Reds and no breed in which there is such a wide difference of opinion as to what constitutes perfection.

"RHODE ISLAND REDS; HOW TO BREED AND JUDGE THEM" IS BETTER THAN THE "STANDARD OF PERFECTION"

because it goes into detail and describes every section, with numerous illustration, showing ideal and defective shape and color, thus making scoring so simple that any one can understand. Some sections have four or five illustrations showing the several defects that may be found in them, with the proper discount for the same as applied by our leading Judges.



Size of Book 11½x8½ inches. Contains over 50 pages, including cover which is printed in three colors, and all on good half-tone paper. - PRICE, $1.00

In addition to this most complete series of articles on scoring, there are numerous articles from America's foremost Red breeders on every phase of Red breeding. This book tells you just what you want to know. **It tells you how to mate your pens; how to grow your chicks; how to select your show birds; in fact, it tells you how to grow, exhibit, and make money out of Reds.**

This book is sold on approval. The price is $1.00. **If you are not satisfied with your bargain, send us back the book and we will refund your money.**

SPECIAL OFFER:

A copy of this great book and a year's subscription to this Poultry Journal, both for $1.25. DO IT NOW and be up-to-date.

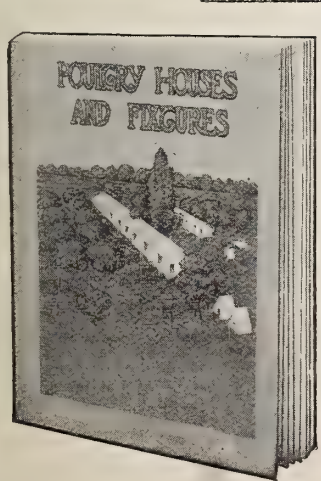
Poultry Houses and Fixtures

SEVENTH EDITION. REVISED AND ENLARGED. DOWN-TO-DATE.

STANDARD WORK ON POULTRY HOUSE CONSTRUCTION

James E. Rice, Professor of Poultry Husbandry, Cornell University, Ithaca, N. Y., states: " 'Poultry Houses and Fixtures' is the best work yet written on the subject. I shall recommend it to our students as a text book on the subject of poultry houses."

COMPLETE PLANS FOR PRACTICAL BUILDINGS AND EDQUIPMENT.



Building a Poultry House: Facts to be Considered by the Poultryman Before Construction. The Influence of Location, Soil and Climate. Full Details of Construction.

Closed Front Houses: A Five-Pen Laying House. House for Laying Hens, Poultry House with Hallway. Double Poultry House. House for City Lot. Cheap House for Small Flock. Continuous Brooding and Laying House. Bills of Materials and Interior Equipment for these Houses.

Scratching Shed Houses: Poultry House and Scratching Shed. House for Southern Breeders. Scratching Shed Colony House. Roosting Room and scratching Shed. A Tennessee Poultry House. Maine Experiment Station Curtain Front House. Maryland Curtain Front House. Cloth Filled Frames in Place of Glass Windows.

Open-Front Fresh-Air Poultry Houses: Tolman 20th Century Fresh-Air House. California Poultry House. Fresh-Air House for Cold Climate. Open-Front House for City lot.

Portable Poultry Houses: Sled Runner Colony House. Type of Movable House Used in England.

Exterior Fixtures: Portable Coop at Low Cost. A Good Roost Coop. Piano Box Weaning Coop. Shed for Weaned Chicks. Dry Goods Box Coop. Brood Coops. Crate for Shipping Day-Old Chicks.

Interior Fixtures: Successful Automatic Feeder. Coops for Breaking Up Broody Hens. Nest Boxes. Practical Feeding Troughs. Grit Box. Safety Trough for Chicks. Drinking Fountain for Chicks. Government White Wash, Etc.

THIS BOOK CONTAINS OVER 150 ILLUSTRATIONS.

Unquestionably the most instructive and comprehensive work on the construction of poultry houses and appliances that has been compiled to date. Every house and fixture described in this book is in use on the plant of a successful poultryman; is simple, labor-saving and reasonable in cost.

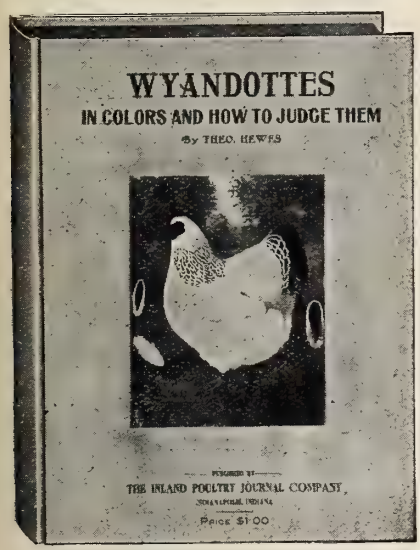
Standard Wyandottes in Colors and How to Judge Them

By THEO. HEWES

REACHES THE CLIMAX FOR THOSE INTERESTED IN THIS VARIETY. WHEN YOU SEE IT YOU WILL ACKNOWLEGE THAT IT IS THE BEST AND WORTH MANY TIMES THE PRICE TO YOU.

This book teaches you **How to Score and Judge** the greatest of all the American varieties. No other work published will give the information as it is given by Theo. Hewes in his articles, which are fully illustrated by over one hundred pictures, together with the chart system, of which he is the originator, and which is copyrighted by him. Not only do full page half-tone plates of some of the finest living specimens of these breeds appear in **black and white,** but the **richest and grandest work ever done in oil by an artist is given by I. W. Burgess in a series of twelve pictures representing male and female, accompanied by feathers from the different sections of the birds in colors.**



Size of book 11½x8½ inches. Contains over 70 pages, including cover, which is printed in three colors, and all on good half-tone paper. - PRICE, $1.00

These pictures are 4½x7 inches in size, and cost over $1,000 for the copper plates alone, to say nothing of the artist's labor and general cost of production. In fact no expense has been spared to make it by far the most valuable work on Wyandottes ever printed in America or elsewhere you cannot duplicate it at any price, but you can have one by return mail for $1.00, and if you are not satisfied we will refund your money. We do as we say we will, now and always. Our past dealings with the public will prove this.

Remit by Express, P. O. Order or Check as this is the safest way. Book will be sent immediately upon receipt of order.

XXX Grade (fine granulated) for baby chicks.
XX Grade (medium) for half grown chicks
X Grade (coarse) for adult fowls.

The *hatching period,* with its attendant losses from bowel troubles, is soon here. Prepare for it—see it successfully through with ***Charc-Oil,*** the medicated charcoal which regulates digestion, corrects intestinal gases, heals, soothes. With it you can save your young chicks, keep the youngsters growing and vigorous, and the old birds in perfect condition through all seasons.

Charc-Oil

Both prevents and cures White Diarrhœa, Indigestion, Constipation, etc. Regulates *all* digestive functions. Nothing like it. It's a

Medicated Charcoal

Everybody knows the corrective properties of charcoal. But *Charc-Oil* is better—it's pure hardwood charcoal *medicated* with antiseptic soothing oils. Packed in 10-lb. fibre pails, $1.50. 25-lb. drums, $2.50—express paid if not over 50c. Send for it—don't delay—every hour counts at this period. Either direct or at your dealer's.

KING REMEDY CO., 21 Elm Street, Rochester, N. Y.

Make Young Chicks Husky and Strong

Get them started right—that's half the battle. Conkey's Poultry Tonic is good for your chicks because it regulates the sensitive organs and tones up the system. No filler, no cayenne pepper or any other ingredient that can hurt the chicks—all pure medicine in

Conkey's POULTRY TONIC

That's why it gives them health and stamina, and makes them grow. You cannot afford to be without it. Get a package, 25c., 50c. and $1 00, or a Pail, $1 60 and $3 00. Feed it to all your birds all the time.

Conkey's White Diarrhea Remedy

will help you to overcome White Diarrhea and indigestion. Don't let these diseases carry off your chicks. Give them Conkey's White Diarrhea Remedy in the drinking water from the start, until they are 3 weeks old. Packages, 25c. and 50c.

You should have a "CONKEY CORNER" in your poultry house. Then you will have the right tonics or remedies always on hand. Tell your dealer you want CONKEY'S, or write us if no Conkey dealer is nearby.

Conkey's Starting Food

Is a wonderful aid in starting the chicks right. It has just the food elements they need. Feed it to every brood you hatch.

Conkey's Poultry Book tells you all about the care of your chicks and older birds. Worth dollars to any poultry owner. Send 10c in stamps, and we will mail you the book and also our cash value coupon.

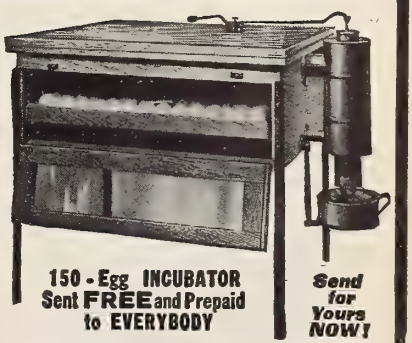
1007 Conkey Bldg., Cleveland, O.

FREE

This 150-Egg RELIANCE Incubator



Get yours now! *Don't wait!* Write at once. Be the first in your neighborhood to get an early hatch. Incubator is *FREE!* Costs you nothing—all you have to buy are the eggs.

Think of it! A 150-Egg Size Incubator delivered to you free. To get a big hatch all you have to buy are the eggs and a little oil for the lamp. In addition to the incubator

Everything Else Free

that belongs to the Incubator.

This includes Egg Tester, Lamp, Wicks, Regulator, Thermometer, Egg Trays, Etc.

Nothing like this has ever been done before. We are the first to give away a **real incubator.** Read how it is made. **You can't beat it for $20.00.**

The FREE Incubator

is made of best lumber throughout. Side wall and top are of three thicknesses. Cold can't get in, heat can't get out. Equipment all the **best** and **free.** Beautifully finished in mahogany—handsome, firm, steel legs.

Don't hesitate. There's one of these famous machines waiting here for you. You can get one easy—**free**—without work, without selling anything. This is not an agent's proposition. It's the best proposition ever put before you.

Send for **freight prepaid** shipping blank, instructions, and other information. Write name and postoffice plainly. Address

RELIANCE INCUBATOR COMPANY, Dept. 60, FREEPORT, ILL.

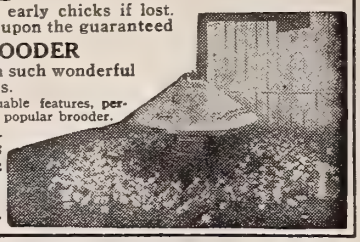
You *Must* Get a "*Sure-Thing*" Brooder Now

It's too late to experiment. No time to replace those early chicks if lost. *Why not be sure of raising them all?* You can depend upon the guaranteed

NEWTOWN GIANT COLONY BROODER

the original coal-burning colony brooder which has given such wonderful results in all parts of the country and under all conditions.

The Newtown will not disappoint you. Its many exclusive and valuable features, perfected through long experience, have made it the most satisfactory and popular brooder.



Coal-burning; self-feeding; self-regulating; fully ventilated; portable; strongly-built; free from fire danger; simple and economical in operation; does its work.

Better write for brooder booklet now. Mailed FREE.

Newtown Giant Incubator Corp'n. 29 Warsaw St., Harrisonburg, Va.

$7.50 for a Genuine "BUCKEYE"

100% Hatch Incubator

anywhere east of the Rockies and north of Texas. A little higher in the west on account of freight rates. Not a toy nor experiment, but a genuine 60-egg scientific hatcher. Six sizes up to 600 eggs at proportionate prices. The incubator that gives you only 60% to 70% hatches is an egg waster. The "BUCKEYE" gets a chick from every hatchable egg. Nearly half a million in successful operation and sold by 1100 dealers.

Guaranteed to Hatch Every Hatchable Egg

Makes no difference what they TELL you, 70 per cent is NOT a good hatch. You get 100 per cent with the "BUCKEYE" every time, whether you understand chickens or not.

Prove this at our risk. Try the "BUCKEYE" 40 days. If you don't get a chick from every hatchable egg, send it back at our expense. We make this unusual guarantee to prove that the "BUCKEYE" is in a class by itself and should not be compared with 70 per cent hatchers.

MAKING MONEY the BUCKEYE WAY

Free Book: "Making Money the Buckeye Way." Of great value to poultry raisers. Sent free with catalog and name of dealer. Write today.

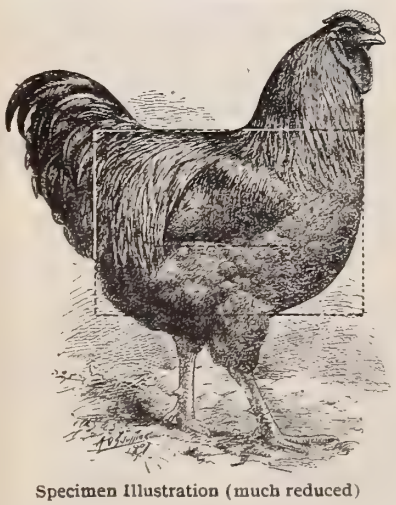
The RHODE ISLAND REDS

SINGLE AND ROSE COMB

THE most complete, authentic and attractive book on this popular breed ever published (80 pages and cover)—historical, instructive and beautifully illustrated. It tells the history and origin, how to select and mate birds for the breeding pens, as well as how to judge them both by comparison and score card; also much useful information along commercial lines.



Specimen Illustration (much reduced)

Edited by D. E. HALE,

Well known as Breeder, Judge, Lecturer and Writer

Fully Illustrated by

A. O. Schilling F. L. Sewell I. W. Burgess

CONTENTS

History of Rhode Island Reds
Standard-bred Rhode Island Reds
Proper Mating of Rhode Island Reds
Rhode Island Reds as a Fanciers Fowl
Rhode Island Reds as a Utility Fowl
Some Successful R. I. Red Farms
Judging Rhode Island Reds by Comparison and Score Card

CONTRIBUTORS

The contributors to this book are the acknowledged leading breeders and judges of the country. They include such men as Tompkins, Harris, Almy, Buschmann, Sibley, Rich, Miles, Harrison, Kaufmann & Windheim, Burleigh, Crowther, Coulter, Coe, Scott, Carver, Ricksecker, Smith, Hartley, Coffin, Dennis, Clarke, Drevenstedt and Denny.

COLOR PLATE made from ideal R. I. Red feathers selected and arranged by Artist Sewell—said to be the best thing of the kind ever published. Text and illustrations are brought down to date to conform to the 1910 edition of the American Standard of Perfection.

75 CENTS, POSTPAID. With a year's subscription to this Journal $1.00. With three years' subscription, $1.50. Mailed free for three subscriptions at 50 cents each

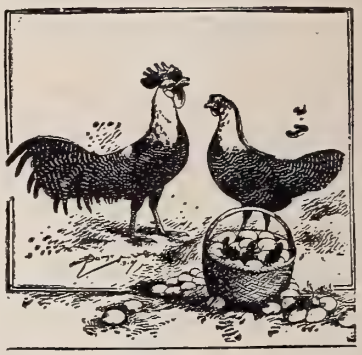
THE BOOK OF THE CAMPINES

BY THEO HEWES



IN preparing this, the latest and most authoritative edition yet issued on the subject of Campines, no effort has been spared to make it the best and most valuable work on the subject.

The Historical Notes, by Dr. H. P. Clarke, cover the ground completely and no man in either Europe or America is better qualified to prepare a chapter of this kind than is this man who predicted the present popularity of the Campine and kept advised of its developments both in Europe and America years before any of its present day advocates.

An Illustrated Campine Standard

Theo. Hewes in the mid-section of this book, with his lengthy and complete illustrated article presents the Campine breeders the first definite and specific exposition of Campine type and color that has been put forth. Accurate, definite description of every section, each illustrated with specially prepared drawings showing both perfect and defective shape and coloring, contrive to give the reader the most definite insight of Campine characteristics that has yet been offered.

Full-page "Hewes" charts of the kind made popular by Mr. Hewes in previous breed books are used to show correct shape and color and constitute the most satisfactory means yet attempted to attain this end.

ORIGINAL DRAWINGS

Four full-page and thirty smaller original drawings by I. W. Burgess working under Mr. Hewes' direct supervision are used to illustrate Mr. Hewes' article.

Chapters on care, management, breeding, conditioning and exhibiting by leading Campine breeders are included in this book and aid in making it the superior work that it is. **Price 50c Postpaid.**

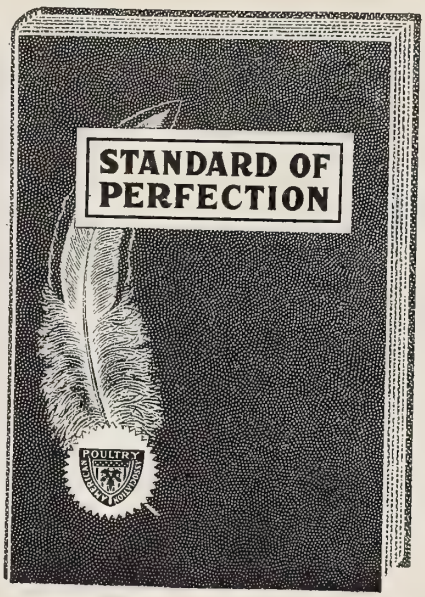
American Standard Of Perfection

1915 Revised Edition



1915 Revised Edition

The only American authority on the required characteristics of all breeds and varieties of Chickens, Ducks, Geese and Turkeys. THIS GREAT BOOK has just been revised and gives the correct Standard Shape, Color and Weight of every recognized variety of poultry, as well as the disqualifications of each variety.

THE BOOK YOU NEED

You cannot raise, mate, exhibit or sell fowls intelligently without it. The book contains all the NEW BREEDS admitted to the Standard. It also contains ideal illustrations of the different varieties of fowls photographed from living models and gives the correct color of plumage on your birds. It's a guide to success in the poultry business. No one can breed birds of any variety for exhibition without a copy of the **American Standard of Perfection** as a guide, and it is the only book of its kind published in this country. It is authorized, copyrighted and published by the American Poultry Association. Price postpaid, cloth, **$2.00**; leather, **$2.50.**

Everybodys Special Money Saving Offer

The Am. Standard of Perfection (cloth) and Everybodys Poultry Magazine for One Year **$2.25**

If you want leather binding add 50 cents to above price. Canadian Subscribers add 25 cents per year for Postage. Foreign Subscribers 50c per year for Postage.

We are now booking orders for delivery for April 10th, 1915. If you want your copy early, order at once. Address

"Ringlet" quality in Barred Plymouth Rocks has been sustained for more than 30 years by their originator and breeder, Mr. E. B. Thompson, Amenia, N. Y. For all these years he has been a most regular exhibitor and has made a record for himself and line that stands unapproached by that of any other breeder. His winnings are **Down-to-Date**, made **This** Year. **Last Year** and the year before as well as in other years. Some years ago Mr. Thompson won all Five Prizes on Pullets, a record never before equaled, nor since, except by himself. At the **1914** M. S. Garden New York Show Mr. Thompson won Five Prizes offered on Cockerels, making another unprecedent record with a quality that was most worthy of every honor won, Judges and Breeders alike freely stated that had more Prizes been offered, he would of won them all. This year Mr. Thompson came back again and again did the seemingly impossible. He not only again won all **Five First** Prizes offered on Cockerels, but he also won four of the five in Cocks including First, Second and Third. He won this year Every First Prize offered in all classes and most of the Seconds, Thirds, Etc. Consider this convincng record, there has never been anything like it before, and it fully establishes the real quality of the "Ringlet" Barred Rocks beyond any question. H. P. S.

FEEDING THE BROODER CHICKS

The Object is to Get the Chicks Through a Critical Period in Their Development With a Small Mortality and With as Rapid a Growth as is Consistent with Health and Vitality

By Prof. H. R. Lewis

Now is the season when the incubators are hatching and when all poultry keepers are concerned with the proper care and feeding of the newly hatched youngsters. It is safe to say that successful and permanent poultry farming depends primarily upon the ability of the poultryman to hatch and successfully rear to maturity a goodly number of birds each year, enough at least, to maintain his laying and breeding flocks up to their standard number and with no deterioriation in vigor or stamina.

Abnormal losses in the brooder can be traced, in most instances, to either improper temperature or to a faulty feeding practice. The former can, with care and attention to directions, be avoided. Proper feeding of young chicks, however, requires, first a sound knowledge of the nature of the chick's growth and fundamental principles of nutrition and secondly, it requires the working out of a simple, yet efficient feeding practise based on these principles. It is with these two phases of the problem that I shall especially deal.

PRINCIPLES OF FEEDING BROODER CHICKS.

The feeder must, first of all, bear in mind that the chick is a very fast grower, in fact, there is no young animal which makes the rapid gain in weight for the first two weeks which the chick makes. This requires special care and attention as this rapid growth necessitates an abundance of easily digestible and nutritious food material. Special precaution must also be taken to keep the digestive system in proper working order. The following considerations should be given special attention.

Practise Retarded Early Feeding.

The little chicks should not be fed concentrated feeds too soon. Just prior to hatching time the remaining portion of the yolk is drawn into the body. This yolk material supplies the requirements of the chick for feed for the first forty-eight or fifty hours. Heavy feeding prior to the time that this yolk material becomes well absorbed is very apt to be followed by bowel trouble and digestive disorders which result in a considerable mortality. The feeding of concentrated feeds before the second day in the brooder should be discouraged. The first food should be readily seen and nutritious. The artificially hatched chick has no mother to tell him what is best to eat and to take him out in search of feed, hence the poultryman must overcome this lack by providing the youngster with a first feed which he can readily see by its being light in color and conspicious. This feed must be readily digestible and nutritious to meet the heavy demand for nutriment. Pin-head oats, oat meal and ground wheat make a good first feed.

Grit is Very Important.

Feed plenty of grit and shell from the very first day. The fine sharp grit is needed to fill the gizzard and get the digestive organs in condition to function properly. Fine shell answers the same purpose and also provides some lime, much of which is needed at this time. The first feed in the brooder should be large quantities of grit and shell.

Clean Pure Water is Essential.

A constant supply of clean, fresh water should be kept before the flock. It should be placed in a fountain which cannot readily become contaminated and filled with litter and dirt. The fountain should be of a type which will keep the chicks from getting wet and dirty.

During the first three weeks, at least, a dry system of feeding is preferable to a wet system. Wet feeding requires special skill and, if care is not used, is very apt to get the digestive organs out of order, furthermore a greater amount of labor is required. The feeding receptacles may become dirty and sour which is conducive to disease and mortality. Dry feeding admits of a satisfactory growth and much less danger from sickness.

Wheat Bran a Valuable Chick Feed.

Wheat bran is a valuable adjunct to the chick ration. It is especially palatable and rich in protein. It has a high ash content (phosphoric acid) and is fairly bulky which makes it useful to mix with finer and more concentrated feeds. Wheat bran aids digestion through the presence of a ferment "diastase" which it contains, it is mildly laxative and can be readily obtained at moderate prices.

Provide Plenty of Ash For Bone.

The chick during its early growth makes bone rapidly, for this reason plenty of ash must be provided. Extensive experiments conducted at the New Jersey Experiment Station and published in bulletin 265 of that Station show the great value of bone in the ration. Dry granulated bone contains about 25 per cent of phosphoric acid and about the same amount of protein and can be secured by the one hundred pounds for a little over $2.00. There is probably no one better feed for young chicks than dry ground bone.

Some Meat is Essential.

The same series of experiments showed conclusively the great need of animal material in the ration for growing chicks. Flocks fed moderate quantities of meat scrap made by far the greatest and fastest gains and were much healthier than flocks from which all animal material was withheld. The food nutrients from animal sources seem in practice to be more readily available than the same nutrients from vegetable sources. Large quantities of meat or concentrated animal protein feeds should not be fed, especially early in the brooding period, as the forcing which results is apt to cause a relatively high mortality.

Plenty of green feed in the form of lettuce leaves, sprouted oat tops, green clover or alfalfa must be supplied. Such material is termed succulence, carrying as it does a high water content. It adds to the palatability of the ration, making it more digestible and keeping the chicks hungry and healthy.

Feed Little And Frequently.

Owing to the small size of the digestive organs and the rapid growth which is made, it is very desirable to feed small amounts at a time, but to feed often. During the first three weeks it is the best practice to feed at least five times a day and to feed each time as much as is cleaned up between each feeding. Do not allow feed to remain from one feeding to another. Such a practise not only allows the feed to become old and mouldy and hence dangerous but it also spoils the chick's appetite. Do not fail to have the floor of the brooder covered with fine chaff, preferably alfalfa or clover leaves and in this feed the grain ration. Exercise is the greatest preventative and remedy for poultry ills which has ever been discovered. Lastly, insure a clean feeding practise. Keep the hover clean and free from excessive quantities of droppings. Keep the floor of the hover and brooder covered with clean sweet litter, which must be dry at all times. Keep all drinking and feeding utensils clean. Cleanliness is the first requisite to any system of feeding.

A PRACTICAL METHOD OF FEEDING BROODER CHICKS.

There is doubtless no such thing as a one best ration for all conditions and under all circum-

Forty little huskies, less than a week old, fighting with one another for a chance at the bran pans.

stances. The following feeding practise is one which has been worked out at the New Jersey Station after many years of observation and trial. It is a ration which is in quite general use on poultry farms in the State with success. Its leading advantages are its simplicity, the ease of feeding, and the excellent results both as to low mortality and good growth resulting from its use. Where a large number of chicks are to be fed these special rations recommended can be profitably mixed at home, on the other hand where only a small number of chicks are to be cared for it will probably be the most economical for the poultryman to substitute in this general system of feeding some standard chick grain and mash.

THE FEEDING PRACTISE.

FIRST DAY IN THE BROODER: plenty of grit and shell on the brooder floor, with fresh water and sour skim milk before them all of the time.

THE SECOND DAY: Pinhead oats or oatmeal, three feedings, feeding only what will be cleaned up.

THE NEXT FIVE DAYS: Feed the following cracked grain ration five times daily on the brooder floor, giving only what the chicks will clean up between feedings.

Scratch Ration.

Fine cracked corn	40 lbs.
Fine cracked wheat	40 lbs.
Oat meal	20 lbs.
Total	100 lbs.

This ration may be supplemented by hard boiled eggs once a day and sprouted oat tops or other green feed twice a day in small amounts.

THE SEVENTH TO THE FOURTEENTH DAY: Keep wheat bran in small hoppers before the chicks all of the time and feed the above cracked grain ration four times daily.

THE THIRD TO THE EIGHTH WEEK: Keep the following dry mash before the chicks all of the time in hoppers and feed the above grain ration three times daily.

Dry Chick Mash.

Wheat bran	50 lbs.
Gluten feed	10 lbs.
Corn meal	10 lbs.
Ground oats	10 lbs.
Meat scrap	10 lbs.
Dry granulated bone	10 lbs.
Total	100 lbs.

After the chicks get to be five weeks old it will be more economical to use whole wheat and ordinary cracked corn in the grain ration and eliminate the fine cracked grains.

Out-door runs should be provided adjacent to the brooders and they should be kept covered with a green crop of alfalfa, clover or other tender succulent growth. The chicks should be let out on this range as much of the time as weather permits.

The Great Value of Skim Milk.

I wish here to call special attention to the value of sour skim milk in baby chick feeding. Sour milk is very palatable, it also contains much food value in its casine which is a form of protein or nitrogen. The greatest benefit however lies in its disinfecting qualities. The lactic acid present kills and prevents the multiplication of intestinal bacteria. White diarrhoea is one of the most dangerous of these forms. In order to get the greatest benefit from sour skim milk it should be given the youngsters to drink from the very first day, being given in a closed vacuum fountain so that the chicks cannot get their feathers soiled with it. It should be changed daily and the vessel kept perfectly clean. Experiments conducted at the Connecticut Experiment Station have proven its great value. Experiments conducted at the New Jersey Station as described on page 219 of the annual report for 1913, show that where sour skim milk is used as mentioned the percentage of mortality was very materially reduced over pens that did not receive it. Also the skim milk chicks made a gain in weight of over 28 per cent more than those receiving no milk. Since these conclusive tests it is needless to say that we are feeding skim milk (sour) to all of our young chicks during the brooding period with the greatest success.

THE FOUR ESSENTIALS.

1. An understanding of the principles governing the growth and nutrition of chicks.

2. The working out of a simple, inexpensive but efficient ration.

3. The liberal feeding of sour milk to the youngsters for at least the first five weeks and longer if possible.

4. Watch the chicks carefully and remember that even the smallest detail is too important to be overlooked or neglected.

THE VALUE OF SHAPE IN BREEDING

Standard Type and Size Particularly Fits the Disposition and Uselfulness of Each Breed.

By Charles D. Cleveland

What is breeding and what are the objects for which the breeder is striving?

Now that so many persons are for the first time embarking in the poultry business and are entering a field where the chief assets of the beginner are confidence in himself and entire ignorance of the principles of his newly acquired business, these questions will have to be asked and answered.

Of late years I have been visited more often than ever before by persons seeking advice, who tell me that they have never raised any chickens but that they believe that there is "money in the business" and as they are tired of the city with its confining surroundings, they want to buy small farms and start with poultry. My first question always is, what objects have you in view? Do you intend

ultimately to become a fancier and raise exhibition stock or do you intend to go absolutely into the commercial side of the business for the production of eggs and meat?

It is surprising how few of the beginners have actually made up their minds just what they intend to do and in fact I know of no class of business men who would have the temerity to put their whole savings into a new venture with so little forethought as the majority of these "newly hatched" poultry enthusiasts. It is indeed astounding that some men and women should take such an important step without having first given it more careful consideration. Live stock raising of any kind is something which requires a disposition and constitution particularly adapted to this sort of work. The ordinary persons will not succeed and no one will succeed unless his whole heart is wrapped up in the proposition. So it seems to me strange that more persons have not decided before they take the step, whether they were to be purely commercial men and women or whether they intended to become breeder-fanciers. It is, therefore, fitting that considerable thought and attention should be given to the solution of the question, what is breeding, before one decides to breed or what variety to raise.

I do not mean by these remarks that the commercial poultryman is not a breeder and in a certain sense a fancier. It takes almost as much knowledge of the game, fully as much perserverance, intelligence and labor to produce a strain of heavy layers or remarkable table poultry as it does the finest families of our Standard bred fowls, and too little praise is often given those who after patient years of endeavor have succeeded to an astonishing degree from the utility side, but my remarks in this article are chiefly directed to the fancy side of the poultry calling. They are intended to fit in more closely to the thoughts and desires of the fancier-breeder rather than the man who has but a single object in view, either the production of eggs or table poultry.

Breeding, of course, is more than raising. It is more than the hatching of a definite number of chicks, the raising of a majority of these chicks to maturity and the placing of them in the winter houses where careful feeding will produce an abundance of eggs. The farmer's wife with her mongrel crop of all sizes and colors is a raiser, but she certainly is not a breeder; nor is she a fancier and in nine cases out of ten she will embrace it with enthusiasm and become successful. The farmer's boy, one of whose irksome duties it was on his father's farm to be compelled to feed the chickens and clean chicken houses, is a raiser only, but give him the opportunity of going to a first-class poultry show and his father's consent to buy a few pure bred chickens, and in a great majority of cases he becomes enthusiastic and matures perhaps into one of the leading poultrymen of the country.

Now these persons who give up mongrels to go into pure breds must have definite objects in view. The first thing, of course, is for them to decide upon the variety or breed which they fancy. This opportunity is given them by seeing pure bred flocks in their neighbors yards or show birds in the poultry exhibition—and they generally make up their mind at the start to breed five or six varieties. They want to see which one is the best suited to their particular locality or to their own personal fancy and too many of them keep on breeding more than one or two varieties: for, as will be pointed out, there is danger to all but the most experienced in endeavoring to be a breeder of several different types. The ordinary individual having decided upon the breed he will adopt buys a few high class specimens and starts in. He has chosen either Rocks, Wyandottes, Leghorns, Orpingtons, Cochins, Brahmas or any other of the Standard bred fowls, and not having prior experience is at first greatly confused, over the apparent similarity between the shape of some of his Plymouth Rocks and the shape of some of his Wyandottes. It is very hard for him to see the difference between the shape of his Anconas and the shape of his Houdans and, in a great many cases where the colors are the same, he can get no definite idea as to what the shape he is after should be. Now the most important axiom or expression in the poultry world is this, "shape makes the breed and color the variety." This old saying has been repeated thousands of times in hundreds of articles. It has been expressed millions of times to thousands of persons—and yet it has not fully made the impression it should. Shape makes the breed. This means, of course, that each breed of Standard bred fowls has its own particular shape or form which distinguishes it from every other breed and the beginner must concentrate his attention upon this proposition. He must learn absolutely the correct shape of the fowls he is breeding, and he must make that shape so pronounced and clear to the eye that any one will recognize his fowls as belonging to a certain breed purely for their shape.

It is little wonder that beginners have been confused as to the type or shape when, in the show room, specimens of different breeds have been exhibited that look so much alike in form as to be scarcely distinguishable. This was, of course, the fault of the exhibitors and fanciers who showed these birds. They had not taken sufficient pains with their flock to concentrate their energies in producing birds of absolute definite and unique shape. The beginners (and indeed the old hands) had better buy a Standard of Perfection if he has not one already and spend his evenings in going over the shape of the different breeds with the utmost care and attention so that he may acquire a distinct and definite idea of the ideal which he shall have in mind in mating up his birds. Without this definite idea little or no progress can be made and it will be found that one breed if not carefully bred as to form and type will take on characteristics of other breeds and become practically useless as a Standard bred chicken. It is very noticeable, especially in some of the smaller shows, how near alike in shape some of the Orpingtons and some of the Wyandottes are; how close in general outward appearance some of the Cochins and some of the Brahmas are— and so on through the list. This is a dangerous thing and must be avoided at all hazards, for remember it is not color that makes the breed but shape, and color make the variety of that breed. Some people seem to have the impression that because a chicken is barred that it must be a Plymouth Rock.

It is, therefore, absolutely essential that the consideration of type or form be the first thing upon which a breeder's eye must be directed. The difference in the shape between that of a Plymouth Rock and a Wyandotte is as great as the "unlikeness" existing between a Minorca and a Leghorn if one only looks close enough; and, therefore, the object of the breeder is to look close.

Keen observation is the key-note of this whole

business. The eye must be trained to appreciate small differences and to carry them in the mind so that if the heads of two birds, one a Wyandotte and the other a Plymouth Rock, are covered so the observer cannot see them, he should be able to pick one from the other at a glance.

Now there are important reasons why each breed should have its own particular shape or type. The history of the breeds, so far as we are able to learn it, will show that they have been built up with patient care but they started in each case with different ancestry: and the breeders and fanciers who brought the various types in each instance had definite objects in view. How absurd the delicate and refined Leghorns would look if they had the shape of Plymouth Rocks; how much a Brahma male would lose his dignity and general appearance if he were formed like a Leghorn male. How dumpy and cumbersome looking a White Wyandotte female would be that was formed like a Cochin. And yet, take each of these breeds, put on it the type it should have and how beautifully it fits the bird in every respects. The long back of the Plymouth Rock with its rather low carried tail and single comb justs fits a bird of the Plymouth Rock style and size and the height and length of the body sets off the other sections to the best advantage. The graceful curved lines and close fitting rose comb of the Wyandotte are just suited to this kind and weight of bird and produce a wonderfully graceful, yet active, type; and each of these various varieties is useful along its own line. The Wyandotte has a great reputation as a winter egg layer and as perhaps the best broiler; the Plymouth Rock is well known as a good layer and a fine market type, especially for roasters and soft roasters. The Brahma use to be one of the best winter laying varieties and is probably more extensively used than any other fowl today in the soft roaster trade for crossing with other breeds. And so through the various breeds you will find that each size and type particularly fits the disposition and usefulness of each breed. And again(if the first consideration of the breeder is not directed toward type there can be no uniformity among the various flocks in the country as to shape. It is most desirable that the leading breeders of each breed agree, in so far as possible, even in small details, as to the shape of their favorites. There never will be absolute uniformity of type because all men cannot see exactly alike but the efforts of the Specialty Clubs have done much to create greater uniformity of shape and form and should be encouraged to the limit through the yearly publications of these Specialty Clubs; in the discussions between fanciers at the show, and by study.

Visitors at our farm are often astonished to learn that we know the birds apart. They cannot see how this is possible, especially where a large number are housed; but there is of course nothing wonderful about this. It is simply evidence that we have cultivated our observation and this every breeder must do if he finds, as I have quite frequently seen, that he cannot tell one bird from another. Then he must devote all of his leisure time to the careful examination of each individual, for no two chickens are alike any more than two persons. This is the key note of a breeder's ability to fix his type in his brain. He must, of course, have definite ideals as to what he is striving for, as has been said, but he must also have the ability to see his ideal type

The "Regal" White Wyandottes, bred by John S. Martin each year become more widely known, more highly valued for their genuine utility merit as well as their show qualities which they have repeatedly proved by winning numerous first honors in the most important shows in America. Added to Standard show room excellence of type, Mr. Martin proves the stamina and hardy growing nature of his strain by hatching and rearing large numbers of early chicks, beginning to hatch in January while the snows in Canada are still deep. Mr. Martin's Wyandottes are all the year around growers. The conditions under which they are raise are such as can be provided on any farm. Through his trap-nest system he keeps a record of his best layers and thus has preserved and increased their egg production. Mr. Martin has always maintained that the Wyandotte must have a reasonable length as as well as fullness of body to serve the best purposes. The unretouched photographs of a "Regal" February hatched, six-months-old cockerel plainly portrays the sturdy build and serviceable proportions that are common in this strain. Started as early as February such a specimen develops into elegant show room form at the time of the state fairs and the best autumn exhibitions. Mr. Martin's sale of such birds has developed to an extent that adds greatly to the profits derived from his famous "Regal" White Wyandottes.—F. L. Sewell.

when it is before him in the yard and he must then direct his labor toward making all the other birds of his flock look as much like this ideal specimen as possible. This can only be done by judicious line breeding which will be treated in a subsequent article.

As a general proposition it may be said that the shape of the offspring will resemble that of the hen and that the color and fancy points come chiefly from the male. I will not go into an elaborate discussion of this proposition which like any other has its exceptions, but simply state the proposition as a guide by which the breeder can improve the shape of his flock. Once having decided upon the ideal type, females carrying that type should be selected for the breeding pen and if they prove good breeders, be retained as long as they lay a reasonable number of eggs. It is wonderful how short a time is required to improve the type of a flock of fowls if careful attention is paid to this point alone; but it will be a long time before the correct type is absolutely fixed in the flock, especially if line breeding

is not resorted to, because one must always remember that a considerable number of the chicks each year will revert back to ancestors whose shape was not just that desired. I should be perfectly willing, after having bred White Wyandottes for upwards of twenty years, if I was cleared out to start over again with a flock of birds that had as near the desired shape as possible, irrespective of color, and I would for a number of years solely with this shape in view and pay little or no attention to color until I had this type firmly in all my chickens and ths I believe to be the proper principle, and not to be drawn into using birds of bad shape in the breeding pen simply because they have good color. It is truly painful to see at times birds of the most grotesque and awkward shapes winning in the show room because they are very beautiful colored birds. These birds cannot be distinguished from the ordinary dung-hill fowl by their form but are given definte names because they have pretty feathers. Remember again that it is not color that makes the breeding but shape. Shape makes, or destroys the bird.

REVIEW OF THE 1914-15 SHOW SEASON

General Improved Quality Noted In All Varieties, Bred to Better Shape and for Highest Standard Qualities.

By J. Harry Wolseiffer

The show season of 1914-1915, which ended with the Madison Square Garden exhibit, February 12th to 17th, was as a general rule, number of entries considered, not up to the last show season, taking all the exhibits throughout the country in consideration. The hoof and mouth disease was one cause and the scarcity of ready cash among the majority of poultry keepers another. The truth is not always good to hear, but the fact should be faced that last year, due to general business conditions, war, etc. was not a good one in every respect, even the commercial poultry raiser was hit to some extent by the war-time price of feeds. Nevertheless, there has been at no time, to the poultry keeper with up-to-date management, that the little "American Hen" has not paid the board bill and some over, and the outlook to the far seeing poultry keeper is just as bright as it ever was, and to some a little brighter.

The weak-kneed, and some who had but little capital to carry on reduced operations sold out, or reduced their stock to a low figure and the progressive breeder of this country will sooner or later be asked to supply this real shortage.

The poultry exihbits generally showed improved management, better cooping and general management being of a higher order than formerly. Although in some cases, especially among the smaller shows, the show management could be improved upon. In several of the larger cities, two and in several instances three shows were held, and in the majority of cases all the exhibits were harmed. New York City seem to be the one place that two first class shows may be pulled off, without harm being noticed, Chicago may be the other city that could pull off this stunt and make a success of it, but in most cases the many small shows may to a certain extent harm the so called big show, but to curtail the small show would be a death blow to the future of standard bred poultry. It is at these shows that the future breeders and exhibitor at the big shows are made. They are the educators and training grounds for Madison Square Garden, Boston, Palace, Chicago, Philadelphia, etc. and the small show should be encouraged by all well thinking poultry keepers.

One thing noticable in the many shows, the writer had the pleasure of handling the fowls, was the improved quality in almost every variety and the difference in the quality in different sections of the country. In the shows of the South, Rhode Island Reds showed their quality equal to any part of the country. Other varieties in the Southland have improved wonderfully within the past few years but the Rhode Island Reds have taken the biggest jump in improvement. The Red class at the Augusta, Ga. show was of very high grade and this can be said of Spartansburg, S. C., and other Southern shows. Barred Plymouth Rocks, taking all shows throughout the country, again led in numbers and quality improved, although the better color and barring is found in the Eastern section of the country. The majority of the Barred Plymouth Rocks having a wider bar in the South and in the mid-West, the color a trifle darker than shown among the winners in the East. White Plymouth Rocks were generally good in all sections of the country. The same can be said of the Buff variety, although the West seems to have larger numbers than the East, Partridge Plymouth Rocks coming stronger all the time and the great showing of this variety at Madison Square Garden in February should do much towards moving this variety forward at a faster pace. In the Wyandotte family, the whites still retain their big lead, and high grade fowls of this variety graced the coops of many exhibitors all over the country. North, East, West and South, many good Buffs were shown, and in some sections Silver Wyandottes came out in strong numbers and improved quality. Rhode Island Reds still improving each year in color and shape and at almost every show in good numbers. Light Brahmas have come out stronger in some sections than ever before and the outlook is good for a come back in this grand variety. Single Comb White Leghorns gaining in each show in both numbers and quality and the quality especially good in their stronghold, New York, New Jersey, Pennsylvania, Connecticut, etc. Buffs increasing in popularity, the Blacks and Browns shown were above the average in most instances. Orpingtons had a big year, especially the Buffs, which lead in numbers in both type and color. The White Orpingtons, after a year's stand still, again forged to the front and the outlook is for a better demand for this variety in the future. Blacks held their own with improved quality at the majority of shows. Blue Orpingtons seen for the first time in many of the smaller shows.

Black Minorcas were shown in both larger numbers and better quality than in former years. Dark Cornish came to the front in grand shape during the season, due largely to the efforts of a wide-awake club and members working in harmony with the officers. Houdans, Campines especially the silvers,

Anconas improved over former years. Bantams and Pigeons while quality of high order fell down in the majority of cases in numbers. In this season of lesser entries, the so called American, English, Mediterranean, and Asiatic classes had the call. To this improved quality of fowls in not only the large shows of the country, but in many of the smaller ones, brings to the mind that the judges work is harder than in years gone by. The work must be carefully done, more time is required in selecting the winners from a number of good ones, than when the quality was not so good, competition not so keen and the few winners in the average show stood out by themselves. The Judge to-day is often confronted by large and strong classes in the so called small show and as these shows are educators to the great army of beginners, the work of the judge should be careful and painstaking. Too many shows make the mistake of placing the figure so low that to make a days wages, the judge hurries his work in order to return to his farm or work in order not to loose money. Every poultry association should try to pay the judge who places the awards enough to stay over one day after the awards are made. It often saves a lot of trouble for the Association and many times a wrong impression of the judge is corrected, whereas, if compelled to go as soon as the awards are placed, the correction or explanation could not have been made, while a general all around improvement has been made in all varieties. Breeders from now on must pay more attention to shape than ever before and this applies to the poultry judge as well. The Agricultural press is not helping the breeders of Standard bred poultry, but has helped the country to go utility mad, a situation that has no foundation back of it, as the experiment station records, and laying contests have proven time, time and again and many of the leading progressive breeders of this country who have been users of trap nests for years and who are aware that the thorough bred is ahead of the mongrel everytime.

The Red Sussex Fowls

Popularity an Important Factor in making Sales at Good Prices - Similarity of Red Sussex and Rhode Island Red History - The Sussex a Fuller, Heavier Bodied Breed - Strong Surface Color of the Red Sussex - Slate an Important Factor in the Undercolor - A lesson to be Learned from Rhode Island Red Breeders.

By F. L. Platt

During the Buffalo Show last Thanksgiving week I was sitting one evening with Harold Tompkins the well known Rhode Island Red breeder. Just in front of us was cooped a Malay hen. I said to Mr. Tompkins, "Drevenstedt and Sewell tell me that the red Malay hen there is of the old true type. Such type and substance is not often seen nowadays, and it is interesting to see what the best birds of the old days were like."

Then, I added, "It seems to be the general opinion that Malay is one of the best of its kind now living. If she were put up for sale, what do you suppose she would bring to-night? Said he, "About sixty cents."

It was just the year before that I paid Mr. Tompkins $60.00 for a Rose Comb Island Red pullet, purchasing her for a breeder in Ohio. What made the difference in the market price of these two females? Each represented the very highest type of their two respective races.

The reply can simply be: the difference is in the popularity of the breeds; the interest that is created by the best specimens of the breeds. In a popular breed there is a big demand for the best specimens and breeders are willing to pay $60 or even $100 for less than 10 lbs of bone, flesh and feathers. They know full well that the investment will pay them and pay them well.

It is on the basis of the growing popularity of the Red Sussex and the wide spread interest in them that they are a good breed to take up. Moreover, good profits are often made in taking up a new breed of unusual utility and great beauty before its merits and general adaptbility are commonly understood and in the supplying the demand for stock birds and eggs for hatching.

The Red Sussex claim for popularity is based on its utility. It is a splendid grower, a fine layer, a good mother, the young fatten readily, mature quickly; and in short, the Red Sussex is the ideal family fowl. The needs of the family require both meat and eggs and the Sussex is an all around fowl. It is hardy and thrifty.

The Red Sussex like the Rhode Island Red had its beginning in the farm yards of practical poultry keepers. It was the thrifty poultry farmers of the county of Sussex in England who developed the Sussex breed. The pullets are largely kept for eggs and breeders, and the cockerels go to the fattening shed to be primed for the London markets.

They made the highest priced poultry in the great Leaden hall market in London and have been known as the famous Sussex milk-fed chickens for many years.

The Sussex, like the Rhode Island Red, is a long bodied fowl. It varies, however, in being heavier breasted, longer and broader feathered and not so rangy in leg. The standard weights are: Cock 9 lbs Hen 7 lb Cockerel 7½ lbs and pullet 6 lbs. These weights are easily attained and the best specimens, especially the cockerels, exceed them.

The Red Sussex has the black tail of the Rhode Island Red, but the black ticking in the hackle is not Standard in the show females. The undercolor of the female is slate; of the male, slate shading into red at base of feathers. The value of this natural under-color cannot be better setforth than in the comments, of Mr.C. M. Whittaker of Michigan in the March, 1915, issue of the Rhode Island Red Journal. After quoting the letter of a buyer who was disappointed in receiving Rhode Island Red females that showed slate or "smut" Mr. Whit-

Owen Farms have always stood for quality in their several varieties, no line has ever been exhibited to a greater extend, or with more success. Above is shown their Second Prize Palace New York White Orpington Cockerel, at this show they also won First Prize Cockerel. First Pen. First Hen. Third Cock etc. Also making a splendid win in Buff Orpingtons. S. C. White Rocks, Reds etc. You can get quality always at Owen Farms, Owner Mr. M. F. Delano assures this.—H. P. S.

taker says:

"This letter illustrates the stand taken by many inexperienced breeders in regard to slate in the under-color of Reds. It is hard for beginners to realize that exhibition Rhode Island Reds are not always the best breeders, and that slate, or smut, that bugbear of the inexperienced, is a positive necessity in the breeding pen.

"To the best my knowledge the Rhode Island Red is the only breed outside of the buffs and whites in which the Standard of Perfection does not either demand or allow slate or black in the under-color. When the present standard was written for Reds the breed was simply a dark buff and in the buff breeds slate is not necessary. Our breed has developed each year a stronger and richer red. This has been brought about by the judicious use of slate in the under-color, and to keep this color the slate also must be kept.

"The Standard says that the under-color of the Red shall be red, and many judges treat slate in the show room as very nearly a disqualification. Other judges, who have given close study to the breed, are more lenient, and are not very severe when they encounter a slight tinge of slate in an otherwise excellent bird. Other points being equal, of course, clean under-color will win, but most judges, who are well up on Reds will hold that slate, the necessary evil, will win over its opposite an under-color that is too light.

"As I have said before in these articles, slate holds the surplus color pigment needed by the surface and under-color and by the back markings in the wing and tail. Without slate we will speedily run to a buff without any black markings like Buff Rocks and Buff Leghorns. With slate we will build up a breed of rich, dark red bird with strong dark markings in male and female.

"In the introduction of slate into the mating it is advisable to use it on the female side only. A strain of females that is noticably deficient in wing and tail markings is a strain that has been bred without slate. A flock of pullets that is buff instead of red has been bred without slate. On the other hand, every flock of dark red birds and every flock in which males and females show strong black markings have been bred to this point through the judicious use of slate in the under-color. And, moreover, the few hens that are seen throughout the country that keep their dark red pullet color after molting are bred from ancestors with slate in the under-color.

"In time I believe we will have no fading Reds, not in isolated instances, as we have now, but as a rule. Most carefully bred flocks produce a few more than they did the year before. Through the use of slate as one of the most important factors we will each year increase the percentage of non-fading hens, until in carefully bred flocks the hens will rival the pullets in color.

"In building up the black Markings of the female it is of course necessary to use a male strong in this section. Then for best results mate him to females with black markings as pronounced as possible and with a surplus of color pigment in the form of slate. Much quicker and better results will come in this way than by trying to bring about the required improvement through the male alone."

We have the slate as a Standard requirement in the Red Sussex and the birds that have it are the ideal ones. This means that our best breeding birds; are our best show birds it means that Red Sussex breeders will not show one type of bird and reserve another color type of their breeding operations. Because of this I consider the possibilities of color breeding vastly greater in the Red Sussex than in the Rhode Island Reds.

And, may I now say without the thought of boasting that I already have several males that are of deeper and richer color than any Rhode Island Red male I ever handled. I attribute this in a large measure to breeding the strong sound color in the under plumage.

Under-color has been set arbitrarily by stand makers for a good many years and when everything else that I have done in the fancy is forgotten, I hope it may be remembered that I secured as Standard for the Sussex and Companies, an under-color that is natural to the varieties and is consistent with their breeding values. Nature always paints the surface plumage of the wild birds and gives them a color to their under plumage that nourishes and reinforces the surface color.

With our strong color pigment, as Red Sussex breeders, we have to still contend with some black ticking showing in the surface of the backs of our females. We must learn a lesson from the wondrously level color of the Rhode Island Red pullets. While we can match them with levelness of color and excel in strength and richness of our female color,we want more of this kind. And, Sussex breeders will increase the quantity of their quality females. Watch and see. Better still, get some.

"AUBBARD BOY II"
FIRST PRIZE BLACK ORPINGTON COCKEREL
MADISON SQUARE GARDEN-FEB 12-18, 1915
BRED AND OWNED BY FOXAURST FARMS, LIME ROCK, CONN

The Foxhurst Farms, Lime Rock, Conn. Have made many Madison Square Garden New York records for the past several years without a break, but never any to compare with that of 1915. Quality was the prime factor ever in making these wins, never before has such general quality in S. C. Black Orpingtons been seen. Both color in all its brilliancy and shape combined was seen at its best in this whole line, and in the above winning Cockerel in particular and his mate who ran a close second. There can be no question but that this variety and this line deserves the best we can give it, its practical worth is well known, while its exhibition record is as long as this world is great.

The Ideal and Profit Paying Leghorn Farm

Combine Utility and Fancy. Bring Business Methods to bear in all Branches. Heed the Demand for better Stock.

By J. Courtney Punderford.

I will try and set down the methods used on Monmouth Farms, and give in detail the ideas which I have carried out for the past twelve years, which I am glad to say, have made my investiments a most I am glad to say, have made my investment a most to portray Monmouth Farms as the ideal plant. I will only state facts which in my estimation, tend to make the heading of this article a reality. I have no secrets, and my methods and management are open to all, and, strange to say, I am not seriously contemplating writing a book, arrange to have some paper publish it, and tell the Poultry world how I made, or make would sound better, $7.01 profit per hen, per year.

To start with, I am firmly convinced that the ideal way to run a down-to-date Leghorn plant is to combine utility with the fancy. Why? Here is the answer. There is twice, and even three times the money when you combine the two. Take for instance when the breeding season is over and you have a fine strain of White Leghorns, with good type, you break up your breeding pens in June and send out a list for your July clearence sale; you can afford to sell close, for you have had the use of your breeders. They sell even then at good prices, and from July to the latter part of September is a rather dull time, and selling your males and females during these months brings in a good revenue. But, could you enjoy this if you did not have at least some exhibition birds, or specimens of high quality on the plant? Assuredly not, you would be doing as hundreds of farms do, sell off your birds before the moult begins to the "wandering Jew," who drives up with his wagon and gives you the large sum of 12 cents per pound. This is what the farm receives when they simply have the plain, ordinary run of Leghorns, for their stock is not demanded by the discrimminating buyer and their number is legion. Take a farm which has the blood of exhibition birds running rich through the veins of its flock, and the birds bred to the standard, this quality is always in demand, stock, eggs and baby chicks selling whenever offered.

Single Comb Reds as usual were a feature class at the Palace New York Show with 155 birds of this variety shown, the above Cock winning First Prize stood out well in superior quality, a bird of exceptional size, with evanes in rich and sound color, wonderful in brilliancy. Mr. E. M. Dutton, Newfane, N. Y. has produced several winners at both New York Shows, Buffalo, Rochester etc. He is also one of our oldest breeders who has made his line what it is in breeding value.—H. P. S.

The poultry man of to-day is demanding a better bird, a standard bred bird; that is why all farms should look ahead and breed better stock. It may cost more in the beginning to start with fine stock, but your returns in a short time will fully compensate your outlay. It costs no more to feed and house en exhibition breeder than it does a mongrel, nor as much. You can demand and will receive once again the prices for your standard bred stock than you would for ordinary birds, or eggs. Here is the way I run Monmouth Farms.

A certain section of my plant is set aside for my exhibition matings, and the rest of my plant is entirely mated up. I have no laying houses, they are all breeding propositions. Why do I do this? Because when I receive a large order for hatching eggs I can call upon my entire plant and do not have to wait a long time to collect the required number of eggs, and am ready for the next order. If I do not have hatching orders, I can send them in to market and receive just as high a premium as if they were sterile eggs. You see I am hitting it both ways.

Do I breed pullets? I do, but they are February hatched, have gone through a partial moult, are mated to yearlings and two year old cockerels, and are ideal breeders. They have laid me a goodly number of eggs before the moult lessens their egg yield, and I can afford to carry them awhile knowing the wonderful breeders they will be a little later. I always aim to get out about 300 chicks in February, for there is a large demand for early pullets on the large summer estates, the own rs wishing a fresh looking female, one which will lay till the owner returns to town in October, and after that they are not particular what becomes of them. Early pullets always bring a good price. I also want them for my own use. I never hatch after April, except for my exhibition stock.

As soon as my cockerels arrive at the Squab Broiler stage, which is 14 ounces, taking eight weeks to do so, they are picked dry and sent to the New York hotels, with whom I have a regular contract. They will bring $1.00 a pair. Not a cockerel is saved except from my prize matings. By this method, I get the room I need, save feed, pay my feed bills, and when Fall arrives have a very high

class lot of males on hand, which I would not have should I hatch from all my utility matings on the farm. I have been on so many plants where they have hundreds of cockerels running about, eating their heads off, and depreciating in value each week, for they have not been culled, and later on are worthless. This is one of the many leaks on large farms. When I put my youngsters on range I seperate the sexes, and the cockerels never see a female until they are fully matured and ready for breeding. You will have better males and females when Fall arrives by doing this. I believe in absolute free range. Any other way of raising young stock is unnatural, and the best results will not be attained. When the breeding season is over, I put all the males I intend to keep over another year in shaded runs by themselves, and moult them out there, and they are not put back till I wish to start breeding again. I never force the molt, let nature take its course. I greatly prefer the hen which moults late for my next season's breeder. In my large utility matings I run 7 males with 100 females, and in my single matings 1 male to 10 or 12 females.

Once a week each house is disinfected, once a week the nests are cleaned and fresh shavings put in. Twice a month each male is dusted. Once a week the drinking founts are scoured and disinfected. Twice a month the litter in the houses is changed. Each morning the dropping boards are cleansed. Each year all the roofs are tarred. I use the curtain-front houses, with very little glass.

My youngsters are fed on Standard Chick food. After the third day, a dry mash is kept before them at all times, plenty of grit, pure water, a little meat scrap and sprouted oats. As soon as I can I put them on larger grains. When on range I hopped feed both grain and mash. I have had the best results this way. The grain does not sour on the ground and there is absolutely no waste. My old stock is fed grain morning and night, dry mash in hoppers at certain times of the day, at noon they are fed a small amount of crumbly hot mash. At night I put a certain amount of Scratch feed in a large cooker and allow it to boil, or cook over night. By the next day every grain is swollen to three times its natural size. This is mixed with my Laying mash to a crumbly state, and fed in troughs. I have a fine egg yield the year round and excellent fertility, but you must use your head when feeding in this way, for they do not need the same amount of grain morning and night, and cannot stand it when this method is used.

On my free range where I have not natural meadow land with a good stand of grass, I sow Essex Rape. I broadcast this the latter part of March and harrow it in, and it is without doubt the best green food I have ever seen. Allow it to get a good stand before you turn your youngsters on it, and it will last till you are ready to put your pullets in winter quarters.

After reading this through, I think you will say that I have only applied common sense methods, yet it is wonderful how many farms do not do this and drift year after year in a hap-hazard way, and, at last, drop entirely out.

Combine utility and fancy, bring business methods to bear in all branches, use your head, give full value for money received, and success is yours.

Sour Skim-Milk and Chickens

A By-product of the Farm That is Wasted in Many Places, But Which Has a Great Value as a Food for Chickens

By Willard C. Thompson

Milk is one of the world's most universal foods, for nature has given it both to human beings and to animals as an important part of their diet. Until comparatively recently, however, it has not entered into the ration of poultry as a common food stuff. After the coming into common use of the farm cream separator there has developed a farm by-product, namely skim-milk, which the farmer has been learning to use as economically as possible. He has become familiar with its value as a food for growing calves and pigs, but now there has been opened up another avenue of usefulness for this commodity. It is a most excellent food for growing chicks and laying hens. In this particular the farm poultry flock is a bit more fortunate than the commercial poultry flock, for they will be more apt to have a supply of milk than the latter. However, the owner of the commercial flocks are going to procure milk as soon as they realize the immense value which it has. Assuming that it is a good food for poultry, the question arise as to how to feed it, how much to feed, when to feed it, what to feed it to, and why it should be fed.

Sour Skim-milk.

On the average farm it is almost impossible,

Buff Orpingtons bird by the Old Forge Poultry Farm. Spring Grove Pa, have made their records as both layers and winners. The above pullet laid 229 eggs last season while several othesr of her line have excellent records. Mr. P. H. Gladfelter the owner is particularly well pleased with the practical qualities of his strain. He trap-nests all his birds and has combined the laying quality with the best of Standard color and shape. Making his line one of exception value. J. T. H.

and it is impracticable, to keep skim-milk during the greater part of the year, especially in the warm months of spring, summer and fall. To do so requires the construction of some cool house, such as a spring house or refrigerator room. Consequently much of the skim-milk that will be on hand for the feeding of poultry will be sour. Fortunately sour skim-milk is preferable for this purpose, so at once one of the biggest problems of the farmer is solved. There is a reason for this. Skim-milk in souring, undergoes several changes due to the activity of the souring bacteria which are always present in milk. The different parts of the skim-milk are made more easily digestible and become more or less solid in form so that the birds can get hold of it better. Especially is this important when it is used for baby chicks, for their little digestive organs are incapable of using sweet skim-milk, whereas they can digest the soured milk very quickly. Through experience the writer has found that both young chicks and the mature stock find the sour skim-milk a very palatable food. Due to its easy digestibility and the presence of the acid in its consumption keeps the digestive system in perfect running order. In the chick this means an added consumption of food that results in increased gains and more vigorous health, and in the layer it means increased activity in every way that finally fills the egg pail much fuller than it has ever been before. The accompanying picture, Figure No. . ., shows some Leghorn layers busily engaged in getting their morning drink of sour skim-milk. There were two hundred pullets in the pen from which this picture was made, all of which received free access to a pan of sour skim-milk every day. They laid at least half again as many eggs in the past winter months as did an equal number of the same kind of birds which did not have the milk.

As all birds are much inclined to be creatures of habit it is best to furnish skim-milk to them always soured, rather than feeding it sweet for a while and then feeding it in the soured condition. This alternate system will result in upset digestive organs every time.

For Baby Chicks.

In the spring, if the farmer is desirous of raising good healthy chicks, a certain amount of sour skim-milk should be set aside for the purpose of chick feeding, even though other animals may have to be stinted a little. It is in this role that I believe that sour skim-milk is of greatest importance. From last spring's experience in the feeding of it to several thousand chicks the writer feels that almost as much as fifteen to twenty cents per gallon could be paid for it and then be profitable. It should be the first food that the baby chicks receive after being placed in the brooders, or if the chicks are raised by the hens, after they have been removed from the nest to the brood coop. Often times it might be advisable to use a dropper, such as is used to fill fountain pens with, and force a drop or two of the sour skim-milk down the tiny throat when they are transferred to either the brooder or coop. Any way, after the chicks are about forty-eight to seventy-two hours old they should have a clean pan of sour skim-milk set before them. If they start to pick at it readly they may be given water at the same time, but if they hesitate to eat the milk, the water basin may be removed for a few hours thus forcing them to try the only alternative in sight. They soon learn to eat it ravenously.

The sour skim-milk should be kept before them all the time in open basins. It is not necessary to mix it with mash or other materials as was the former idea held by many. Any type of dish may be used as long as it is low enough for them to drink or eat from easily, not so large that they will be apt to get into it and thus contaminate it with dirt and filth, and not so complicated that the thick milk will not always be readily before them and lastly, readily and easily cleaned and kept clean. The milk dish can well be a simple open pan about five or six inches in diameter and about one and one-half inches deep. It must be cleaned and scalded every morning and be refilled as often as it is found to be emptied or very dirty. As the chicks grow they will consume ever increasing quantities of it, and so it is necessary for the poultry raiser to keep a watchful eye on the chicks.

The results of feeding this material to chicks during the first ten weeks of their lives are marvelous to the person who has never tried it. Primarily it gives them a better and more uniform start on the road to growth and development. If a chick does not get a good start, as the poultryman says, it is likely to be a stunted undeveloped bird through life. The secret of the sour skim-milk fed chick getting this better start lies in the fact that it obtained a food that was easily digested and that was turned to immediate use in the building up of the body. Its palatability and good effect upon the digestive tract increased the appetite of the chick and foods which all tended to hasten growth and keep it steady and continuous. Successful chicks are those that never stop growing until they are matured. Another particularly important result of the feeding of the sour skim-milk is the tendency to develop the flock uniformly and evenly, adding increased health and vigor which are ever necessary to the proper growth and development. It does away with, or at least materially decreases, the percentage of culls and stunted young stock. At ten weeks of age milk fed chicks are in excellent form for the summer on the range, or in the fields.

For Growing Stock.

It is a continuance of good policy and also of money-making methods to furnish sour skim-milk to the growing stock on the range during the summer. It is to be given in this case, as it was to the brooder chicks, as a supplementary food to the regular rations. Do not let it fill the place of the grains or mashes, but feed it along with these in order to get the best and most economical results. During the hot days when the young birds are out in the peach orchard, or running through the fields, the sour skim-milk should be placed in some cool spot where they will be able to come for it at any time. It should never be placed where it will be exposed to the sun or in a dry, hot spot. The pan to be used can be an ordinary flat pan, about twelve inches in diameter and

some four or five inches high. It should be cleaned carefully every morning. All old milk should be emptied out every morning and fresh milk supplied. Never fill up the pan until it has been cleaned. The pan should be placed in the same spot or locality every day, for the chicks will soon learn to know where to go for the treat. Last summer pullets running on a corn field range and also another flock running in a peach orchard grew steadily and with only very slight mortality, due, it was thought, primarily to the sour skim-milk to which they all had free access during the season.

For Laying Hens.

The hens that are producing eggs need lots of protein food for they are building up eggs within their bodies, and these eggs are mainly protein in character. Thus layers need practically the same kind of foods that the young growing chicks should receive, for the latter build up body tissue and develop their organs and skeletons from protein materials in the food they receive. Sour skim-milk is high in protein and is admirably suited for this very purpose. The flock of two hunderd pullets referred to above is a good example of what can be done with sour skim-milk as a food for the laying flock. The tonic effect which it has upon the system of the bird is especially important in the case of the laying hens, for they are really machines running at high gear, taking in large quantities of raw food matriels and transforming them into the coveted product of eggs. Sour milk tends to keep all the organs of her system in working order so that nothing interferes with the natural work that the hen has before her. Sour skim-milk, supplied every day in pans similar to those used on the ranges, is an important part of the ration of the winter laying hens, as we are coming to understand the feeding of laying hens. The reasons are the same as for the baby chick, including easy digestibility and palatabilty. The writer is of the opinion that sour skim-milk kept always before the hens or pullets in the laying houses may take the place of some of the meat scrap in the dry mash, though it should not substitute for all of it. Remember that sour skim-milk fed to any kind of poultry is a supplement and not a substitute.

In the winter it is necessary to keep the milk cans near the stove or furnace, or at least in some warm place, for milk cannot sour in a cold room. The bacteria which cause milk to become sour do not work except when they are warm. If the milk is kept warm it will not take long for it to sour. It can be fed as soon as it starts to thicken or coagulate. It should not be fed when it has reached the point where it has a bad smell and is molded. Keeping the milk cans and pails thoroughly clean will mean a great deal in the furnishing of a clean, pure sour skim-milk to poultry.

SAVE THE SOUR SKIM-MILK.

Rhode Island Red Quality

A Comparison of the Rhode Island Red Classes at the Eastern Shows for Season 1914-15

by W. H. Card

In Reds the even shade from head to tail has come to stay; the exact shade of red is immaterial but it must be EVEN as the splendid display of Reds in all our larger shows demonstrated.

In spite of critics against the dark red, no one, not even the critics desires to see again in our shows the Reds of many shades of less than a decade ago. The uniformity of color is the glory of the breed.

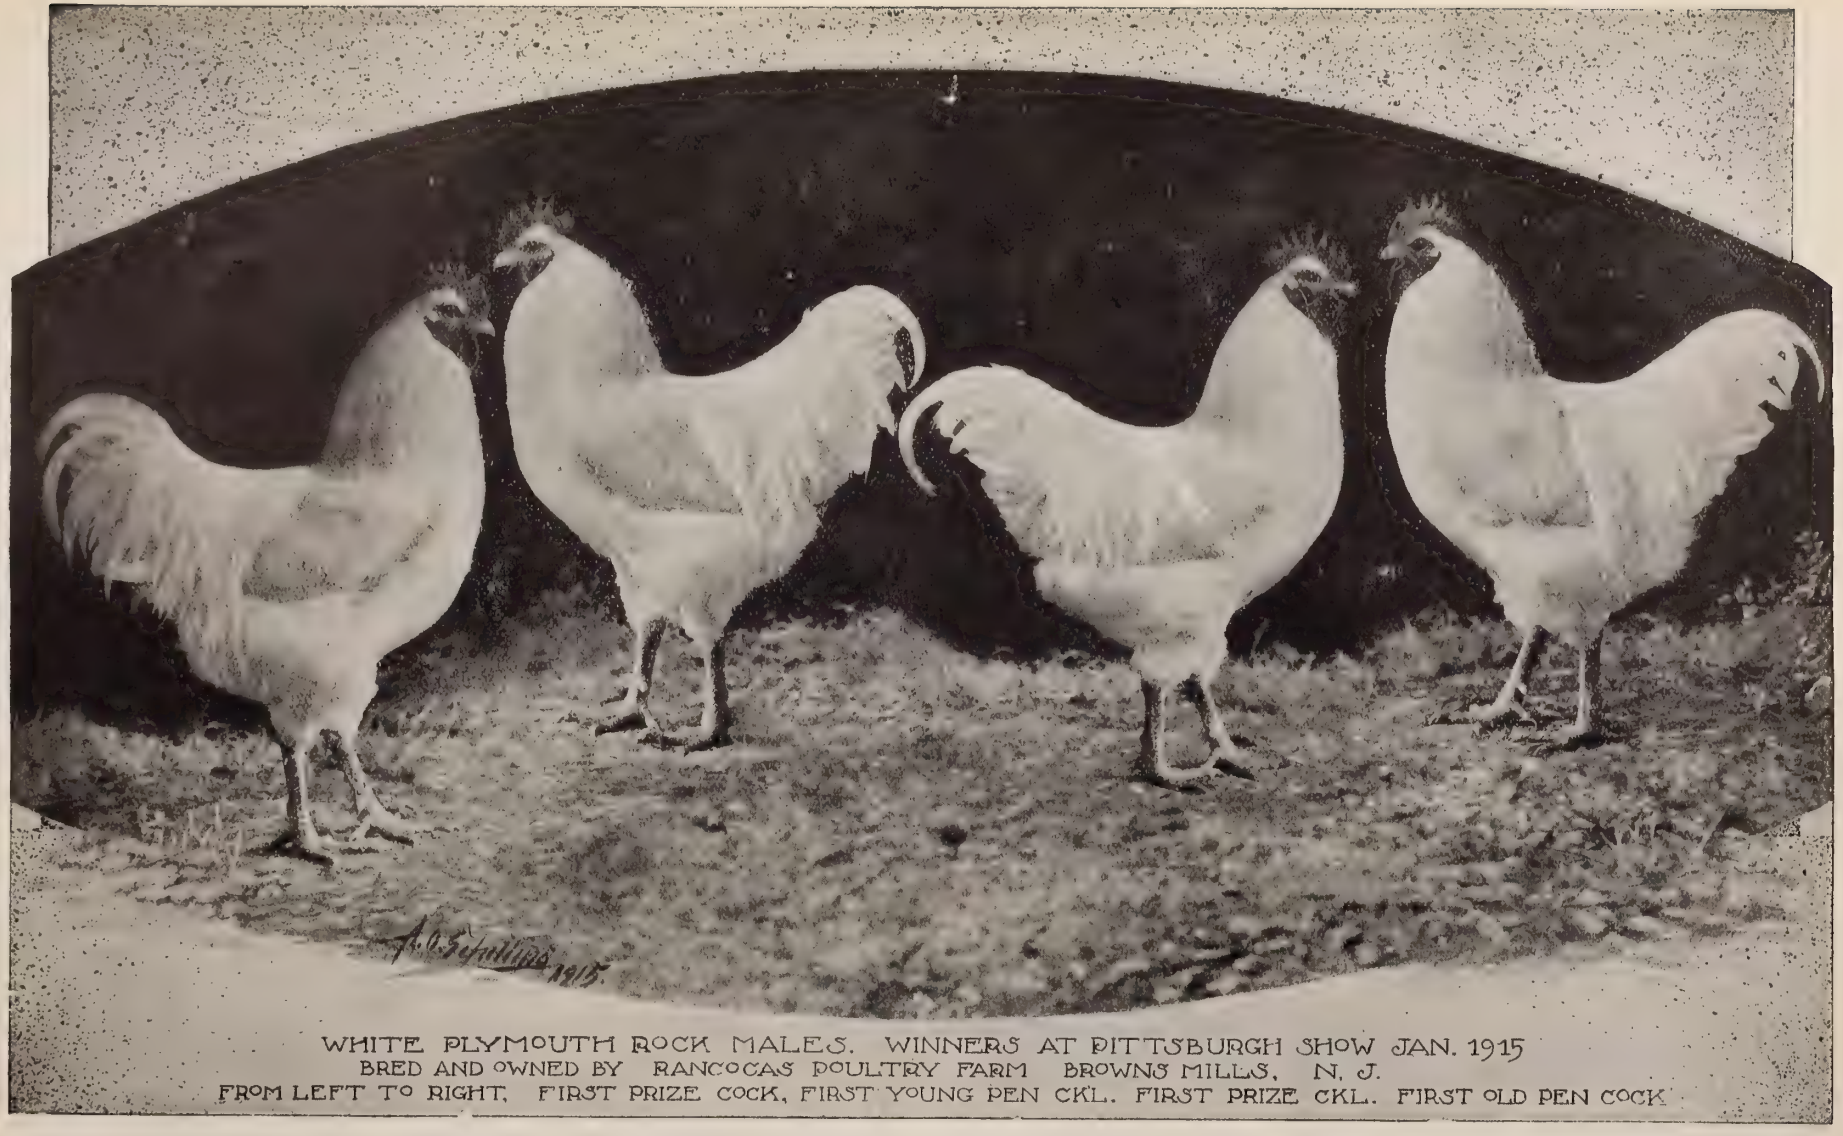
The East is the home country of the Rhode Island Reds and in the east one sees the birds that set the fashion in Reds for the world. From the opening fall fair at Syracuse N. Y. to Madison Square Garden the winners were of an even shade of red throughout; yet because of the breeding changes gradually going on, the exact fixed color has not arrived and one finds even colored birds ranging from medium to dark red.

At Syracuse, cocks were in poor condition, but an even shade between medium and dark predominated.

In the Single comb classes; 1st cock here was second at Buffalo later on and lost to a bright brilliant bay red cock just as even from head to tail. A resume of the quality of cocks in the Red classes handled by myself the past season is best served by comparing them in their prime one with another although early winners got the flag to birds of fresh condition in the later shows. Yet some few birds stand out as winners under any circumstances and prove their metal time after time against the best of the land.

Such a bird was 1st, cock at Hempstead L. I. and impressed me as the best cock of the season in S. C. Reds. His last win of the blue was at Pittsburg and just before the Garden show he expired; but I feel certain that in that great show of Reds he would have again proved his worth. This cock was not of the real dark sort, more of a deep bay, rich and brilliant and in shape was nearly standard, being very long and perfectly horizontal without an appearance of lankyness; he had a medium comb evenly seperated. At Pittsburgh while in fair condition, his many shows had commenced to tell its story and would perhaps have had to give way at the Garden to 1st. cock there 1st, cock at the Garden was a deeper darker red very brilliant and lively in color and had the freshness in tone of this his 1st, show although he was not as good in type as 1st Pittsburg cock which in the same fresh condition was to my mind the best cock handled this season; with the 1st, Garden cock next.

Among the ckls, I found several crackerjacks. 1st Syracuse was of the bright rich bay red, big and lusty and with great promise of maturing into a male of the first water and had the great merit of being even in shade throughout. In 1st Hagerstown ckl. there was embodied fine type and even color with good head points; greenish black tail and good



WHITE PLYMOUTH ROCK MALES. WINNERS AT PITTSBURGH SHOW JAN. 1915
BRED AND OWNED BY RANCOCAS POULTRY FARM BROWNS MILLS, N. J.
FROM LEFT TO RIGHT, FIRST PRIZE COCK, FIRST YOUNG PEN CKL. FIRST PRIZE CKL. FIRST OLD PEN COCK

White Plymouth Rocks as bred by the Rancocas Farms at Brown's Mills, N. J. have made more than a National reputation by winning for years at several of our best shows. Above are shown four (4) of their winning males at the late Pittsburg, Pa. Show where the Annual Club meeting was held. There in a superb class of extra size they won all the six (6) First prizes and several other prizes, making a record that stands unapproached by that of any line we know of. In the bove Artisat Schilling has most faithfully portrayed the birds that were shown and conditioned by the master hand of Superintendent M. L. Chapman.

wings; although at base of hackle was a bit of black; in color he was much like 1st Garden cock with better type. 1st Boston was some chicken but evidently not at his best at Boston; did not show as good type at Boston as 1st, Hagerstown (This 1st Boston ckl. was 1st Chicago) he was not so even in surface color but was a bit stale which accounts for this; yet, even so he was very brilliant and under color was that bright strong lively shade matching well his surface; had a 5 point comb; splendid wing markings and tail and showed great finish; on even terms would have given 1st. Hagerstown a tussle. 2nd, ckl. at Boston had them all for under-color matching surface was a bright rich bay red and very even for under-color was just about the same shade; but in type was not up and also had rough head points; was 1st Hartford ckl. 1st ckl at the Garden was of another sort; quite drak but extremely brilliant and perfectly even in surface with an under-color the richest I ever saw on so dark a male, being very lively and snappy and real red; this ckl was fresh in the field and showed it but lacked the fine finish of 1st Boston although black points were about right but comb and head points were not so clean and smooth as 1st Boston, 2nd, ckl. at the Garden was 1st Springfield ckl. He was big virile well finished bird yet outclassed in color by all of the above mentioned; yet would have trimmed 1st. Pittsburg and 1st Buffalo.

1st Hagerstown; 1st Boston and 1st, Garden cockerels were the three best young males of the season with not much to choose between them although hard to determine the preference considering conditions under which each were shown.

1st Hagerstown hen was almost a perfect type of a lightish shade but even; was an old time winner; among hens the Queen of the circuit was 1st Boston without a doubt although 1st and 2nd, Syracuse had exceptionally rich color and very even yet lacked bone and sustance found in 1st Boston hen. 1st Garden hen was of the Syracuse order and had almost a pullet color but was lacking in capacity. 1st, Hempstead and 1st Buffalo were hens of grand type and fine even color. One hen worthy of mention is the 4th, Boston hen; now 7 years old and winner of 1st twice in succession at Boston as well as at other shows. She is of the bright rich red shade perfectly even; this season failed some in under color. I found no 1st hen of the real dark sort but all were of the even desirable shades with under-color playing the important part in the awards.

1st Boston pullet was without a peer among females of any age in the whole circuit. While not great in bones she was of a classy smooth aristo cratic appearance with good 5 point comb; perfect red eye; A no. 1 black points and a surface color of the softest richest brightest red ever, not too dark yet not light enough to be called medium and with under-color of exactly the same shade as surface and fully as lively. 1st Garden pullet looked almost her twin and thought by some to be the same pullet, yet doubted by others who had seen both; any way to describe one wuold be to describe the other. 2nd, Garden pullet was 1st Hartford and 3rd Boston and of almost as good a color throughout as 1st, Boston but lacked finished appearance and had poor head points. 3rd Garden pullet was 1st Buffalo. This pullet won shape special at the Garden. When shown at Buffalo could have beaten 2nd, Garden pullet but could not have vanquished 1st Garden pullet. At the garden she was not up in show condition and color showed variation although her grand type made her a powerful contender for the place. At Hempstead was shown a string of pullets of one line of breeding that were unbeatable for even surface; strong under color and first class type and from 1st, to 6th, the awards were placed solely on minor defects. This lot were of the darker shade of rich brilliant red.

Never in all the years that I have judged Reds have I found a pen to equal 1st, Boston pen of youngsters. Fully matured and finished like silk; perfectly matched in size and shape; grand head points and black points; cockerel matching pullets in color; the only point not quite up was that cockerel did not show type equal to the pullets; although good himself, was a bit high for his length.

Next to this pen was the 1st, Garden pen which had a male almost perfect in type, but females were not up to 1st, Boston females. In 4th, pen at Boston was a cockerel that I would much like to have seen in competition in the singles; for type he was the best of any cockerel seen out this season and a very rich even dark red in color; to compare him

Mr. Ralph Woodward, Grafton, Mass. Is not only Secretary of the Columbian Wyandotte Club, but is an interested breeder as well who has bred and exhbited many noble winners at our Great Eastern Shows. Here is shown his First Prize Cockerel at the late Boston Show, where he also won the Shape Special. We have known Mr. Woodward and his line for years and it is a pleasure to recommend them both to our readers.
H. P. S.

In Mr. L. B. Ressequie, Millers, N. Y. A new champion Barred Plymouth Rock fancier and breeder has appeared. At the Club Show at Pittsburg, Pa. Mr. Ressequie made a great winning with his line of stock, in one of the largest and best classes ever seen. Above is shown one of his winners and we hope to show others in the near future.—H. P. S.

would require bringing together 1st, Boston; 1st Hagerstown and 1st, Garden cockerels and I believe would have given them all a run for their ribbons. 2nd, pen at Boston was a very even pen throughout but deem them below 1st, Garden especially because of the male in 2nd, Boston.

Rose Combs.

By all odds Champion cock and 1st, at Boston leads the whole procession of Rose Combs paraded this season. A dark bird; very even; rich and strong bone and capacity, he is a living ideal of what a Rhode Island Red male should be; the only criticism that could be offered is that he shades a bit too dark to avoid comments by the ultra-critics.

1st Pittsburgh was much like him in type but shaded a trifle lighter in color; 1st Buffalo was again a dark one but even yet not so good in type as either of the above. 2nd, Buffalo was a mighty classy cock but failed in hackle. This same cock I noticed as 1st, at the Garden.

At Buffalo I found 2 cockerels of the highest class in 1st, and 2nd, 1st, winning on better type; they were of the dark sort and very brilliant and rich throughout; 1st, Springfield in many respects was their superior but had developed a trifle of grey at base of tail; this ckl. won 1st, at Hartford also. He was very typy and finished to perfection with good head points; I noticed 2 splendid ckls. at the Garden. 1st, had type to burn; not having handled them could not say as to color as compared with my classes. 1st Boston was a dandy in eveness of surface but a bit too dark for the aforesaid critics, and he had type to back up his color; summing up would place this ckl. with 1st, Buffalo for premier honors.

It is worthy of mention that Col. Bryant demonstrated in 1st. Boston hen that he still breeds a Red or two worth while. This hen was of a soft even shade and in color was a bright strong red well removed from the dark sort; and had under-color to match as well as a freshness of condition which brought her out snappy and bright.

2nd, hen at Boston was an old contender a trifle better in type but failed in color. 1st Pittsburgh would have taken either into camp; having both grand type and sound color, 1st Buffalo would rank in close with any of them.

1st, Buffalo was a corker in type and color and won both specials at Buffalo; she was at the Garden and won 3rd, there although out of show condition; had to meet 1st Hartford which was also 1st, Boston and some pullet which would please the critics in having the bay color and even throughout; noticed that 1st, Boston was placed 1st, at the Garden.

1st, Pittsburgh pullet was almost the replica of 1st single comb Boston pullet in color throughout except had tail much covered with brown, was shown at Pittsburgh in the pink of condition although just back from winning 1st at Cleveland; had a close shave with 2nd, Pittsburgh which failed in even surface on breast and fluff but had a remarkably fine black main tail. 1st Boston and 1st, Pittsburgh led the van in all around quality with honors a bit in favor of 1st, Boston.

Again quality at Boston demonstrated itself in 1st pen of young, very even; very oblong and horizontal they were splendid specimens of the breed and being well matched were easy winners.

1st and 2nd, pens at Buffalo were in their class and about the same shade; a dark rich brilliant red throughout with the darkest shade in 2nd, Buffalo pen 1st pen at Pittsburgh was a grand pen with the best ckl, ever and well matched pullets although not up to the others mentioned; but male in this pen led all other males in pen classes in all around qualities, strong bone and virility. 1st pen of old fowls at Buffalo was a splendid matched pen for the true type, and held strong in color for adult fowls but would have to have taken 2nd, place to 1st, Boston pen of young.—"Thus endeth the lesson."

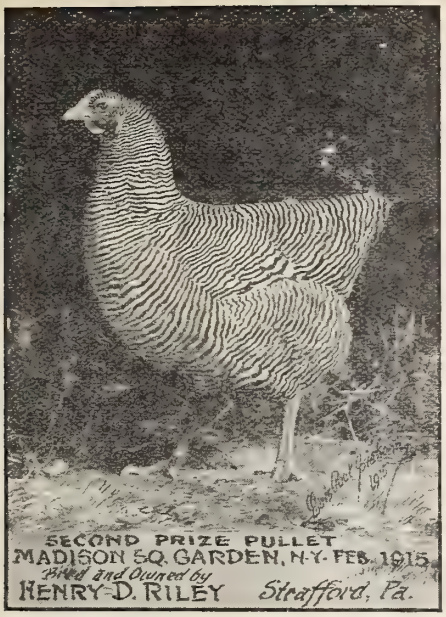
S. C. BLACK ORPINGTONS

Their Beauty and Value—Superior Winter Layers---Rapid Growers and Early Maturity are Their Special Features

by R. N. Barnum

It gives me a great deal of pleasure upon invitation to say a word, practically for the first time in behalf of the Black Orpingtons.

I have been interested with Mr. Chas. Hubbard, our Manager, in breeding these wonderful birds, for the past 10 years, and our admiration and belief in them as a breed superior to any in the world has steadily increased from that day.



Riley's Barred Plymouth Rocks have many years been a factor in this line at our leading shows. His winnings at Madison Square Garden New York of First Prize Hen for two years continued with his records at Indianapolis, Ind. Baltimore, Boston, Cleveland etc. has placed this line as one of the great leaders for the past seven or more years. That this line has been bred to produce is well proven by the winnings made by Mr. Rileys customers at Chicago, Boston, Guelph etc. for years past.—H. P. S.

I believe the poultry fraternity in general will concede that there is no superior grower, conditioner, and all-around poultry man in this country than Mr. Hubbard. He has proven this pretty conclusively in his handling of our Black Orpingtons and I mention this fact not to seek any further advertising of it, but simply to say that when he says that he believes and admires the Black Orpingtons more than any others, it should bear considerably more weight than remarks of similar character which we are continually noting in the papers, and said by men of less experience, and acknowledged ability.

It is a matter of history that Mr. Hubbard was one of the first, if not the first, to handle Orpingtons that were imported by Mr. W. Cook in this country, and we have worked together on them since that day. He has also had experience with every other known standard variety, and when he says, as the writer does, that we believe and know that there is no heavy breed that can compare with them as winter layers, and early spring layers, quick maturity for pullets, it is a pretty strong recommendation for the utility end.

For roasting birds they really have no equal. I have tried them all, and if properly cared for their meat is almost the equal of a turkey, having that peculiar gamey flavor so much desired.

As a show bird and a bird of beauty we think they stand alone, and the readers should not loose sight of the fact that we have bred all other colors of Orpingtons. The Blacks have never had the booming and the amount of printer's ink spent upon them that the other varieties of Orpingtons have had. The Whites had a tremendous boom and the Buffs also. Hundreds of thousands of dollars have been spent telling of the merits of ten thousand dollar hens and pens, but with the Blacks, they have simply come into their own gradually and steadily with with a natural growth into popularity based on their merits alone.

Our business has steadily grown until it is difficult for us to raise enough birds to supply the demand, specially so because every bird that we allow to mature is a specimen worthy to be shown in any show room. Our customers throughout the country report excellent sales and a gain in popularity for this breed every day.

At the recent Madison Square Garden Show we had three men in constant attendance in our Black Orpington aisle, and they were busy from 10 o,-clock in the morning until 10 at night. I am sure after carefully looking over the field that we did as much business, if not more, than anyone else during the show, and insofar as Orpingtons are concerned, almost the entire interest seem to center around the Blacks.

As an example of the gain in inquiries alone, from all countries and all states in this country, we can say that the inquiries this year have almost doubled. In our advertisements the simple printing of our records as gained at one show, Madison Square Garden, has brought us a tremendous amount of inquiries, and when this is taken into consideration it speaks more highly than anything else for the pure merit of the birds. That they have come along gradually, gaining little by little each year, never having what the other varieties have had a temporary boom, it means as we have stated above, that the true value of the breed has been driven home by hard knocks as it were, and at last they have taken the place they deserve at the head of all varieties of Orpingtons, and surely the equal of any breed living. We predict even greater popularity for them in the future.

CONGENIAL WORK IS SUCCESSFUL WORK

Your Success Depends Largely Upon Your Love for the Work. Personal Interest Means Success

By Jas. T. Huston

We are sometimes led into things we do not just like to do, in such instances the results acomplished rarely count for success, but where we enter whole hearted into the task we are about to perform, the results usually are the reverse. Particularly is this so where the keeping of poultry is concerned. Rarely do we find an instance where a man or woman has entered into the poultry business with a deep and lasting love for the work that success has not crowned their efforts.

Perhaps no other form of live stock keeping is being more talked of to-day than poultry culture and well it should be. When we consider the tremendous demand for high grade poultry products, we wonder that years ago this question of more and better poultry was not more widely agitated.

In every city, town and hamlet, the demand for better poultry has become wide spread, with the result that the consumer demands and insists that his eggs shall be of the best quality and that the fowl for consumption shall be of a superior grade. With this demand comes the question of supply, and here we note that the opportunities thus presented offer a wide field to the one who by experience is adapted to the work, success depending not only on ability, but on a deep rooted love of the work at hand.

It is not our intentions to enter into the successes, and failures as well, made by many in taking up poultry culture as a livelihood, but rather to impress those seeking opportunities that success is bound to follow those who make the start rightly.

"Start Right" and you are likely to continue going right. "Start Wrong" and failure grasps you before you have gone very far. The starting right can only be accomplished by the one who beforehand has made a careful study of just how to begin and this knowledge is best observed by experimenting with a small flock.

Some years ago a busy city man determined that from a small flock of hens which came under his notice and were proving highly profitable to their owner that he too would enter the poultry business, deciding that if this small flock were so profitable, that a large flock would reap him big profits; accordingly, he invested his surplus cash in a large ranch in a Western State, in one year's time he discovered his mistake. Unlike many failures, this man had learned to love the work and seeing his mistakes, began over again, starting where he should have at the beginnig with a small flock and growing with experience. To-day this breeder has a model egg farm, and while not large, is bringing him a nice income. These are the real examples of success and failure and worked out systematically. We all were taught to creep before we walked, so let us use the same reasoning in our efforts towards success in the poultry business. The opportunities are here, but in so doing let every move be made with the object of a permanent success in view.

"Charles D. Cleveland's White Wyandottes, both in his hands and in the hands of his customers, have been winning for years. The above cut is made from an absolutely unretouched photograph. **The winnings at Buffalo were 1st cock, 3rd and 4th hen, 2nd cockerel, 3rd Young Pen and 1st Old Pen, carrying best display. The competition was very strong".**

The Beautiful Partridge Wyandottes

Their Standard Quality in Standard Qualifications

Color and Markings---New

By Charles H. Wood

Why think of the barbarous European war when I can on invitation talk to the readers of Everybody's Poultry Magazine about the one best variety of poultry,—the beautiful and practical Partridge Wyandottes. I think it was the new Editor of this Journal who once said of me where I could not answer back, that 'I would rather talk about chickens than law,' and he evidently believes in stimulating my predilection.

It certainly was with pride that we believers in Partridge Wyandottes walked down the aisle in Madison Square Garden last February and saw a line of our birds that ranked second in number among the eight standard varieties of the great Wyandotte family and thirteenth among all varieties of domestic poultry in the greatest show of America. It speaks unerringly of the ever-increasing popularity of this dual-purpose variety;—dual-purpose in the sense of being both good to look upon and practical to keep,—dual-purpose in that the females are strong layers of rich brown eggs, especially in Winter and both male and female are unequaled as dressed or market poultry

Now that the standard of perfection has been revised and rewritten and is probably settled for ten years at least we need to consider how to breed for perfect specimens and have them conform to a reasonable interpretation of that standard.

Color seems to be the great stumbling block, not only to breeders but to show judges as well. Indeed it has struck me that the judges need quite as much education as the breeders. The top color of the Partridge male is now described as "Rich brilliant red." In looking over the work of some judges it has struck me that they ought to take lessons from someone who knew at least something about colors and shades. "Rich, brilliant red" ought to mean quite a definite shade and it certainly ought not to mean on the one hand a color so dark that at a little distance it looks almost black nor on the other a color pretty well bleached out and shading well into orange or even lemon. When I began to breed Partridge Wyandottes, years ago, the males were quite generally of the dark, smutty sort but now the pendulum has swung the other way until there is danger of reaching the other extreme. The dark male was bad enough but he had the merit of consistency of tone, while the male with a hackle light red near the head then shading into an orange near the ends of the feathers and forming a distinct collar of the latter around his neck, bright cherry on wing-bows and with a light red saddle is a joke, except to some show judge who has the power to distribute the prizes without the ability to judge the birds.

My ideal male is "rich" in color,—he is brilliant in all both words imply. He is even colored from his head to his tail. Though a trifle darker on the back, all is a harmonious shading of the"rich brilliant red" and when his hackle is pushed back upon his saddle the blend ought to be perfect. The dark stripe in the feathers of the back is often overlooked but ought to be as distinct as possible. I like to see a few feathers on the side of the breast slightly tipped with brown and a little brown in the fluff for these mean the bird will sire both good males and females when properly mated and single-mating is the only system that should ever be practiced with Partridge Wyandottes. In undercolor I want a soft slate or grey, free from positive white. By some judges it is claimed that is necessary to have white in the undercolor of breeding males. Practical experience proves them wrong to a certainty and it is neither necessary or desirable to have a white undercolor, though there are many features worse than this in a breeding specimen and if the bird is otherwise good it can be corrected by a careful selection of the females.

Much the same confusion is found when the female is considered. What is "mahogony brown?" If you attempt to say it means the color of mahogony then we find that there are very many shades of the wood depending on the finish as well as the age and condition. But it certainly ought to be a reddish brown and here again there has been a tendency to breed to dark, so dark indeed that there has been but little contrast between the black penciled markings and the ground color of the feather. The bird had to be handled to see her markings and at a little distance she appears a solid colored bird. In such a bird the black pencilling almost universally shows a green sheen which is very objectionable and ought to be severely cut by the judges though many of them pay little attention to it, if indeed they even recognize the defect. The ground color of my ideal female is a soft brown with a decidedly redish cast showing through it. On this the penciled markings show very distinctly and you have a bird of beauty when seen in the yard, of marked individuality and one that in unnecessary to handle to see and appreciate.

Do not go to the extreme of losing the reddish brown in your search for contrast for of course a dust colored ground will offer great contrast with the black penciling.

At one of the large shows this past season a pullet was placed by the judge, of just this latter type. Her markings were very clear but the edge of every feather was ashy in shade,—mossy a breeder would call it. The bird ought not to have been noticed and the judge ought to have realized it.

Given such birds as I have described and you are sure to breed attractive chickens that very closely fit the requirements of our standard, reasonably applied. To my mind, however, "Handsome is that handsome does" and the Woodcrest Partridge Wyandottes have to pay their board bill with eggs and meat. I do not hatch my chickens particularly early but every year my pullets prove fine winter layers. This past February 200 Partridge Wyandotte pullets layed 25 per cent more eggs than an equal number of pullets composed of White Orpingtons, Silver Campines, and Wyandottes produced under like conditions during the same period of 1914. Not only do they prove fine layers but they thrive on far less feed than almost any other breed. And so profit comes at both ends of the line.

As dressed poultry I have never seen anything to rival a properly fattened Partridge Wyandotte. With the very full breast characteristic to all Wyandottes, their dark plumage seems to impart to the carcass a deeper, richer old gold color than has any of her sister varieties.

Our markets in the east are partial to yellow-legged, yellow skinned birds and the Partridge is a joy to both producer and consumer when offered in these markets.

I do not commend them as broilers on account of the dark pin-feathers but as soft roasting chickens of from four to seven pounds in weight they justify the highest praise. And so in closing let me say that for me a bird with a beauty of plumage unsurpassed, a tractable disposition, hardiness, productiveness, easily kept and unrivaled as dressed meat fills my ideals in domestic poultry.

America's Premier Table Fowl

Cornish Quality---New Standard Weights---The Only English Variety with Yellow Flesh and Legs.

By John W. Ward, Jr.

"Any "boom" or poultry movement of wide area that will direct still greater attention to "surperior table qualities" in domestic poultry, is to be welcomed heartily on this side of the Atlantic."

The above, copied from an very intresting editorial in the February

"American Poultry World" seems to be the sentiment of poultrymen in general, the big breeder, the "specialty" man, and the "back-lotter," in the United States today, and is the greatest reason for the way the Dark Cornish are being taken up, boosted, carried on the very crest of a great wave of popularity for better table poultry in this country today for the Cornish are not only America's, but the Worlds Premier Table Fowl.

As a strictly market breed for meat, the Cornish stand today without a peer in the domestic poultry world. Cornish have far more meat, of better quality, tenderness and flavor than any other breed in existance, for food feed to a Cornish goes towards the making of a great carcass, almost rivaling a New England turkey in size, which in other breeds goes toward the making of feathers, that is, the growth of same, and not actual meat.

Deep chested, the breast in many cases coming out beyond the breast bone, that is the breast meat, giving the breast bone a "set i" appearance, they have perfectly wonderful breasts, even when young, making them the best of broilers. Muscular in wings and legs we find a lot of the tenderest meat on the wings and "drumsticks" and even on the back of a Cornish, mark this, for it is peculiar to the Cornish, and the Cornish Fowl alone, one finds more meat of the best quality then on any other bird in the domestic poultry world today. Feel a live Cornish at a show and be convinced. The "oysterbone" is enough for one mouthful, when oftentimes in any other breed you have to hunt to find same. On the very back itself there is meat. The Cornish are to the poultry world as a table fowl, what the Devon cattle are to the cattle world as the greatest beef type.

The new standard weights for Dark Cornish will be cock 10 lbs., hen 7½lbs., cockerel 8lbs., and pullet 6 lbs., and it certainly is a mighty poor Cornish male, improperly fed and greatly undeveloped that will not weigh the required 10 pounds at twelve months of age, and mighty lean female that will not weigh seven and one half pounds at the same age. The above standard goes into effect shortly and through the weights for chicks, cockerels and pullets, are about right for we generally think of a mature cockerel or pullet being about nine to ten months of age, the weights for adults are none to large for Cornish male birds very often reach 12 pounds in weight and we have seen them register 13 and 13 and a half pounds, and females at 8, 9 and 9 and one half pounds, the winning hen at Madison Square Garden this year weighing 9½ pounds right in the showroom after a week on the ocean coming from England with only one days rest in America before being put on the show-bench.

The above are "finished" weights it is true but we can say truthfully that Cornish are fit to eat from the time that they are six weeks of age, at which age they should weigh a pound and half, until they have many grandsons and grand-daughters running about your yards. You will never have any trouble with any decent method of feeding to have the Cornish reach the weights given above, nor will you have trouble to get the Cornish as broilers to weigh two pounds at eight weeks of age.

Too, Cornish are the only breed, mark that statement for it is one where the word "if" does not enter, that can be taken from free range after they reach the age of eight weeks and be dressed for maket without further fattening, or preparation for while in other breeds, all the American class breeds especially, you will find a keel like a yacht sticking out with tough skin drawn over same, when you take a Cornish from free range, you will find the bird ready to be killed and dressed, with breast, wings and legs developed, all ready for the most select critical market.

Farmers, for farmers p r o d u c e most of the table poultry in this country today, breeders, fanciers, " back-lotters" for a market bird the Cornish cannot be excelled nor equalled.

They are the only bird in the English class, the only bird that the English people have ever given us that presents when dressed a yellow carcass, and yellow legs, two things that anyone catering to a high class American market must conform to, and are as we said before in a class by themselves.

Give them a trial. Be a "live wire." Have something better. Be convinced.

Ed. Note—Mr. John W. Ward, Jr., Pennington, N. J. Is the National Secy. and Treas. of the American Cornish Club.

Annual Meeting—American Barred Plymouth Rock Club.

The Annual Meeting of the Club was held at the show of the Poultry Exhibition of Pittsburg, Thursday, January 21st 1915, with 18 members in attendance. Officers for the coming year were elected as follows: President, M. W. Baldwin, Sioux City Ia.; Secretary-Treasurer, Henry D. Riley, Strafford, Pa.; Vice President, C. E. Spaugh, Ind., E. B. Thompson, N. Y., W. S. Russell, Cal., W. E. Bright, Mass., Jno. Pringle, Can., W. L. Robinson, Mich., J. H. Seeton, Ohio. Executive Committee, H. P. Schawb, N. Y., C. H. Welles, Conn., E. C. Branch, Mo., Victor Badley, Mass., C. N. Myers, Pa., R. L. Simmons, N. C., R. J. Walden, Md.

Among the most important resolutions passed, was one in which it does not require three members to compete for club ribbons, but they may be awarded without any required number having to cmpete. $25.00 was awarded to the five States which enrolled the most new members the coming year, to be offered at the Show voted the State Meeting; also $50.-00 to go to the show holding the next Annual Meeting, to be offered for Specials. The Secretary was authorized to issue the Club Annual this coming spring. More than 400 new members were duly elected to the Club.

It is the duty of every Barred Rock exhibitor to support the Club which is boosting their breed. Not only can a great deal of good come to them by membership in the Club, but by lending their support to the Club, they can help in many ways to bring the Barred Rock to the notice of all fanciers. The Club list stands among poultrymen as a directory of who is who in the Barred Rock world, and helps to make you known and to bring your birds before the public. Our handsome ribbons are offered at nearly every show in the country, and the Club Cup in many States, at the shows selected by the State members. The Club publishes a large catalogue every spring, which contains articles written by our leading poultry breeders, and which are of great value to the beginner, as well as of interest to the old time breeder. The annual dues are $1.00, which includes initiation fee. I will be very glad to send any one application blanks or to receive their dollar for membership, which will entitle them to all privileges of the Club at once. Henry D. Riley, Secretary-Treasurer, Strafford, Chester Co., Pa.

DAVEY CROCKETT.

Champion White Wyandotte Male
Pittsburgh Exposition, 1913

This male gives the type of the Wyandottes, as bred by W. Scott Brown, West Newton, Pa.

Wilburtha Farms S. C. White Leghorns are bound to become as popu lar as their Columbian Plymouth Rocks and S. C. Buff Leghorns, their seasons winnings particularly those made at the Chicago Show, where t he above bird won First Prize. He also won First Prize at the Indianapolis, Ind. Show. This illustration was made from an absolutely unretouched photograph, being true to llfe and showing this magnificent specimen, just as he is. His size and shape with most wonderful style we have never seen beaten, this with a near ideal head and beautiful carriage make him one of the best ever. Mr. Geo. Kerr the Manager handles this line and we are sure to always see their birds shown at their best. The Owner Mr. Chas H. Fisk, is to be congratulated on the record his birds have made this season.—H. P. S.

OUR GUARANTEE.

We guarantee every subscriber against loss due to fraudulent misrepresentation in any display advertisement appearing in Everybody's Poultry Magazine providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in Everybody's Poultry Magazine and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it comes.

SUBSCRIPTION PRICE.

Fifty cents the year. Three years for $1. in U. S. and Mexico, Canada 25 cents per year extra. Foreign countries 50 cents extra.

A Renewal Blank will be inserted when sub. expires.

ADVERTISING RATES ON APPLICATION.
SAMPLE COPIES sent free to all interested Subscription Agents wanted.

Manuscript and copy for change of advertisement must be in our hands promptly by the 10th of the Month preceeding date of issue. New Business can be accepted to the 20th but no special position can be assurred.

ANNOUNCEMENT

In Everybody's Poultry Magazine, it is our aim, mine, and those associated with me to issue a monthly Magazine that will prove wholesome, reliable and a benefit to the fancy, its breeders, and to every poultry interest. Our policy ever shall be broad and a liberal one, based solely on the good and welfare of all, with prosperity and success ever in view. Our first and highest aim is to publish a Worthy Magazine, that will be a credit to ourselves, and the great industry we represent. On this platform we hope for your support and for the success we are entitled to.

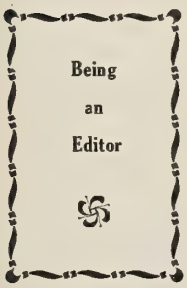
My associates require no special introduction at this time. They are all well known men who have made poultry their life-work. They are Breeders, Judges, Artists and Professors in poultry work, able men, and brilliant writers, who will devote their best efforts to the general success of "Everybody's" and its readers. Their personality and influence stands for the best there is in Poultry Culture, for Progress and for a Greater Success.

We Hope thus to ever merit your support, and that we may well fill that Fate Carved Notch successfully and with credit to all. I remain

Yours very truly,
Henry P. Schawb,
Editor and General Manager.

Rochester, N. Y. March 15th 1915.

"Everybody's Poultry Magazine" is the successor to Poultry Fancier, which succeeded Fancy Fowls, Poultry Monthly and some other, so we are Young and New in name only. We have no apologies to offer for the past, that only concern us to the extended, that we may retain the friendship of our predecessors, and of their friends as well. Our interests, and yours, are in the future, and we are looking ahead to the days when we can be of a greater service to you, and of greater value to every interest allied with poultry and its productions.



This being an Editor is not all that it is cracked up to be, we have learned this early in our experience, for we already feel the weight of responsibility placed upon us. But we are going to do our best, stay right on the job and with the able assistance of others will make this a live interesting magazine for all. We have in mind several features, that will be introduced when fully matured, and in the mean time, we wish our friends to tell us, what they think of us, and to offer any suggestions they may have that would tend to improve our worth.

At this time we feel just like we did 24 years ago when we entered our first poultry show, as a judge, we were never very easily frightened, making a go of that, we have hopes of the same here, now as then, we are going to do our full duty as we see and understand it. Neither asking nor giving favors, just doing our plain duty, to and by all.

Year by year the demand for more and better quality poultry increases, with prices high and always a special demand for quality the future looks bright. It is up to the breeders to produce more good ones, assuring them greater success, no one has a sound excuse for failure. It is a question if the breeders are really producing their best and as many as they can and should, I think they are not.

The system of mating commonly used is not conductive to best results, matings are often made without a real purpose in view, with a chance taken on results. In most cases you may as well go up against a three shell game with hopes of winning, as to hope to produce the best possible from such matings.

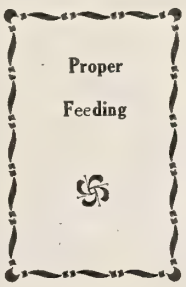
Live quality and breeding value should always have at least equal consideration with individual quality, a bird (male or female) of known parantage quality, has that value, which amounts to far more reproducing than credit is ever given for.

Breeders years ago often mated but a pair or trio or a pen (four females) and seldom more, it was this style of breeding that has made the lines we have to-day and has made possible the popularity as well as the value of our standard bird poultry. Keep what fowls you wish, but in selecting for breeding, be critical, work on lines and their known merit, select and breed for a purpose and in so doing you will inrich your own line and produce more birds of value. All of which will help the future of standard-bird poultry and make your worth and success greater.

There is no best day, week or month to do your hatching. As a rule, this also means—under ordinary conditions, chicks hatched during the months of April, May and June prove the best. Yes you will also include July, for in all parti-colored varieties it is a well known fact that the late birds show the best color. Real early hatching, unless you have the proper brooder and house, is very apt to prove a failure. Our advise is—don't hatch too early but when you do hatch, keep them a growing.

We could cite instances almost without number of leading winning birds of their day, at mid-winter shows, that were not hatched until June 10th and later, from this is quite evident that the proper growing is more important than the mere question of time of hatch.

To the market poultryman who aims for early broilers and to the breeder who wishes early fall layers the above will not appeal. The earlier they hatch the better for them, there is reason in this, they also have an equipped plant for their purpose and can hatch and raise chicks any month of the year. The poultryman who raises high grade Standard-bird stock breeding and exhibition purposes is the particular party we have in mind in this, and beneath it is the one purpose to impress strongly upon all the value of careful feeding and growing of their stock.



The feeding questions always has, and probably always will be one of special interest. That there is more than one Right way has been amply proven, conditions vary greatly, so do climate, then there are also other important factors, all of which bear on the results obtained. The plan that will insure best results for some, and in some sections, will not prove the very best in others, then for it will be for the breeders to try and to experiment and to adopt and follow the plan that proves best for them.

Breed and variety also should be considered, just as they differ in characteristic, they differ in likes and requirements. Most any hen will live on corn alone or on wheat and do fairly well, but they will not give the expected results, nor these they are capable of, ninety-six out of ten hundred hens have the inherit quality to return a substantial profit if rightly fed and kept and it is for these returns that the breeders should work. If we could but increase the average laying quality but ten per cent. and it can be done. It would mean upwards of Ten Million Dollars per year to the poultry breeders of this country.

We have arranged with Professor H. R. Lewis,

of the New Jersey Experimental Station, an acknowledge expert on foods and feeding to write several articles along this line and on the subject of feeding that should prove of special interest and value to our readers. We are going to give you the best to be had in articles and poultry literature, all for you to profit by.

The A. P. J.

In servering my connection with the American Poultry Journal, it was almost like leaving home. My great many years of active connections with the A. P. J. were some of the happiest of my life and I will always have a deservidly kindly feeling for the grand old A. P. J. To Mr. Jas W. Bell, President and Editor we wish to pay our particular respects to let him know I appreciate all he has done for me in so many ways and the opportunities he gave me. I shall also always have a most kindly feeling for my associates in the Journal Messrs Eisert, Ward, Stahauser and Dr. P. T. Woods, wishing them well, as I know they do me.

W. H. MANNING.

Mr. W. H. Manning, Saratoga Springs, N. Y., owner of the Turtle Point Poultry Yards devoted to the breeding of S. C. Black and Silver and R. C. White Leghorns. Mr. Manning has for three years been Superintendent of Poultry at the New York State Fair, where his successful work has made this one of the three largest early shows of the country.

The A. P. A. Nominations.

The nomination ballots have been counted, showing the following results.

For President

Mr. E. E. Richards	575
Mr. E. B. Thompson	205
Mr. A. A. Peters	100

For First Vice President

Mr. A. A. Peters	313
Mr. Jos. Russell	228

For Secretary

Mr. S. T. Campbell	918

Time of Holding 40th Annual Meeting

Second week of August	284
Third week of November	275

Place of Holding 40th Annual Meeting.

San Francisco	457
Detroit	257

Mr. E. E. Richards for President

We believe that when the Election Ballots go out, they will only contain the names of one candidate for President, and that will be Mr. E. E. Richards of Iowa.

President E. B. Thompson has served two terms, and while we regret to see him relegated to the ranks, it is his personal wish and desire that we must respect, he has given faithful service that will always bear influence on A. P A. matters, his tensure of office was one of harmony and up-lift the effect of which has done more good, then will be realized for some time to come. Historys pages can well refer to President Thompson as the "Great Harmonizer" and we feel assured he will have due credit for his long, faithful and successful administration.

The Great West now proposes a candidate in Mr. E. E. Richards who received 575 votes in the nomination count which was over half the total votes. Mr. Richards is an ideal candidate and we hope for his election by an unanimous vote. We all call him "Dick" now, but after we elect him presume it will have to be "Mr. Richards not that he will be any different, but out of respect to the office. Mr. Richards is in every way well fitted for this office, for many years he has taken an active interest in A. P. A. affairs, he is sound and has the unlimited confidence of all who know him.

For Vice President

Here we have two candidates both able and both well qualified to fill any position with credit and honor. We can hartily indorse either. Make your own selection, it will be right either way.

For Secretry their is but one candidate, (as there should be) Mr. S. T. Campbell, Mansfield, O. Mr. Campbell has served for several years and his record for successful and faithful service stands unaproached. The A. P. A. requires his service for time to come.

Time of Holding the 40th Annual Meeting and Place.

San Francisco received 200 more votes than Detroit for Meeting place. We beleve that San Francisco with its Great Panama Exposition has good reasons in expecting the A. P. A. to meet there, conditions favor this and it has been the general impression for a year or more that San Francisco should have the 1915 Meetng.

Thousands from every section of the world will visit the Exposition and by meeting there poultrymen can have this same advantage of seeing an Exposition display that has never before been equaled and is the opportunity of a life-time. Several states have, or will make appropriations for for the poultry display there and it does seem that we, a Poultry Association, should indorse this and approve it by voting our meeting there.

California and its climate is little known to us of the East and Mid-West so that any plan that would induce people from these sections to make the trip "To see America First" would be beneficial in a general way. Nothing is too good for the poultryman.

If the meeting goes to San Francisco, as I hope it will, I also hope the members will vote to hold this meeting the Third Week of November. The poultry Exhibit will be on then, with this the meeting there should be enough attractions to insure the largest meeting and the Greatest Exhibit ever held.

Beneficial Birds.

An interesting and valuable study has been made by the United States Biological Survey of the birds which destroy harmful insects and weed seeds and otherwise are beneficial to farmers and fruit growers. Whether a bird is beneficial or injurious depends almost entirely on what it eats. In the case of species which are very abundant, or which feed to some extent on the crops of the farmer, the question of their average diet becomes one of supreme importance, and only by stomach examination can it be satisfactorily solved. Field observations are at best but fragmentary and inconclusive and lead to no final results. Birds are often accused of eating this or that product of cultivation, when an examination of the stomach shows the accusation to be unfounded. Accordingly, the Biological Survey has conducted for some years past a systematic investigation of the food of those species which are most cmmon about the farm and garden.

Within certain limits birds eat the kind of food that is most accessible,

especially when their natural food is scarce or wanting. Thus they sometimes injure the crops of the farmer who has unintentionally destroyed their natural food in his improvement of swamp or pasture. Most of the damage done by birds and complained of by farmers and fruit growers arises from this very cause. The berry-bearing shrubs and seed-bearing weeds have been cleared away, and the birds have no recourse but to attack the cultivated grain or fruit which have replaced their natural food supply. The great majority of land birds subsist upon insects during the period of nesting and moulting, and also feed their young upon them during the first few weeks. Many species live almost entirely upon insects, taking vegetable food only when other subsistence fails. It is thus evident that in the course of a year birds destroy an incalculable unmber of insects, and it is difficult to overestimate the value of their services in restraining the great tide of insect life.

In winter, in the northern part of the country, insects become scarce or entirely disappear. Many species of birds, however, remain during the cold season and are able to maintain life by eating vegetable food, as the seeds of weeds. Here again is another useful function of birds in destroying these weed seeds and thereby lessening the growth of the next year.

That the good done by birds far exceed any possible damage is proven by an estimate made a few months ago by agriculture experts of the loss to crops caused by insects of various sorts which are the natural food of many species of birds. This damage was estimated at between $200,000,000 and $250,000,000 annually. These insects would have been exterminated or at least enormously reduced had it not been for the wholesale destruction of bird-life in this country in the past half-centruy. In reality the farmer has no better friend than the birds.

Our Bird Department.

The bird question has always been one of special interest, so much so that we will have a Bird Department in "Everybody's".

For this we ask special articles and contributions of interest and value. Bird life, habits, food etc, is a wonderful study, the better we learn to know these creatures, the more we will enjoy their song and appreciate their fine worth to us in so many ways.

Build a bird house, build several, place them in your trees and invite them to come and live there, they will make pleasant neighbors and the best of friends.

Eggs by Parcel Post.

The shipping of eggs by Parcel Post is not only the fad, now-a-days, but has come to be the correct way. At the Rochester, N. Y. Post office on March 10th 138 dozen of eggs were received and delivered in the city, with but one egg broken in the entire lot. All packages were opened for inspection with good result. One of the packages contained 12 dozen eggs, and the cost of sending it was but 29 cents, about 2½ cents a dozen.

Eggs for hatching properly packed should go with perfect safety according to this, we believe they will receive as gentle handling as the express companies give, Uncle Sam also delivers regularly and to thousands the express people don't reach. This is worth trying.

Mr. T. E. Quisenberry of Mountain Grove Mo. has accepted the appointment as Superintendent of Poultry at the Panama Exposition.

Mr. Quisenberry has been director of the Missouri State Experiment Station for some years also Secretary and Superintendent of the Missouri State Show for 10 years. Mr. Quisenberry is grandly qualified for this position, he has always been a leader, a active man, who has "Done" things. We consider his appointment the best that could be made.

Exports of Breadstuffs.

The exports of breadstuffs from the the United States in January totaled $55,687,000, which was $44,000,000 more than for the same month in 1914. For the same months ended with January exports of this character were $294,615,000, against $106,443,000 for a like period of the preceeding year. These figures show the growing demands of the old world upon our food supplies. They also give concern to the authorities at Washington and elsewhere, who fear the effect of continued strain upon American resources of this kind. How to deal with the situation is becoming a problem.

WHITE DIARRHEA AND WHITE WHITE WYANDOTTES.

There are few, if any, who have not experienced losses, and in many cases total failures, from this dread disease which takes off baby chicks during the first two or three weeks of their life by the scores, hundreds and even thousands, and has caused the failures of many who might otherwise have succeeded. Examination has proved that many flocks are infected with this dread disease and that it is carried by and transmitted from the hen to the chick through the egg.

The Connecticut Agriculture College has instituted a blood test by which the infected hens are detected and Mr. F. B. Williams, of the West Mountain Poultry Yards, of Naugatuck, Conn., the noted White Wyandotte Specialist, who is always up-to date in his time, was quick to see the enormous benefits (baby chick life insurance) to be derived from this test, and was one of the first to have his flock tested, and reports that results are very gratifying in that he has better hatches with average strong chicks with no signs of diarrhea the total losses from all causes being only two to five per cent. and some chicks weighing eight ounces at four weeks old.

Mr. Williams has four hundred tested breeders. See his advertisement is this issue.—J. T. H.

BEAUTY AND UTILITY
WHITE WYANDOTTES

Regal White Wyandottes have a magnificent show record and this record was made by birds that have the vigor and stamina to reproduce themselves. My nine years record at the New York State Fair is forty-seven blue ribbons out of a possible fifty-four. These winnings were not accidental but prove that my line of breeding is correct. Our Canadian climate is severe and it takes strong rugged birds to thrive and give the desired result.

When you buy eggs for hatching from my pens, you get them from birds that are bred right, raised right and correctly mated. Can you not reasonably expect better success starting with an established strain? If you are not satisfied with the results you are getting, why not start all over again with pure Regal Strain? A few settings of eggs will not cost you a great deal and will prove a good investment. They can be shipped anywhere in American and I guarantee the hatch. Note the following letters from customers:—

Dallas, Texas, Nov. 25th, 1914.

From the setting of fifteen, I had thirteen fertile eggs and about the twentieth day, I hatched out ten good healthy chicks. They were a fine lot and I had splendid luck with them. It is surprising that your eggs should hatch so well after being shipped so far.

Yours truly, Rex Tune.

Los Angeles, Cal., Nov. 4, 1914.

Have twenty-two nice White Wyandotte chicks and am much pleased with such good results. It shows the vitality in your strain to hatch so well after such a long journey. Thanking you for kind treatment, I remain

Yours truly, Dennis T. Murphy.

Exhibition matings (as they run) $5.00 per 15, $9.00 per 30, $12.00 per 45, $24.00 per 100. Eggs from special matings, $10.00 per 15, $18.00 per 30, $25.00 per 45, $50.00 per 100.

RECORD LAYING PENS (DORCAS LINE.)

Pens 21 to 26 are headed by males from females with high records, mated to hens with high trap-nest records and pullets of the same breeding. From these pens, eggs are $5.00 per 15, $15.00 per 50, $27.00 per 100, $50.00 per 200. Utility matings, $5.00 per 50, $9.00 per 100, $17.00 per 200, $25.00 per 300, $75.00 per 1000.

SPECIAL—50 big vigorous, stay white cockerels $5., $10., $15., $20. and $25. each. Pullets $3., $4., and $5. each.

FREE—20 page illustrated catalogue and mating list. It gives full description of my matings for 1915.

Send one dime for the Regal White Wyandotte Book. The information it contains will be worth dollars to you.

John S. Martin, Box D, Port Dover, Canada

THE TURTLE POINT POULTRY FARM

Saratoga Springs, N. Y., one of the Largest Poultry Plants of the East. S. C. Black and Silver and R. C. White and Brown Leghorns a Specialty. By J. H. Eddy.

On a warm March day it chanced to be the writers privilege to visit the poultry plant of Mr. W. H. Manning, which is situated about five miles southeast of that noted summer resort Saratoga Springs, N. Y. In the summertime the road leading to the farm is one of the best automobile and most scenicroads in this section of the state, one getting a panorama view of Saratoga Lake nearly the entire distance.

Upon arriving at the farm we were met by the efficient and capable manager W. M. Anderson, a Cornell man, who has had a wide experience in the care, breeding, exhibiting and judging of fancy poultry, especially the different varieties of Leghorns. In company with Mr. Anderson we inspected the farm which consists of 160 acres of very fertile land situated on the shores of Saratoga Lake. It might be well to mention here that a point of land on the farm which juts into the lake has been known from time immemorial as Turtle Point and from hence the farm derives its name. It is on this point the beautiful and spacious summer home of Mr. Manning is built.

That Mr. Manning the owner of this plant is keenly alive to the interests of the poultry industry and the benefits to be derived therefrom is evidenced by the fact, that for the past two years he has been Supt. of Poultry at the New York State Fair and in that time has raised it from a mediocre show, patronized exclusively by stiring men to the quality fall show of the country. He is president of the National Rose Comb White Leghorn Club. The National Black Leghorn Club. The Saratoga Co. Agriculture Society. The Saratoga Co. Poultry and Pet Stock Assn. Director of The Fort Orange Poultry, Kennel and Pet Stock Assn. besides being a member of the American Poultry Assn. and the National Waterfowl Club.

Mr. Anderson the manager has judged the past year at six large shows including Buffalo, Boston and Madison Square Garden and has never had a complaint registered him by an exhibitor.

Mr. Anderson's experience coupled with Mr. Manning's enthusiasm makes it no wonder that their record is so phenomina and the writer as he traveled over the plant thought that surely this farm has struck the keynote of success.

A large portion of the farm is devoted to the poultry and for this purpose it is ideal when one considers the location, soil and natural surroundings. Running back from the shore of the lake for four or five hundred feet is a level sandy tract of land, here the poultry houses are built facing the southeast, back of the houses is a steep incline, which shelters the building from the north and west winds. These in the winter and in this latitude are quite severe and a natural shelter is quite an essential factor.

The yards extend from the rear of the houses up the hill before mentioned and are thickly shaded by pine trees. Running water is in every yard piped from a resevoir on top of the hill which is fed by natural springs. The springs and resevoir are far enough from the yards so that there is no danger of the water becoming contaminated.

The houses are models not only for the convenience of the employer, but for the health and welfare of the occupants as well and nothing can bespeak this better than the bright red combs and healthy activity of each individual, not a sick bird was noticed on the place . As it was shortly after one when we made the rounds of the houses, the writer could not help being impressed with the number of eggs in the nests or hens occupying them, showing plainly that Turtle Point Farm have developed a prolific strain of layers as well as practically unbeatable show birds.

The attention of the writer was attracted by Mr. Anderson to the arrangement of the dry mash hoppers. These were hung about three feet from the floor resting on a stationary platform thus preventing the hens scratching the litter, which consists of oat straw to a depth of six inches or more, in to them. Every fall the interior of the houses are given a coat of crude carbolic acid this having a great tendency to keep in subjection that greatest of all pests red mites, besides this the fowls and the roosts are frequently sprayed thereby preventing body lice.

After the chicks are hatched and ready to take from the incubator they are placed in colony brooder houses, holding from 200 to 250. These houses are equipped with either gasoline or coal stove brooders, the floors are covered to a depth of several inches with fine dry sand. When the chicks become matured enough to do without heat they are moved to open front colony houses on a side hill nearly half a mile from the plant. This side hill is thickly shaded with pine and underbrush and has a brook running at he foot. It would be hard to conceive of a better spot for the youngsters to grow and develop than right here and when you see the breeding stock in the pens you you can readily understand the vigor and stamina stamped all over each individual specimen.

While the youngsters are on free range they are fed principally wheat but after moving them into winter quarters they are fed equal parts of cracked corn and wheat with a dry mash of the Cornell formula with a slight variation, green food of some form is kept before them constantly. Mangels was being fed at the time of our visit.

To describe this plant and not mention the matings would be to leave out the most interesting part of the article, or at least it would be to the writer. Starting in with the Blacks we were more than surprised at the advancement made. Although we have seen the Turtle Point Farm birds at the various large shows, we were little prepared to see the type and characteristics of the breed so pronounced in the entire flock. Every breeder has a few birds that can win but it is very rare indeed that you see a flock of several hundred all of the same fine quality. The beautiful beetle greensheen so much desired was evidence in every bird. While the yellow legs so much longed for in years gone by were universal here.

In pen I we found Mundy 2nd. This bird has yet to meet defeat. He is the proud son of an illustrious sire and one after seeing him could not be surprised at his wonderful record, having won 1st at Buffalo and Madison Square Garden and this year as a cock repeating the record he made as a cockerel, this in competion with the best birds in this country and Canada. He is mated to as good Black Leghorns females as is possible, included in the pen are hens and pullets that have won at Buffala, Boston and New York, we were particularly attracted to the hen that as a pullet won first at Madison Square Garden 1914. We saw her then and marveled at her many fine points, and we can frankly say that she has lost none, in fact she has improved since she has joined the matron class. Every female in the pen has deep yellow legs and beautiful green sheen to the plumage, as well as low carried tails and good head points.

Pen 2 isheaded by the cockerel winning 1st at Boston this year and up to date the best cockerel of this breed we have seen, true to type, fine low carried tail, with as near perfect legs and color as possible to produce, mated to him are females that have been under the ribbons at the largest shows in the country, this years winning Boston pen are here, four sisters as near alike as peas in a pod.

Pen 3 here we found this years winning Buffalo cockeral a fine bird with a beautiful concove back a forty-five degree tail with abundant sickles and coverts. Mr. Anderson informed us that nearly all the females in this pen were sired by that grand old

bird Mundy. They are a wonderfully even lot, in fact so even are they that it would be impossible for a novice and mighty hard for an expert to pick out the best.

Pen 4. The cock heading this pen won first at Buffalo this year, he is a grand colored bird in every section, plumage, legs, eye, every where he is fine, not only that but he has the carriage to set it off. His mates are ten beautiful pullets equally as good as he.

Pen 5 is headed by a cock that won first as a cockerel last year at Boston, a bird of excellent head points and good color and mated with some grand females.

Pen 6. Old Mundy reigns here, looking as strong and vigorous as a cockerel. When he was first brought before the public he was the marvel of the poultry fraternity, and that he has never been surpassed except by his own sons speaks wonders not only for the bird but the skill used in breeding him. He is well mated to some excellent females and we feel safe in saying that old Mundy's list of prize winners will be increased when this years crop of chicks are placed on exhibition.

The next breed visited were the Rose Comb Whites. This was the variety that made Turtle Point famous and they are still living up to their record of the past. The matings seen here are as fine as we have seen anywhere. Brassiness so common in the Rose Combs of the past is practically eliminated here, in fact in the eight pens we inspected we did not see a brassy bird or one that showed the slightest indication of it. The small neat rose combs, true Leghorn type and low carried tails give evidence that his variety is now ready to take her place by the side of her single comb cousins in the show room.

Pen II is headed by a chalk white-cockerel that was awarded 1st at Boston this year also shape and color special. His mates are all winners at Boston and Madison Square Garden this year. They are beautiful headed low tailed females and we could not help admiring this pen for the excellent type possessed by each individual.

Pen 2 has as its head an extra vigorous cock with a beautiful low well spread tail, his head points including comb, wattles and lobes are all that could be desired. At first glance you would take this bird for a cockerel. Every female in this pen is either a blue ribbon winner or a runner up for the blue and they impress the onlooker as an exceptionly even lot of females.

Pens 3-4-5-6-7 and 8 are all grand matings and it would be hard to choose which one is the best, all the males have been placed under the ribbons in good competition.

While the females are certainly a grand lot any of which are ready to go into any show and give a good account of herself.

In Rose Comb Browns we found four matings, two cockerel and two pullet breeding pens. Here type and color were very much in evidence. This farm has made an enviable reputation on this breed, and the reason they have such a limited number of matings, is that the demand for Rose Comb Whites and Blacks has been so great the matings of some breeds had to be curtailed.

There were two matings of Single

OWEN FARMS BIRDS ARE UNEQUALED

Buff White Orpingtons

ARE CHAMPIONS OF AMERICA

Not a result of two or three years showing with purchased birds, but the result of eleven years careful line breeding from the finest birds in England.

ABSOLUTELY NO OTHER STRAIN OF ORPINGTONS IN EXISTENCE HAS A RECORD TO COMPARE FOR ONE INSTANT WITH THAT MADE BY OWEN FARMS BIRDS.

AT MADISON SQUARE GARDEN, NEW YORK, THE PREMIER SHOW OF ALL AMERICA, IN TIMES SHOWN SINCE 1904.

OWEN FARMS ORPINGTONS HAVE WON 41 FIRST PRIZES.

All other Exhibitors combined have won 26 First Prizes.

White Ply. Rocks

ARE CHAMPIONS OF THE WORLD

No flock of any variety in all the WORLD (with the one exception of the Young White Leghorns) has so clearly established its pre-eminence as has the Owen-Graves-Greystone flock of White Plymouth Rocks.

OUR OWN MADISON SQUARE GARDEN RECORD IN 70 CLASSES SINCE 1901 READS 46 FIRST PRIZES.

All other Exhibitors combined have won 24 First Prizes.

White Wyandottes

Are one of the three best flocks in the WORLD. AT MADISON SQUARE GARDEN, NEW YORK. Since 1906 have won SEVEN FIRSTS in five showings and FIRST COLLECTION TWICE. AT BOSTON SHOW have won FIVE FIRSTS in two showings and FIRST COLLECTION EACH TIME. AT COLISEUM SHOW, CHICAGO, have won THIRTEEN FIRSTS in three showings and FIRST COLLECTION EACH TIME, my December 1914 CHICAGO record of SIX FIRSTS, THREE SECONDS and THREE THIRDS being the best ever made at a national show.

S. C. Rhode I. Reds

Are the BEST MALE LINE in AMERICA today and one of the best female lines.

Have shown at the four best RED shows in the country the past fall and winter and won FIRST COCKEREL EACH TIME, follwed by seven minor places on cockerels. Have won TWO FIRSTS, TWO SECONDS and a FIFTH ON YOUNG PEN. In all have shown ELEVEN different cockerels in making these winnings and EVERY ONE WAS BRED AND RAISED FROM MY 1914 MATINGS. This is why I claim the BEST MALE LINE in AMERICA today. Showed REDS once at MADISON SQUARE GARDEN, in December, 1911, and won THREE out of five FIRSTS. Showed REDS for first time at BOSTON last January and won THREE out of five FIRSTS. The first time in ten years one breeder has made this BOSTON record.

The product of my 1915 matings will make history for customers and myself in 1915-6 shows all over the Country.

S. C. W. Leghorns

Are one of the leading flocks. Carefully line bred for several years and shown for the first time at NEW YORK PALACE SHOW last December, where I won FIRST COCK and FIRST PEN. At BOSTON in January, in direct competition with D. W. Young, I won FIRST, SECOND and THIRD PULLET and SECOND AND THIRD YOUNG PEN.

MY 1915 MATING LIST IS FREE AND TELLS THE WHOLE STORY.

It will tell you that Eggs from my BEST PENS are $10.00 for 15. $19.00 for 30. $30.00 for 50. $41.00 for 75. $50.00 for 100.

And that Eggs from my GRAND SECOND QUALITY PENS are $5.00 for 15. $15.00 for 50. $25.00 for 100.

Order directly from this advertisement and save time. Every Owen Farms customer will receive full value and more for every dollar they send me.

A Limited Number of Fine Breeding Birds in each Variety for Sale at Extremely Low Prices.

UTILITY QUALITIES OF OWEN FARMS BIRDS UNEXCELLED.

OWEN FARMS

163 William St., Vineyard Haven, Mass.

MAURICE F. DELANO, Proprietor. FRANK H. DAVEY, Superintendent.

Victory at Boston, 1915

In competition with the leading eastern breeders and the best exhibit of Barred Rocks ever seen in Boston.

Hawkin's Barred Rocks

Won 1st and 4th cocks, 1st and 2nd hens, 1st cockerel, 1st and 3rd pullet bred cocks, 1st cockerel bred hen, 1st pen. Grand special for best display, $100 cup for Champion Male, best colored male and female and 10 other specials.

GREAT SWEEP AT CHICAGO

the past two seasons, winning more first and special prizes than all competitors.

Choice Breeding Birds for Sale. EGGS From Prize Matings

1 setting, $10.00; 2 settings, $18.00; 3 settings, $25.00. Big Catalogue of the Champions Free.

A. C. Hawkins, Lock Box 44, Lancaster, Mass.

1ST PRIZE PEN S.C. WHITE ORPINGTONS, MADISON SQUARE GARDEN N.Y. FEB 1915
BRED AND OWNED BY
OWEN FARMS VINEYARD HAVEN MASS.

The Owen Farms have this season, better than ever before demonstrated the quality of their several lines, and their ability to win the highest honors at the best shows, for themselves and for their customers alike. Seeing their birds early in the season at Allentown and at the New York State Fair, we in writing them up said—Owen Farms have so far made two big shows, winning well at each, it is very evident, from their birds seen so far, that their line in all of their six varieties, are superior to any they have ever shown. How true this was has been amply proven since, for at the New York Palace Show, Chicago, Boston and finally at the Worlds Premier Show, Madison Square Garden, New York. The illustration above shows their First Prize Pen of S. C. White Orpingtons at the M. S. Garden New York Show, where honors won signify the worlds best quality. The Owen Farms also won First Prize S. C. White Orpington Pen at the New York Palace Show, and at the New York State Fair First Prize on both Old and Young Pens. We regret that we haven't a complete record of their winnings for the season, suffice to say that Mr. M. F. Delano, the owner has shown the quality this year better than ever before the kind that merits every boost we can give him and the confidence and the support of the breeders and fanciers alike. H. P. S.

Comb whites. While this farm has not shown this variety extensively, never the less, where ever they have gone they have been heard from.

Pen 1 is headed by a magnificent cock bird and Mr. Anderson informed us that he had produced some wonderful specimens and when one looks at him and then at his mates, all of which have neat small combs and low carried tails, he will say to himself "Yes: and he will produce some more this year."

The other 9 pens are all fine matings. The male heading pen 5 though is worthy of a mention, he is a fine sound colored cockerel with exceptional head points.

There are two matings of Silver Leghorns. While this Variety is practically new they are one of the most beautiful breeds we have and Turtle Point Farm has established the true Leghorn type and characteristics here as they in their other varieties of the Leghorn family. Blue ribbon winners head either pen. While the females are that soft even color so good to look upon.

So much for the matings, but it would be well to mention what these birds and their ancestors have done in the past. Turtle Point Farm has yet to meet defeat for best displays on Black Leghorns at all the largest shows in the country. In Rose Comb Whites they have won every first competed for this year but two and have never lost display prize but once. This is a wonderful record when one considers the years this Farm has been breeding and showing the different varieties of Leghorns.

ADVANCE OF S. C. WHITE ORPINGTONS IN THE EGG LAYING CONTESTS.

The last report of the National Laying Contest, now being held at Mountain Grove, Mo., shows that for the month of February the silver cup was won by a pen of Aldrich Strain S. C. White Orpingtons entered by one of their customers. As this pen of five pullets laid 113 eggs in February, and there were 75 pens competing, including pens from England and other foreign countries, this is a record to feel proud of.

One of the pullets in this pen has laid 83 eggs in the four months since the beginning of the contest, being the largest number laid by any female to date.

This shows that there is no breed better for the winter laying than this variety, and that the time will come shortly when the efforts of such breeders will bring the exhibition strain up to a par with that of any other variety. The White Orpington breeders of the United States are to be congratulated upon the great advance made in this breed in color, type, head points and utility points in the egg laying strain during the last five years, by careful select breeding.

BUFF PLYMOUTH ROCKS.

Vieheller Brothers Pittsburg, Pa.

Buff Rocks as bred in shape and color by Vierheller Bros., No. 17 Sylvania Ave., Pittsburg, Pa. for several years have been general winners at many of our best shows. We have seen this line at their home and have followed their breeding, which has always been one of intense interest Sound quality, with improvement, has always been the aim sought for. Beside color, we can comment this line for its general shape, which has ever received due consideration. Their good size and station, with extra good long bodies and backs, well carried tails and good heads, has been bred to a feature of this line. Interested breeders should get their mating list, its free. Mention Eevrybody's.

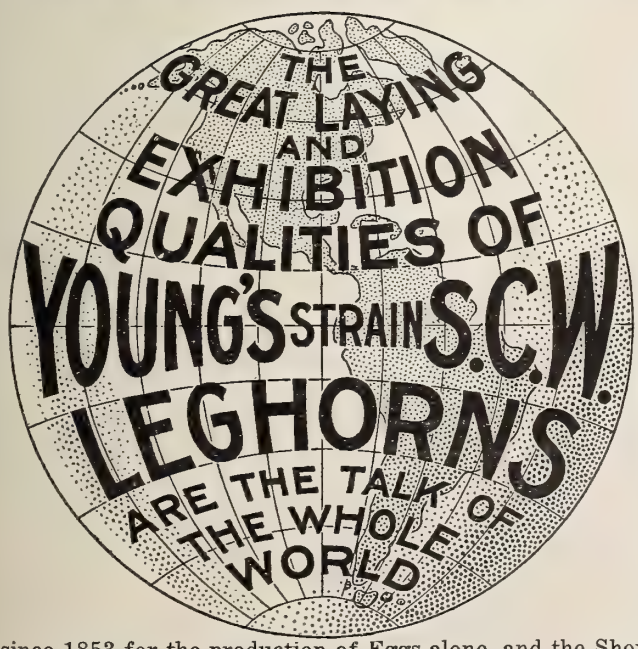
YOUNG'S STRAIN S.C. WHITE LEGHORNS



I Have No Other Breeds.

Again they win at **Madison Square Garden,** N. Y. Every Prize and Special Offered.

Not a bird shown in the S. C. W. Leghorn class that did not come from my Strain direct or indirectly. It was the same at Boston. It was the same at Philadelphia. It was the same at Chicago. It was the same at Baltimore. It was the same at Pittsburgh. It was the same at Buffalo. In fact it is the same from the Atlantic to the Pacific. My individual winnings at**Madison Square Garden, New York, February, 1915,** were as follows: **Cock 1-2-3-4-5; Cockerels 1-2-3-5; Hens 3; Pullets 1-3-4; Pens 2-3. .Best Display** and **Specials.**

Young's Strain is acknowledged throughout the **World** as being the **Standard** of all **Leghorns** and the leading Strain of Heavy Layers. They win for me and my customers as regular as the seasons come. Year by year they have won the **Great Majority** of Highest Prizes at the World's Best Exhibits. They have been bred in line by my family since 1853 for the production of Eggs alone, and the Show birds have simply been chosen from the layers. In fact they are the only Original line-bred strain of Leghorns in America to-day.

Why not come to Headquarters for eggs when you can buy them as reasonable from me as from any other breeder. Hundreds of Grand Cockerels for sale.

MADISON SQUARE GARDEN NEW YORK SHOW

February 12-17, 1915

Twenty-Sixth Annual Exhibition of the New York Poultry & Pigeon Association---Quality Superb---A Brilliant Harmonious Exhibit of the Worlds Finest Poultry

By. H. P. Schwab

With the closing of the Great Madison Square Garden Show the curtain fell, closing also the Poultry Show Season of 1914-1915 which now passes into history as the greatest, best and by far the most successful season of exhibits ever held. From the Williamsport, Pa. Show held in November to this Garden Show the season has extended. Every State, and most every City and section has had its Poultry Exhibit, all of which have been a credit to the fancy and industry, never before have so many shows been held, and never before have they been so large or so good. This 26th New York Show in particular had its features and its special values. It was not the largest show we have seen in New York, but it was unquestionably the best from every point of view.

Birds of superior quality were seen in every class, in several the entire class was of the "Sensational" kind in high even quality, this was particularly noticed in the Barred Rocks, Silver Wyandottes, S. C. White Leghorns, Light Bramhas, Orpingtons, Etc. Several records of unusual value were made, in particular we refer to that of Mr. D. W. Young, in S. C. White Leghorns. Foxhurst Farms, S. C. Black Orpingtons. E. B. Thompson, Barred Plymouth Rocks, Etc.

The arrangements and the handling of this Great Show were all that could be desired. The display was beautifully staged and all exhibits were seen to advantage, there was a harmony of beauty, quality and the best of feeling, all blending in full proportion, which made this success possible. To Mr. C. D. Cleveland, Secretary special mention is due, his ideas have been worked out and have proven their worth in all seen here, he well desrves the best we and all can give him. All active officers of the association, particularly Capt. C. M. Griffing, who has been a fixture here since their first show, all evidently did all expected from them well.

Probably the late dates effected the entries to some extent. Pens in particular being short, still the great building was filled and more would caused a jam and crowded conditions in some sections. Plymouth Rocks with 465 birds shown was the largest class. Wyandottes 415. Reds 251. Leghorns 377. Orpingtons 347. Light Brahmas with 193 birds shown was the largest single class. The total single class entries were 2989 birds. Pens 1080. Pigeons 752. Display pens 250. Display of Ornamental birds 446, making a grand total of 5517 birds shown.

The displays of Incubators, Brooders, Poultry Supplies, Etc. encircled the entire building. Large and small Incubators were seen in operation. Coal Brooder Stoves were hovering thousands of chicks, while the merits of poultry foods and poultry appliances were shown and displayed. The Poultry Journals were all there. The Poultry Fancier being seen for the last time under that name.

Poultry Exhibits were seen here from many States. California was represented by two Exhibitors and most other states did equally well. The breeders of Canada made a great showing and carried off many honors worthy their stock. Never before have so many prominent poultrymen been gathered here, they came from all sections, and they all, without exception, pronounced this exhibit the best ever. Among those we met: Mr. E. E. Richards, Cedar Rapids, Iowa. Dick, as he is commonly known, found the A. P. A. members solid for him for President of the A. P. A. Colonel Hugh A. Rose, Welland, Ont. Joe Russell, Toronto, Ont. J. A. Smith, Iowa. T. E. Hale, Ill. Eugene Smith, Ill. Secy. S. T. Campbell, Ohio. Frank McGrann, R. V. Hicks, C. H. Weller, W. A. Williams, C. N. Myers with Jas. W. Bell of the A. P. J., H. H. Colburn, Mich, F. W. Perkins, Etc. were among the prominent visitors noted.

The Educational Program with lectures, Motion Pictures and Demonstrations were daily features of the show. The entire program is to long to give here, suffice to say that there were from three to seven meetings held daily, that were well attended. The interest shown in these meetings show the temper and inclination of the general publc to knowledge and better poultry conditions, from the crowded houses and interest displayed we feel assured that these meetings were beneficial and will carry with them a most wholesome effect on all those fortunate to have attended.

The practical display of the Certified Farms Co. of New York and their entire exhibit was one of unusual value and interest. President J. C. Punderford and Treasurer Chas. J. Fiske with their many assistants were kept busy showng their up-to-date goods and freely advising these who came to them for information. This Company is showing the way to better poultry. Better prices and better conditions.

The attendance was the best we have ever seen at a New York show, there were over 30,00 paid admissions during the week, daily the people filled the great Hall to see, learn and to buy. Sales without number were reported and taken all in all we can truly comment this exhibit as being truly great and of value beyond our comprehension to the Poultry Industry.

The Flea Banquet held on Monday night was one of the events of the week. A new Constitution was adopted at the meeting held which insures the progress of the Benevolent Poultry Organization. Mr. Chas. J. Fiske was toastmaster and presided in his usual graceful manner, his introductions are original, he has a line on all the "Boys". Among the speakers were E. E. Richards, Reese V. Hicks, D. Lincoln Orr, M. F. Delano, D. E. Hale, Eugene Smith, Judge Balch, Jas. Glasgow, H. D. Riley, Louis P. Graham, Chas. Kearns, F. H. Dillingham, F. E. Gilbert and yours truly.

THE CLASSES AND WINNERS.

Unusual interest was displayed in the classes of Barred Rocks. Never before was such quality seen, there were no fillers, for every bird shown was a credit to the owner. Eveness was the out standing quality noted. We have seen larger clases at New York, but never one that approached this in quality. The best in the world was here and those that did not show had a reason. M r. A. C. Hawkins made a great win at Boston and had his pens mated, and the same is true of Mr. C. N. Myers who did not think best to disturb his matings. Those lines were missed with reason that we can't say of some others. The judging met with general approval. Mr. L. P. Graham made his first appearance here as a Barred Rock Judge and did splendid work with the Cockerel and Hen classes.

Cocks, First: The best Barred Rock Cock we have ever seen or judged, he also won male shape special. He was a strong, bright and fresh as any Cockerel, finished throughout, and of the best possible color and barring surface and under in every section. Head very fine. Eyes rich red, his type with style and finish, narrow barring and the best of condition make him the peer of all. Second fit to win in any company. Elegant shape and strong rich color and barring, fine wings, head, etc. Third. Not fully finished in neck, otherwise equal to second. Shape superb. Fourth a very select large bird, grand under-barring, neck a half shade light, a very commendable bird. Fifth. Very snappy barring and rich blue color, full of vigor and surely one of the very best.

Hens, First—A fine straight barred rich colored hen, the contrast of color superior. She wins female shape special. Wings extra, head and eyes fine. Second—Very fine in surface color, good shape and very cleanly barred. Third—Rather similar to first. Not as well finished. Fourth—A superb hen with select quality, charming in appearance. Fifth—One of the best when at her best. No. 27 looked like one of the best to us. Color and barring superb.

Cockerels, First—A very superior bird, finished, in best of condition and of finest quality in every section. Surface color a rich blue, narrow and evenly barred and of the best possible under-barring. He also won Champion Male, he had no flaws to find. Second—Very close up and like a ll the males winning here. Stands strong and with excellent shape, fine comb and head. Strong eyes and well finished. Third—another of equal value, shape superb. Fourth—One of the rarest, a grand good one in every way. Fifth—In general quality unsurpassed, a fine strong bird. No. 45 (E. B. Thompson) wins Color special, the best and narrowest barred Cockerel shown, was worthy to win Special for best Colored Male, being somewhat unfinished in tail he was not placed, all the placed birds were about fully finished and at their best.

Pullets, First—Wins on her grand color and barring of equal width. The Standard demand for equal barring was produced in the pullet and others seen at this show superior to that seen before. The narrow even barring had the best of contrast and was very clean. Second—Another pullet of greatest merit, color very fine with the best of barring. Third—A sensation pullet in barring, most beautiful under-barring, equal, even and straight. Fourth handsome, but not finished. Color of the best. Fifth—Just a shade dark, barring very even, narrow and good.

Pens, First—Well mated. Male a fine type bird, excellent surface and under, fine head. Females all of fine size and very even quality. Second—Male similar cockerel in first pen. Just as good in every way. Females fine, close to others. Third and fourth Pens, very much alike. All fine quality birds.

The record made here by Mr. E. B. Thompson, Amenia, N. Y., with his "Ringlet" Barred Rocks stand unsurpassed in the history of this great show. Great as his winnings were, they were well earned, he had the goods, and the awards were placed where they belonged. Mr. Thompson has been making records here for 30 or more years, having been a consistent exhibitor and winner. Last year he made the superb record of winning all five prizes on Cockerels, this year he duplicated this seemingly impossible feat and nearly did the same in Cocks, Hens and Pullets. Mr. Thompson won Cocks 1, 2, 3, 5; Hens 1, 3, 4, 5; Cockerels 1, 2, 3, 4, 5; Pullets 1, 4, 5; Pens 1, 2, 3, 4; Champion Males and Females. Shape and Color Males and Females and all Specials offered that he could compete for.

Mr. Henry D. Riley, Strafford, Pa. always shows Barred Rocks that the judge has to consider. His birds shown here were hardly at their best in condition, still they show his rare quality and we fully believe his line superior to those shown in the past. Mr. Riley won second Pullet on a bird of rarest color and finish of barring.

Mr. Robt. J. Walden, Middleburg, Md., won third Pullet on a sensational bird, her under-barring with equal spacing and fine type was never seen better, she was in laying condition and past her best. Mr. Walden has produced many noted winners, but never a better bird than this, if he could only of held her back, a different story would be told.

Mr. Frank D. Hain, Livingston, N. Y. won fourth Cock, he is one of our old and reliable breeders who has a long winning record.

Mr. Robt. McGillvia, Napanock, N. Y. won second Hen, a female of class.

Mr. L. B. Ressequie, Millers, N. Y. won special for best Cockerel shown by a new exhibitor. Mr. Ressequie has made fine records this year at Pittsburg, Buffalo, Rochester, Etc.

Other exhibitors were Walter T. Stern, Haldie Nicholson, W. D. Boileau, Minch Bros., C. Guy Myers, D. Sconcroft, F. A. Starr, Jas. B. Norris, J. A. Cole, Elm Poultry Yards, Robt. Rankin, W. B. Gourney and C. C. Wine.

White Plymouth Rocks.

A larger class than usual and one of extreme quality and worth. Birds in finest condition the feature. The general type with good heads, strong eyes very noticable in the winners and most of the others.

Cock, First—A beauty bird grandly shown, fine eyes, comb, etc. Second—Fine color and good style, with fine shape and best of color. Third—Another strong one, probably not at his best in feather. Condition beautiful. Fourth very fair. Fifth—A royal good one to our mind. Strong, fine size and full of vigor.

Hens, First—Fine shape and excellent condition, wins female championship. Second—Very similar in all ways. Third—Very fine shape and size with the best of color. Fourth—A rare beauty with finest of shape, best of carriage and wonderful condition. Fifth—A good hen.

Cockerels, First—Well balanced, good in all sections, fine head points. Second—Extra fine type, fine condition and a bird of grand quality. Third—Very good. Fourth—Fine. Fifth—A corking good one, has style of carriage with shape and fine condition.

Pullets, First—A beauty, extra size fine long back and snow white. Second—Well finished and of grand form. Third—One of the very best, shape excellent. Fourth—Extra in shape and size, a grand big barrel bird of quality. Fifth—Very good.

Pens—A very nice lot, mating well done. First—Wins on general quality and eveness throughout. Second—Select, a grand lot of birds with every quality to commend them. Third—The Male probably past his best. Females very fine. Fourth—A choice lot of females. Male not at his best. Fifth—A good even pen.

After making a long seasons record of winnings at the Palace, New York Show, Pittsburg, Pa., Etc. The Rancocas Farms, Browns Mills, N. J. wound up the season here by wining Cock 3, Hen 4, Cockerel 4, 5, Pen 3. At the Club Show Pittsburg, Pa. two weeks before in one of the largest classes ever brought together, they won all six (6) First Prizes. Many seconds and several others.

Mr. R. S. Chalker won Cock 1, Hen 3, Cockerel 1, Pullet 2, Pen 1.

Cedarvale, P. F. won Cock 2, Hen 1, 2, 5, Pen 2.

The Waldron Poultry Yards Ogdensburg, N. Y., Pullet 4, Pen 4.

Buff Plymouth Rocks.

A very large and fine class, grandly judged with shape receiving special care, we compliment the Judge. The winning Males a select lot, finely shown and of highest merit. For real quality believe no better class has been seen. Females up in every way. Rich and sound Buff seen in most all specimens.

Cock, First—Grand type and well finished. Second very good. Not at his best. Third—Fair size, fails some in shape.

Hens, First—Fine head points with style, shape and rare color. Second—Good color and nice head. good in every section and very good form.

Cockerels, First—A grand sound bird, right in every way. Second—Up to highest expectations in every way, has shape and rich color. Third—Very good.

Pullets, First—In head points, shape and color, a marvel, they don't grow them any better. Second—very similar. Sound tail, etc. Third—Has some shafting. Color fine shade, good type and head.

Pens, First—A good pen well

shown. Second—Must of been up close for quality, was sound and very even. Third and Fourth both very choice.

Silver Penciled Plymouth Rocks.

One of the very richest quality classes with general shape and markings of excellent quality. The Bonepart Park Poultry Ranch, Bordentown, N. J. won Cock 1, 2, Hen 1, 2, Cockerel 1, 2, 3, Pullet 1, 2, Pen 1, 2. Best Display, etc. These are true beauties when seen in this quality.

Partridge Plymouth Rocks.

Another large class of well shown birds. General richness of color was a feature with the best of markings and shape. Close up. We believe this was the best quality class seen to date and the interest seen here among the exhibitors and visitors was most encouraging for the future success of this variety.

Cock, First:—The best Cock we have ever seen of this variety. Shape ideal, size grand and color and markings even, rich and rare in quality. Back extra fine. Tail full and well carried, good head, fine eyes, etc. Second—Also a beauty, a royal good one. Third—Another of the rarest quality, finishing a trio that will ever stand hard to equal. Fourth and Fifth—Fine birds, we also liked No. 269, he had merit from outside appearance.

Hens, First—A beauty hen of rare rich color and fine markings, but probably not at her best here. Good head. Second—Extra fine shape and good color. Third—A little short in back, fine markings. Fourth —A charmer. Fifth—Poor shape.

Cockerels, First—A beauty specimen with fine shape and handsome color and markings. Good head, etc. has quality in all his make-up. Second—Also one of the very best in color, markings grand. shape extra, very desirable. Third — G o o d. Fouth and Fifth—Nice clean valuable birds.

Pullets, First—Hardly matured, quality of the best. Second—quite similar. will be one of the select when finished. Third and fourth—of fine quality and well shown, have size and shape. Fifth a beauty, full of character. There were other charmers here, truly a rich class.

Pens, First—Cock and Hens, well mated even in every way, fine heads. The Cock as good as the best. Second—A rare pen of chicks, well matched with fine strong male. Third—A good pen, pullets matured and show best of quality. Other pens very good.

The Bonepart Park Poultry Ranch, Bordentown, N. J. won a record of special worth here. Hen 1, 3, Cockerel 1, 5, Pullets 1, 2, 5, Pen 2. Manager John F. Mackay is one of the originators of this variety and since the year one has been a breeder and booster for these and the Silver Rocks.

Bird Bros., Myersdale, Pa. have exhibited and have won here for several years, their records are long and worthy as any breeder of any line or variety has ever made. They too were among the first to breed and to exhibit this variety and their success can be found in the New York show records for many years past. Here they won Cock 1, 2, 3, 5, Hens 2, 4, Cockerels 2, 4, Pullets 3, 4, Pen 1, 3.

Columbian Plymouth Rocks.

The Columbians formed a fine class all through. We can particularly commend the shape to which this variety is being bred. Markings and color also show grand improvement, with a future for these in view.

The Bonepart Park P. R. won here Cock 1, Hen 1, 5, Cockerel 1, Pullet 5.

F. G. Bran who won Cock 1, Hen 3, 4, Cockerel 2, 5, Pullet 1, Pen 1. Other winners were E. F. Hubbard, F. W. Otte, G. F. Leach, T. J. Euslin, E. B. Andrews, J. M. Jones, B. M. Shepherd.

White Wyandottes.

The White Wyandottes for many years have been held a very prominent position at this show, always among the large and strong classes with extreme interest in all sides. Their quality can never be questioned, and the winnings invariably are among the best specimens produced. The good birds of all varieties find their way to New York to try for the Premier Honors.

Cock, First—A bird of supreior bone, size and body, fine head, well finished and ideal back. Second—grand form, fails a mite in head, good back and breast. Third—Good type, a little loose feathered for us. Fourth—Beauty head and rare fine shape, very desirable. Fifth—A trifle short. No. 407—A royal good one from all appearance. His beauty shape was seen from any point.

Hens, First—Exquisite back. A strong quality here in all sections. Second—Good style, back longer,, practical quality hen. Third—Back ideal, fine head. Fourth—a grand type was shown. Fifth—Close up in every way.

Cockerels, First—A typical Wyandotte in every section, stands and carries well. Second—A very rare and fine specimen. Finished and in the best of form and condition, has a real Wyandotte head and looks. Third—Another choice one, good looks, tails, etc. Fourth—Fine, extra on both ends. Fifth—A little short, has good bone, etc. This class was extra large, strong and even.

Pullets—For several reasons we did not think this the usual quality class, the winners were good birds, true, but none like them should of been shown. First and Second did not near match. Third—Very nice. Fourth—Extra fine size and shape. Fifth—Very grand and were shown.

Pens—There was little to choose between first and seconds pens, both were grandly mated with extreme fine quality. Third—A well mated and show pen. A special beauty female in here. Fourth and Fifth both commendable pens.

Mr. Chas. Nixon, Washington, N. J., who has for several years judged this class here was an exhibitor this year winning second Cockerel and second Pen with birds worthy of consideration. Mr. Nixon has been a stand-by for years and has devoted his best efforts to this variety, we are pleased to note his success.

Mr. Jos. Russell, Toronto, Ont. has made three big winnings this year. At Gureph, Ont., The Winter Fair, at Boston, Mass. and now here he won Cock 1, 3. Hen 2, 3, Cockerel 1, 5, Pen 1, Display, etc.

Partridge Wyandottes.

This also was one of the large and beauty classes of the show. In size it was one of the lrgest ever shown while the quality was grand in both shape and color, as well as in markings. Select head and head points very noticeable.

Cock, First—A well balanced bird good back and head. Second—Color very rich, markings good. Third —Fine shape, a good bird. Fourth —A strong fellow in every way, one who shows exceptional breeding and value. Fifth—A fine type bird.

Hens, First—A very select hen in shape and color. Second—Good color and head. Third—Also a beauty, one of the best. Fourth and fifth—grand specimens. . Not up to others. No. 585 and 587 also looked very good from the outside. Heads very fine.

Cockerels, First—Good h e a d points and extra fine in all other sections. Type hard to equal, carriage of the best, color and markings very fine. Second—Probably looses on shape, stands a ltle high. Color extra fine, also head. Back and tail shape. Third—Fine head and a screaming good bird. Fourth —Looked very good in type and color. Fifth—The kind we like to own, a promising fellow.

Pullets a very select lot. First—A good even bird. Second and third—Equal, both very fine. Fourth—Grand color and markings. Fifth—Not finished.

Pens, also an even lot with but little choice in the five winners.

Mr. Chas. H. Wood, Wooster, Mass., made a splendid winning in this class, his line shows improvement and his success for years seems assured. He won Cock 4, Cockerel 1, 5, Pullet 3, 5, Pen 3, 4 and some specials.

The Sheffield Farms, Glendale, Ohio, who exhibit the Country over and are always ready won Hens 1, 3, 5, Cockerels 2, 3, Pullets 2, Pens 1, 2, 5 and specials.

Silver Penciled Wyandottes.

A rather small class of good birds. The First and Second Cockerels the pride of the class.

Columbian Wyandottes.

A real good quality class all through, type well shown, markings and head points better than usual.

Cock, First—The peach of the class, grand shape and beauty, color and markings. Second—A beauty Saddle, well shown. Third—Very fine, the valuable kind. Others up in quality.

Hens, First—A charmer, beauty form. Second, surely one of the best seen to date. Third and others a little extra.

Cockerels, First—Extra fine hackle, tail, etc., a good winner. Second —Fine head, tail, etc. Third—Rare type, good markings. Fourth—Grand markings. Fifth—Very desirable, fine back and breast.

Pullets, First and Second—A rich pair, extra quality in both. Third —Well shown and a good bird. Fourth—Looked extra good to us, so did fifth.

Pens, First and Second—Both even in mating and in good condition.

In this fine class our old and valued friend Mr. D. Lincoln Orr, Orris Mills, N. Y. won Cock 1, Hen 1, 3, Cockerel 3, 5, Pullet 2, Pen 1.

Dr. J. S. Rittenhouse, Loraine, Pa. won Cock 3, Hen 2, 5, Pullet 4, 5. First Cockerel was won by Bettin Farms and First Pullet by J. T. Lohnes.

Silver Laced Wyandottes.

This grand old beauty variety was seen at its best here with remarkable color and lacings, shape also was very fine. A very rich fine class. Cocks, First—One of rare value, the best of Silvery color, fine laced breast and of superior type. Second—Not as good in shape, good color. Third—Very good and bright. Fourth, Fifth and others also very nice.

Hens, First—Very good in color, type and head points, well finished and shown. Second—Very desirable, extra type.

Cockerels, First—Very fine, full of promise, a good winner. Second—Very fine form. Third—When at his best will be a beauty.

Pullets, a real darling, nice type and very fine lacings. Second—Good all over and close up. Third—Nice, others here also very fine.

Pens, First—Nicely mated with the best of quality. Choice male. Second and Third—Both neat pens of quality.

Golden Wyandottes.

A very fair sized class. Shape the feature here. Head points of a high average. The First winner, a rare and valuable lot.

Buff Wyandottes.

We failed to get special notes on these, depending upon another for Buff Birds, should be handled to be appreciated. It is quite unjust to write-up a class of this variety and quality unless you can see all in about the same light and condition. This is impossible when birds are double teired.

This to our mind was one of the very best classes in shape and color ever seen and we regret the lack of special notes.

Black Wyandottes.

A very small class, some good ones included.

Black Javas.

While not a large class, it was a real good one. These old time favorites are worthy of every consideration, and we hope for them. First Prize Cockerel, owned by the Linstead Farm, Robinson, Md., was the gem of the class.

Mottled Javas, a small class.

American Dominiques.

A very large and most beautiful class. No doubt one of the best brought together in years. Hen the Ideal Dominique, shape was seen with greatly improved color and markings. We always have had a soft spot in our make-up for Dominiques. We Barred Rock men owe them much.

Mr. A. A. Carter, Freeport, Md. won Cock 2, 3, Cockerel 2, 3, 4, Pullet 2, 3, Pen 2. See other winners in Complete List.

S. C. Rhode Island Reds.

The S. C. Reds with 156 birds shown formed one of the big classes of the show, also it was one of the best, with several of the most prominent breeders exhibiting. Competition was of the strongest and both Judges Card and Pierson performed a hard duty well. Color in quality of richness and eveness was ever at its best. Shape was also very good, the general average in both was way up above par.

Judge W. H. Card has promised to write a special report for us which we expect for this issue. We also expect the same from Judge W. R. Pierson on the Rose Combs. Our report follows:

Cocks—Fine type, rare color and well finished, an excellent specimen. Second—A sound valued bird. Extra color, fine form and strong. Third—Similar to second, shows exceptional vigor along with shape and the richest of color. Fourth—Very good. Fifth—A wonder, his color surface and under exquisite, grand wing, tail, etc. Value here. Many others worthy of every mention here. We favor eight ribbons in classes of this kind. Give value credit.

Hens, First— Afair sized only but a beauty in color, wing and finish. Second—Good in every way, nice form. Third—Good bone size and shape. Sound color. Fourth—Unfinished in tail, grand color. Fifth—Fail in head, shape good, color fine.

Cocerels, First—A grand good bird, fine style and carriage. Color sound, fine head. The kind we like to see and want more of. Second—also a real quality bird, well shown, needs a little to finish. Third—Rich even color, sound surface and under and nice type. Fourth—Very nice. Fifth—Same.

Pullets, First—Color and Shape superb, nicely finished, good head, etc., a clean winner. Second—Very similar except in head. Third—Nice form, sound color, good head, fine bird. Fourth and Fifth—Both royal good ones. General shape was fine.

Pens—A classy collection. First grandly mated, eveness in type and color remarkable, good wings, etc. Second—Also very even quality with size, nice heads. Third—Very good. Fourth—Every bird a corking good one, grand color and well mated. Fifth—Good, as were many others, the picking was fine in these, heads unusually good.

The Orchard Farms, Darien, Conn. made an exceptionally fine record here by winning Cock 2, 3, 4, Hen 3, 5, Pullet 1, 5, P en 1. In Rose Combs they won Cock 3, 4, Hen 1, 2, 5 and Pen 3. This with their Pittsburg win is a list of quality that carries with it every credit for merit.

It was pleasing to note the winning of Mr. Geo. W. Tracy of Kinderhook, N. Y. Beside winning first prize Cockerel, he won Hen 4. George has been a very successful Red breeder and always lands well.

Mr. Philip Caswell won First Cock and Mr. J. B. Hendrickson First Hen. Mr. E. M. Dutton, New Fane, N. Y. won Cockerel 3 on a really fine bird, also Third Pullet. Mr. Dutton has won here before and for some years at Buffalo, Rochester, Auburn, etc.

Other winners were Mr. I. W. Bran, South Braintree, Mass., Adelphi P. Y., Wyebrook Farm, A. S. Bailey, etc. See full list.

With Wid Card as Judge, who is

It would be difficult to conceive a more fascinating plumage than that displayed by the cock bird shown above. Considering that The Martling Hennery, Ridgefield, N. J., Box 186 E, won 1st, 2nd, 3rd, and 4th cocks, the student of Campines will take a special interest in this first cock. His type, head points, symmetrical proportions and his plumage and style are of a superior elegant order. Mr. Martling has reason to take particular pride in this near ideal cock.

F. L. SEWELL.

not very long and with Mr. Henry W. Alt, who is very long to assist him, birds were handled well from either the top or lower coops. Mr. Alt is of the firm of Houck and Alt, Buffalo, N. Y., who has bred winners for years at New York State Fair, Buffalo, Rochester, etc. We consider Mr. Alt an exceptionally good judge of Reds and hope to see him enter and judge some classes in the near future, this may not be to his liking, but we need such men as he is.

R. C. Rhode Island Reds.

Another beauty class of fine rich red color, remarkable for eveness. The only fault we could find in particular, was that a few of the combs were large and some uneven, the breeders want to look to this sharply and work on lines that will improve combs.

Cocks, First—A bird of special worth, good size and really wonderful color in richness and eveness, fine head, and the best of shape. Second—The color we admire, very bright, clean and rich, a grand bird in every way. Third—Another beauty, needs a little to finish. Fourth—Very good, full of life and quality. Fifth—Fine size, a good one.

Hens, First and Second—Very much alike, a hard pair to equal. Shown well. Third—That fine rare color, a beauty. Fourth—Very good. Fifth—And other good ones.

Cockerels, First—Good color, comb rather long, shape fine, a good one. Second—Our fine bird. Third—Extra good shape, sound color. Fourth—Good. Fifth—Very even and fine shape.

Pullets, First—Simply grand in every way, fine head, wings and tail, no question here. Second—Good clean bird, rich color. Third—Up close, color even and shape good. Fourth admirable in every way. Fifth—Fine color and very good form. Extra good head.

Pens, First—Well mated, rare quality. Male extra in eveness all females superior in color. Second—A beauty male, sound in color and shape, females also fine and well matched. Third—Very good so were the fourth and fifth also others seen.

Wm. Harold Tompkins, Concord, Mass., won in this class Cock 1, Pullet 1, 4.

Mr. Lester Tompkins, Concord, Mass., won Cock 2, Hen 3, Pullet 5. head pen 2.

Mr. E. M. Dutton won Cockerel 5, Pullet 3.

The Schenley Heights Poultry Farm, Pittsburg, Pa., won Cockerel Second.

Lght Brahmas.

Strange as it may seem, this was the championship class of the show in numbers and in quality was one of the best ever seen, there were 193 birds shown, with about every one of the quality fit to win. We have asked the judges to report this class for us and here include Judge Charles I. Balch report on the Cock, Pullet and Pen classes. Judge Rankins report is expected and will be included on arrival, or in our next.

The winners in this and all other classes are given in full following this mention. Look this up.

Light Brahma Cocks, 21 in Class.

First Cock—A large massive fellow, stood well showing excellent shape, good in head points, hackle, sound in wing, very broad back, and extra nice spread tail that was sound in every feather.

Second Cock—Was along the same lines as First and showed strong relation, better in head points than First, on other points was about a counterpart. He failed in surface color somewhat across wing bows and shoulders.

Third Cock—Excellent shape, long wide back, and extra good surface color, sound in wing and tail, good in head points, failed in surface hackle, showing but little striping but, when opened was well laced and with little break. He was a bird that would fool anyone until handled.

Fourth Cock — A massive bird, good in all sections, nice in surface and undercolor, wide back well spread tail and as a breeder as good a bird in the class.

Fifth C ock—Not a large bird but excellent in shape and color, poor in head, extra nice in hackle (getting special for best hackle male) nice well laced back, sound spread tail and standard wings.

There were several other cock birds that were worthy specimens among them I might mention 899, 901 and 909. In fact there were but two or three that were not high class birds.

Pullets—28 In Class.

First Pullet—Nice in shape, long wide back, well laced spread tail, standing well up on legs, very white surface, nice undercolor, with these she carried nice head and color points.

Second Pullet—Very nice bird, not quite s good in shape, stood well up, good in surface and sharp in color points.

Third Pullet—Nice in shape and color, very nice in head and hackle, other points very nice, showing distinct black and white, lost in not being as mature as First and Second.

Fourth Pullet—A very fine specimen, very similar to Third pullet in markings and a very hot one but lacked maturity.

Fifth Pullet—A large nice pullet, good in head, hackle, tail and wings but, lost in shape and color to the other winners.

I might state that the pullets shown were a very fine lot take them right through, there were so many good ones that it took but a slight defect to put them out of the ribbon, and that exhibitors showing birds that did not get placed had no reason to be ashamed of the quality of their birds.

Pens—14 in Class.

First Pen—Well shown, stood out well in Class. Cockerel heading pen while a little short in back carried excellent color. Females a very nice lot of pullets, sharp n color with good surface.

Second Pen—A pen of old birds, also well shown, cock showing nice shape and color, failed in head. Hens a nice lot, showing excellent shape, size and color. This pen was a strong contender with First.

Third Pen—Pen of young birds. Cockerel very sharp in color points, tail somewhat narrow. Pullets a nice lot showing good shape and color.

Fourth Pen—Male heading pen large nice bird, good in shape and markings but, lacked in surface color. Females a good lot, nice in shape and color.

Fifth Pen—A very nice pen of birds, failing to get a better place only through minor defects. Male and females showing good Brahma type.

There were other pens worthy of mention, No. 3056 a very fine lot, but not matured.

Would state that I do not think the Pens (with a few exceptions) take them right through were as good in type and color as the single classes that I handled.

Dark Brahmas.

A small class. Mr. Newton Adams showing some fine specimens, as he has for over 20 years.

Cochins.

All varieties of Cochins were seen. Buff being the largest class. The quality was very even and good.

Black Langshans.

This was a surprisingly fine and large class. Breeders and judges alike claimed it to be one of the best ever seen, be this as it may we hope for more like it, this variety is worthy of every consideration.

Cock, First—Rich in color and extra size and type, fine head and fine style and carriage. Seemed grand color and a fine bird. Third—good size, shape and color. Fourth—Not at his best here, good quality. Fifteen a very good one, well carried.

Hens, First—The best in form and size we have seen. Carriage very good, color grand. Second—superior in color, her sheen unbeatable. Third—Another good one. Fourth—Not as well shown as others. Fifth—Good shape and sound color.

Cockerels, First—A charmer. We have never seen better, others may have, but they did not say so. The best of shape and color with size and ideal carriage. Second—A beauty, not in best of condition. Still it would take a wonder to run close to the first one. Third—Not full in tail, a handsome fellow with rarest quality of color. Fourth—Not at his best or finished. Fifth—A nice bird, sound color.

Pullets. Has most everything to commend her, size, shape and color. Second—Select color and good shape. Third—Also a beauty up close in every quality. Fourth and fifth—Both fine.

Pens a nice lost. First—wonderful in mating, shape, size and the best of sound color. Male fine. Second—Male extra and one of the best, females good. Third—Well selected. Fourth and others nice. This class was a special credit to the Breeders.

Mr. Porter Elosser, Cumberland, Md. was the big winner here taking home the ribbons for Cock 1, Hen 1, 4, Cockerel 2, Pullet 1, 5, Pen 2.

Mr. M. S. Barker, Thorntown, Ind. can well feel elated over his record of Pen 1, Hen 2, Cockerels 3, 5.

Ives and Ives, Branford, Conn. owned the wonderful First Cockerel, they also received Cock 2, 4, Pullet 3, Pen 4.

S. C. White Leghorns.

If it is possible to imagine or to put together a better class of S. C. White Leghorns than was seen here then we sure would like to see them. We might refer to winners

ALDRICH FARM, COLUMBUS, O. WHITE ORPINGTONS.

The Aldrich Farm White Orpingtons have from the first displayed unusual winning qualities. Making records wherever shown the county over. At the late M. S. Garden, New York Show, with but three birds entered they won Cock First and Third and Cockerel First. They did not show females as their matings had been made early. Above is shown some of their famou s males, partly the foundation of this line. Birds of record and of line breeding value which is held today. Assuring superior results and highest values.

H. P. S.

of the past and draw comparisons this would be interesting and only prove were notes properly taken that the birds and winners here this year were superior, almost without any exception to those of former years. The old time winners made their mark and are directly responsible for the improved winners of today. They with the guiding hands of Mr. D. W. Young made this class possible, all credit to them. The laws allow but five prizes in each class so many most worthy specimens went back home with no official record of their worth. Some day when a class of this character is again shown we will hope to report every bird in it, there were birds here unmentioned that would sit any other class of S. C. White Leghorns afire, and make them look like a mashed Pumpkin Pie. Now can this help to convey to you how really good the winners were? Judge Rice did a rare fine job.

Cock, First—Dear Reader tell us please the best thing to say and we will copy it for this bird, even then justice will fail. The best of size and shape, positively the best of color and absolutely sound in every way. Beauty Comb, strong flaming Red Eyes, full tail grandly carried. Second—Ditto to all and you have his correct line. Third—Very close up in every way. Fourth—Can't find any fault. Fifth—Just as good. All five winners owned by Mr. D. W. Young.

Hens, First—A regular queen, grand condition, shape and color size fine, head grand, style of the best. We do like her. Second—A very good hen. Third—Very much like the first and very close up, fine style and finish. Fourth—Very good. Fifth—Very charming, fine head.

COCKERELS—The best quality lot seen here or at any place first-Was size and the best of carriage with wattles and lobes. Shape of Back, Breast and general style surperior to any. Tail full and grandly caried. A great winner. Second has a very fine head and a crackerjack in every quality. Third quite similar and well shown. Fourth grand type, sound color and fine style with beauty tail. Fifth-very good indeed.

PULLETS—First—A grand winner with all to commend her fine shape and extra head and color. Second very good in condition. Fourth sweet and good. Fifth—Sound in every section in shape and color.

PENS—A grand collection well mated, choice male and four very even females with size and conditions. Second up to every requirement mated excellantly. Male grand, good heads on all. Third—Very similar worthy of every honor. Fourth—Very good. Fifth—A rare pen in quality.

Yes Mr. D. W. Young, did it again, he made almost a limit record in this best class ever shown, and his winnings as they stand are of greater credit to him than if he had won all, A mention of any kind in this class for it proves the quality of the class. was a stamp of approval and worth. Mr. Young has made record hens for years but never with any better birds. We can well commend his success and wish him the same in the future, for that will always mean improvement, he is now in shape to give us the result of his best efforts. Mr. Young won Cocks 1-2-3-4-5- Hen 3. Cockerels 1-2-3-4-5. Pullet 1-3-4. Pen 2-3, and several specials including Best Display.

Mr. Stewart Haddock, Ponghkerpsie, N. Y. made a worthy and large exhibit of his line of birds showing 12 cock birds, every one a charmer fit to win in most any class, the eveness of type and the similar style of these birds was good to see. Here he won Pullet 5, Pen 5. Mr. Haddock has splendid records made this year at the New York Palace Show, Buffalo etc. His line is a dependable one.

The Rancocas Farms, Browns Mills, N. J. were strong contenders here and won well. In the future as well as the past this line must be considered. The quality shown here and that, that has won for them this and for years at other shows is bound to be heard from. Here they won First Pen, First Hen and Fourth Cockerel all in birds of extra fine quality and in grandest condition. Mr. M. L. Chapman as usual had charge here and we commend his work it was simply beautiful.

S. C. BROWN LEGHORNS.

A very large and nice class of birds, larger and better than seen for quite some time. In Males eveness of hackle and saddle with nice striping was noticeble. Heads very good. Females up to usual quality.

S. C. BUFF LEGHORNS.

Also a very large and fine class. Color seen here at its best. Females we thought averaged the best, size was good so were heads and condition. Males some very fine ones, and some not so fine. Combs were rather indefferent, some very poor. Here again let me advise the breeders to look to combs and to breed for better head points.

R. C. BROWN LEGHORNS.

Very good class, a rare line of birds. Males showing every quality. Females also good. Size excellent.

R. C. WHITES.

A nice quality-class, would liked to have seen more and win in future. The condition and quality seen here was of the best.

S. C. BLACK LEGHORNS.

This was really a rare class, well shown. In size, soundness of color and head points they are the equal of any variety of Leghorns now bred.

The Turtle Point Farm. Saratoga Spring N. Y. with Mr. Wm. M. Anderson, Mgr. in charge won Cock 1-2. Hen 1-3. Cockerel 1-2, Pullet 1-5.

In R. C. White Leghorns they won Cock 1. Hen 1. Cockerel 1-4. Pullet 3.

In S. C. Silver Leghorns they won Hen 2. Pullet 1.

In both Single and Rose Combs the classes were very small. Much smaller then they should be and a dissapointment to all.

SPANISH.

A great beauty class coming from California.

ANDALUSIANS.

Very fine class, good alike in numbers and quality. Birds finely shown. The winners a rare lot.

ANCONAS.

In single combs a very large class and in quality worthy of this variety. The Cock's won exceptionally strong, good in color and shape and the Cockerels probably the best lot shown here. Females won up to every ones expectations, here also we can commend the shape and color. The First Cock and First Cockerel were easy winners, birds of grandest merit.

In Rose Combs the same can well be repeated, except that the class was smaller.

Mr. H. Cecil Sheppard, Berra, O. won in S. C. Cock 1-3-5, Cockerel 1-5,

FERTILE EGGS AND A BIG, LIVELY HATCH

Pratts OF PHILADELPHIA

Before you set a hen or start your incubator this spring, build up your breeding stock. You will save time and money. Make sure that they will give you fertile, sure-to-hatch eggs by giving them

POULTRY REGULATOR

No matter what breed you raise—the better the birds the more Pratts Poultry Regulator will do for them. Sold under our money-back guaranty that it will help your poultry. Go to the nearest dealer in Pratts Poultry Regulator and Remedies—there are 40,000 of them, or write us.

PRATT FOOD CO. Philadelphia Chicago Toronto

Pratts Powdered Lice Killer. Sure death to lice on poultry and in nests or litter. Non-poisonous. 50c. and 25c.

Pratts Poultry Disinfectant. A liquid lice killer, germicide and deodorizer. $1.00 a gallon, 35c. a quart.

236

Pullet 3, Pen 1-4-5.

In R. Combs-Cock 1-2-3-4, Hen 1-3-5, Cockerel 1-3-5, Pullet 2-3, Pen 1-2.

CAMPINES.

SILVERS—A very good sized class birds well shown. There was quality here worth while and honor enough for all. The quality was very even, birds strong and in fine condition.

The Class of Goldens was somewhat smaller, but equal in quality. Interest in this varity was never better then now.

Mr. M. R. Jocobus, Ridgefield, N. J. never made a more worthy record than here and we wish tis champion of champions all sorts of "Good Luck." He won on Silver Cock 4, Hen 1, Cockerel 4, Pullet 4, Pen1. In Goldens, Cock 1-3. Hen 1-2-4, Cockerel 2, Pullet 1-3, Pen 1.

The Martling Hennery, Ridgefield, N. J. who also have years of winnings hanging to their belt won in Silver Cocks 1-2-5, Hen 3-5, Cockerel 1-2-3, Pullet 3, Pens 2-3-4. In Goldens Cock 2, Hen 3-5. Cockerel 1-3-4-5, Pullet 4, Pen2.

BUFF ORINGTONS.

A class of general merit and highest possible quality. Type and carriage far above any former class. Heads of a high average and eyes unusually fine. Color very even and sound. A bird to win here had to be as near perfect as has ever been shown.

COCK First, A royal beauty at his best, sound all over. Second a strong -runner-up -with -exceptional value. Third similar, a grand big bird. Forth and fifth both of Rare fine color and quality. Other beauties here the winners most worthy.

Hens a charming lot—First—of rarest sound, soft Buff, well formed and fine condition, a great winner. Second, also a charmer, a great pair. Third, no doubt one of the very best we did like and think well of her. Fourth, very good. Fifth, a hen of Special worth.

COCKERELS—First—Grand head, elegant shape and surperior color, he touched all the high spots in quality. Second Rich in Color and fine type, a grand strong bird, good bone and sound wings. Third, also a strong boned fellow, good width, well carried tail, color fine. Fourth, very good. Fifth, fine color.

PULLETS—First, a pleasing Buff. Sound and very uniform, nice shape size etc. Second, also a beauty, one of great worth. Third very similar. Fourth, a beauty, nice shape and color. Fifth, very nice.

PENS—From First to Fourth a most charming lot, are well mated, beautiful even color and fine type. Males deep and broad good backs and fronts, good heads. Fifth looked well, even color.

The Owen Farms Vineyard Haven, Mass. won in Buff Orpingtons Cockerel 1-3, Cock 4-5, Hen 1-3, Pen 2-4-5, Best Display etc, a great win in a great class. They showed a wonder pullet that we fear the judge overlooked, she was absolutely sound Buff. In White Orpingtons they won Cock 4-5, Hen 5, Cockerel 4, Pullet 3-4, Pen 1, Best Collection etc.

Mr. Hugh A. Rose, Welland, Ont. won in Buffs-Cock 1, Hen 2, Cockerel 5, Pullet 2, Pen, 1. In Black Orpingtons Cock 1, Hen 3, Cockerel 3, Pullet 2, Pen 2. These birds were all worthy representations of a most worthy line, Big Bone fellows, full of vigor and all shown in prime condition.

BLACK ORPINGTONS.

Without question the best class ever shown, larger in number and color of grandest quality. Most every bird shown was of special value and worth. This class showing the greatest possible improvement ever seen in them, such classes mean success for the variety.

COCKS—First, A great strong fellow, stands well, elegant form massive, good head and fine color. Second, very broad and full fine tail, grand color. Third and Fourth similar, both very fine. Fifth, a good strong bird in every way.

HENS—First—In size, shape and finish one of a million. Color absolutely clean and sound. Second quite similar, a rich winner. Third, very fine in color. Fourth and Fifth both good winners.

COCKERELS—First—The Gem of the class, a royal winner of highest quality, Massive and equal in all sections, fine back and Tail carried just right, grand width and depth and full of vigor, surely a wonder. Second a very small notch behind the winner, he will make some cock. Third another strong bird well placed, has Fourth and Fifth, beauties worthy. The Budle Green-Sheen color seen in First and Second Cockerel was the handsomest seen in a black bird, it was absolutely sound.

PULLETS—First, A charming pullet grandly shown, fine shape and the best of style. Second also beautiful. Third similar, a extraordinary trio. Fourth and Fifth very worthy.

PENS—First and Second in a class by themselves. Size and Shape wonderfully matched, color very good. Third also a good one as were several others here.

The Faxhurst Farm, Lime Rock, Conn. made their best showing here and additions to their long records of winnings ot this show in the past, they never exhibited better stock, nor did they ever have better competition. When the ribbons went up it was evident they had really surprised and former rceord ever made in Black Orpingtons in New York. They won Cock 2-3-4, Hen 1-2-4, Cockerel 1-2-4-5, Pullet 1-3-4-5, Pen 1.

S. C. WHITE ORPINGTONS

A great large class, the largest of the Orpigntons and a very select lot of birds, mostly in very fine condition. Heads very good as a rule and tails finished, full and well carried.

COCKS—First—A grand big fellow with full breast and fine shape, color good, head fine. Second a good strong bird, well shown. Third, very close to above in every way. Fourth, one of fine quality, good points etc. Fifth very similar, a good bird.

Hens, good and in rare condition. Second also very nice, back good. Third, similar. Fourth and Fifth fine.

COCKERELS,—First—Shown in fine condition, a fine strong fellow, good breast, back and body, nice head. Second, one of promise a nice cockerel. Third, fine, grand shape. Fifth well worth good mention.

PULLETS—First-well shown, good type and head. Second, a splendid pullet. Third and Fourth, not as good in head, but unbeatable in shape Color very fine and sound. Fifth a good big one, well shown.

PENS—First—One of exceptional Quality, Elegant in Mating and in quality, All fine heads. Second, another good one, good shapes and even. Third up very close, fine shapes and condition. Many other fine ones here.

ONE CENT PER CHICK FOR THREE WEEKS

Pratts OF PHILADELPHIA

Here you have it at last! A baby food for baby chicks. 75 per cent. mechanically predigested. Not a lot of finely ground grain or scratch food. There is positively nothing like

PRATT FOOD CO. Philadelphia, Chicago and Toronto

Pratts White Diarrhoea Remedy. Saves the chicks. Guaranteed to satisfy or money back. 50c. and 25c.

Pratts Head Lice Ointment. Effective, soothing and safe to use in all parasitic diseases. 25c. and 10c.

236

The Aldrich Farms, Columbus, Ohio, made a very unusual and really remarkable record here by winning Cocks 1-3, Cockerel 1, in just three (3) birds entered, awards better than our pen tell their quality, they were superb.

The Heatherwood Farms, Florane Park, N. J. showing commendable birds as usual won Cockerel 3, an a very select typical bird.

The Owen Farms Winnings are given with the Buffs above.

BLUE ORPINGTONS.

A rich class in quality. Mr. Halder Nicholson Leominster, Mass, One of the first to breed this varity in this country won, Cock 1, Hen 1, Cockerel 1, Pullet 2, on four entries, that is picking them.

Bucrcroft Orpington Farm won Cockerel, Pullet 1-3.

Rose Comb Orpingtons were small classes.

in numbers the best to-date, Reds won quite a feature.

In Reds E. K. Conrad, M. D. won Cock 2-3, Hen 2-3, Cockerel 2-4-5, Pullet 2-3-4, Pen 2-3. In Spreckled he won, Cock 1-3, Hen 2-4, Cockerel 1-4, Pullet 4, Pen 4-5.

The Red Sussex Farms, Marysville, Mich. won in Reds, Cock 1, Hen 1, Cockerel 1, Pullet 5, Pen 1. In sprekled Hen 1, Pullet 1.

Mr. Robt. Essex, Buffalo, N. Y. won in Speckled Cock 2, Hen 3, Cockerel 2-3, Pullet 2-3.

Mr. Geo. W. Tracy won Red Pullet, First, (We want her breeding.)

OTHER VARITIES.

W. C. Black Polish a fine lot and a good number seen. Other Polish a rather small entry.

Silver Spangled Hamburgs, a grand display, other classes small.

Houdans a very large and fine class of birds, well shown. Birds in nice

Sunswick Buff Orpingtons have been seen at their best this season, they have been well placed at several of the best shows. At Philadelphia they made nearly a sweep. Above is shown their First Prize Pullet, a bird of exceptional merit that was favorably considered for sweepstake prize. The Sunswick Farms have since won more honors. Notably winning First Prize Pullet at the M. S. Garden New York Show.

H. P. S.

DARK CORNISH.

A very fine and large class of birds, well handled, the quality ran exceptionally fine, and here like in other classes it took the best to win. Mr. John W Ward, Jr., Pennington, N. J. won cock 1-3, Hen 1, Cockerel 1-3-5, Pullet 1-2-3-4-5, Pen 2-3.

Dr. A. W. Low won Third Cockerel, Hen 2, Cock 2.

White Cornish a small class.

SUSSEX.

The display of both Red and Speckled Sussex was very fine and

condition. Mr. James Aberuethy, E. Pembroke, Me. won Hen 2-3-4, showing in this class only.

Only a few White Hondaus seen. We all missed Mr. Barrman.

White Faverolles a humping fine class and plenty of them, they were a good attraction and we were told sales were good in there.

Salmon Faverolle's also a fine and worthy class. Buff Faverolle's. Also a fine lot, these look like comers.

Games won a big class, all varieties being shown.

Silker's a beauty entry and class.

BUTTERCUPS.

A surprisingly fine class of birds, with the good quality running all through, all winners are given along further.

TURKEYS.

One of the best classes seen in years and one of the largest, we think this a compliment for Mr. Bird who judged them and did a fine clean job, althrough we regretted him not showing his line here.

BANTAMS.

There were large and beautiful classes of these in all varities, and those who know claimed superior quality for them.

PIGEONS.

While not as large an entry as usual, it was one of quality and worth. Note our special report on these.

But once a year we have the pleasure of writing a M. S. Garden Show report, at its best it is a big job, still there is a something to it that fascinates and we always wind up with regrets. This show made no general resume beyond the plain statement that quality of superior merit was noticeable in every class improvement was evident and we feel that all can rejoice with the progress made and the out look for the future. There is no possible way of placing a value on a exhibit of this kind to the Standard-bred poultry industry, but we can see it, and can feel that they are the real foundation of all we have. Admit this and determine from now on to give all possible aid to poultry association, for among the first best things we can do for poultry, is to support the Exhibition. The Judging here this season was unsually good and but little fault finding was heard of. Sales made were greater then ever, so was the attendance, we will look with much interest to the next Garden Show which will be held Dec. 31, 1915 to Jan. 5, 1916.

FONTHILL, ONTARIO.

RICE'S S. C. WHITE LEGHORNS,

Are now entering upon the 20th year of their popularity, during which time they have earned for themselves, a place and a name in Poultrydom, both as winners in the largest shows and as HEAVY LAYERS of LARGE WHITE EGGS. We are better prepared than ever before to furnish EGGS FOR HATCHING, which will give desired results, yearling hens and vigorous males produce EGGS that will hatch and CHICKS that will grow. Eggs from the same pens that we use for our own hatching, Breeders and layers always for sale. Stock and eggs guaranteed. Write for particulars.

IRVING F. RICE & SON, CORTLAND, N. Y. BOX 78.

NONPAREIL

Barred Plymouth Rocks

Line Bred Since 1883. Winners at Leading Shows, East and West, since 1885.

GOLDEN CAMPINES

Cocks

M. R. Jacobus, 1, 3; The Martling Hennery 2.

One of the pleasant surprises among the fine showing of Campines this year at Boston was the interesting exhibit of Homestead Campine Farm, Box R, Wayland, Mass. The fine tidy forms and gracefully rounded plump breasts and bodies of this farm's birds, display all the good qualities originally recognized in the Campine, with its Standard points refined. Those who have had difficulty in obtaining fine Campines with neat, small combs will appreciate the head furnishings of this first prize hen and pullet of the same strain which appear on this page. Breeders of other classes of Mediterraneans in America also have had their troubles with coarse combs and wattles, so when small, fine combs on vigorous birds are finally obtained, the fancier appreciates their value. The almost clean white necks with the good throat and upper breast markings are also rare high quality points and the straight regular pattern of sharp barring of black and white, with enough of the white to give an effective contrast and gay appearance, stamps them as superior show birds.—F. L. Sewell.

F. G. BEAN, COLLEGEVILLE, PA.

EGGS 12c A DOZEN

By the use of "OCULUM", a New Discovery, which is injected into the fowls with a syringe.

D. B. McNeill, Cunningham, W. Va., says: "I was getting 20 eggs a day when I commenced to use "OCULUM" 3 weeks ago—Today I got 300".

"OCULUM" is endorsed by such leading fanciers as Fishel, Hawkins, Latham, Bradley Bros., Foxhurst Farm, Tectonius; by numerous P. Journals and by Experiment Stations. Authorities like these, you WELL KNOW, WOULD NOT ENDORSE QUACKS.

Roup, Cholera, and W. Diarrhea permanently cured.

Dealers handle it. Trial size 50c. Large bottle $1.00 postpaid. Money back, if you want it.

Our FREE BOOKLET tells all about "OCULUM" and all about our FREE PRIZE OFFER of $100.00 in GOLD.

S. C. White Leghorns

For the largest, strongest, finest and whitest da-ole-chix you ever saw, that come into the world healthy and grow into money rapidly, that mature at the proper age for business, write us. Chix from beautiful exhibition matings—$1.00 each. Grade No. 3, 15c each, and every one good. It is not the number you buy, but the chix you raise that determines the profit. Our chix grow! grow!! GROW!!!

Free Mating List, or order at once.

S. LEROY TUTTLE, Manager.

ROSEMONT FARM Franklin, Pa.

2354 Eggs From 10 Hens

Director Tom Quisenberry did that at the Missouri State Experiment Station.

He don't claim you will do that, but he is at the head of the only exclusive poultry correspondence school in the World and he will teach you the common sense way to big profits.

Taught By Mail

You can begin to put the lessons into practice as fast as you work through the course. You can make them pay you from the beginning. Ask for particulars.

When the Great Generals

of the poultry world get behind the breastworks of

Orr's Chick Feeds

It should be an example for all. An army for the best results must be well fed. Same with poultry.

Young, Thompson, Manning, Turner, Fiske, Owen Farms

are among the Generals who realize that to win, the best ammunition must be used. Year after year these great breeders win hard fought battles. **There's a Reason.**

Orr's Chick Feeds

Send for sample and price list of the greatest and safest chick feed now on the market. We also make all kinds of poultry feeds.

This "Vigorous" strain of Campines from the Homestead Campine Farm, Box R, Wayland, Mass., won last year at Boston first and second cockerel and third exhibition pen. Yet there was considerable progress evident in the quality of the Homestead Campine Farm birds this year. Some of their fine points were mentioned in the footnote under the first prize hen on this page. This farm won at the big Boston show this year 1, 2, 3 cocks; 1, 2, 3, 5 cockerels; 1, 2 hens; 2, 3 pullets; 1, 2 pens and a well deserved special for best display. Their birds were all in fine, healthy bloom of feather and general condition and were worthy the title given them by their owner—the "Vigorous" strain. With this characteristic established and their birds possessing the many Standard show qualities they exhibited at the last Boston show, the Homestead Campine Farm should achieve many honors with their fine stock in the future and it is in a position to furnish stock and eggs to many admirers of Campines who have learned of their wonderful productive powers.—F. L. Sewell.

Every age and generation has produced its notable men and women who have led the world in its various lines of betterment and progress. Now more than ever do we recognize leaders and appreciate their worth. The poultry industry like that of every other industry, has among its members past and present names that will live as long as the world lasts. Men who by their efforts, study and skill, have been most successful, and whose work has been of nation wide value. Mr. D. W. Young of Monroe, N. Y. whose picture is above shown, has for many years been recognized as a leader in the industry. His strain of Single Comb White Leghorns is first and foremost a leader thanks to Mr. Youngs ability, for in these he has shown the way to greater success, and has made this variety one of the two or three most popular varieties bred. H. P. S.

MY IMPRESSIONS OF M. S. GARDEN SHOW

The Fanciers I Met, and the Exhibit of Single Comb White Leghorns

By Eugene Smith

To sum up the 1915 Madison Square Garden Show in one word, it was simply "great." This was my first visit to the Garden Show and I certainly was amazed to see such quality in numbers. Never before had I seen so many good birds; such uniform high quality; such a royal bunch of fanciers; and such a well planed and smoothly conducted show. The ribbons were placed where they belonged and not one complaint of any nature did I hear.

Of course, I was particularly interested in the White Leghorn classes, but I managed to take time to carefully go over every class in the show, including the Bantams, Pigeons and the several new varieties that were cooped on the balconies. This was no small job and consumed several hours of my time. Very few poor specimens were to be seen in the entire exhibit and I was particularly impressed with the uniform high quality of all the classes and the superb condition in which they were shown.

The White Leghorn classes showed great quality, especially the males. the five winning cockerels were certainly a classy lot; so uniformly good were they that first could have been placed fifth and fifth placed first and there could have been no cause for complaint. The first cock was "some bird," and second, third, fourth and fifth were such close "runners up" that there was but little to choose between them.

The females were good, but not so uniform in quality as the males. The hens "in the ribbons" varied in type and points. First hen, a little coarse; second, good; third, a fine bird not shown at her best; fourth, fine in type and color with exquisite head-points, but lacked condition; fifth, very much like third.

The winning pullets, in my opinion, were very much better than the hens. First and second were both superb speceimens with but little to choose between them, and represented my idea of the real Leghorn females. Third, fourth and fifth, much alike, but not quite as classy as first and second.

The many Easter fanciers I met were a great lot; all of "blue ribbon quality"—"Dan" Young, "Hank" Schwab, Louie Graham, Harry Wolseiffer, C. J. Fiesh, Gronsback and all the rest of them. They certainly gave the Western bunch a royal welcome and to say that we enjoyed ourselves is putting it mildly. Especially did the "Indians" from Chicago and therebouts enjoy the Flea banquet and the side trips, and since I returned home I have heard nothing but praise among the boys for the Madison Square Garden Show and the royal Eastern fanciers we met while there.

Long live the "Garden" Show, and may we attend many more of them.

S. C. WHITE LEGHORNS AT NEW YORK

The Class Never Excelled---One of the Largest at the Garden

By Judge I. F. Rice

In handling the White Leghorn class at the recent Madison Square Garden Show, I found that although in numbers was not quite up to the class of 1914 in quality it has never been excelled and it was still one of the largest classes in the show, demonstrating that the popularity of this grand variety is as great as ever.

In cock birds I found four cocks which as a class were far the best quality that I had ever handled. The first cock was an unusually nice bird with a splendid back and saddle and a well furnished tail carried at about the right angle, neither too low or to high. He had a six point comb free from thumb marks and smooth in texture. The second cock was a bit longer in body with nice carriage and and a six point comb and standing well up to the first in quality. The third bird was the same type of bird as the two, lobes a little large. He also had a six point comb. The fourth cock lost to third on account of head points, he had a five point comb but a poor back end to comb. He was really an excellent bird but not up to the preceeding three. The fifth cock was a solid bird of nice plumage but a little short in back, he also had a six point comb. Several other fine cocks shown, a rich class.

In hens there were thirty-five, and as a class were superior to those of the class of 1914, showing better size and quality. The first hen was a hen of good size, with good length of back and nice carriage of tail, she had a fine head with six point comb of nice proportion, was remarkably white with good yellow legs which is something that is as a rule overlooked too much in judging this variety. The second hen was a very nice hen, showed in good condition, loosing to first hen in length of body. She had a four point comb of good quality, not quite as good in leg color as the first hen. The third hen was a large white hen with a four point comb, not a good poser and too shifty for the judges to catch her at her best. The fourth hen was a very well shaped hen with a nice shaped tail, nice head nbut short in shank and not shown in the best of condition. Fifth hen was a nice white hen with a six point comb though a trifle short, a hard hen to place on account of her temperament which caused her to appear different at different times.

There were twenty eight cockerels in which the quality of last year was to be found. The first was a nice rangy bird with good carriage of tail, good plumage and good five point comb, both front and back, a very nice bird and strong winner. The second cockerel was a nice white bird with five point comb, losing to first in length of back. The third cockerel was a nice white bird of good size carriage, losing to second in head gear, having a six point comb too high in the back. The fourth bird was a nice trim bird too young to be thoroughly finished, having a nice five point comb, he doubtless would have been higher in class if he had more age. The fifth cockerel was a large white bird, a good typical leghorn with a six point comb too high in the back.

Madison Square Winners
240, 242, 244, 266

The above a pen of pullet records of Rose and Single Comb Brown Leghorns, Rose and Single Comb White Leghorns. All large birds, large white eggs. 48 prizes Madison Square. Everybodys - Chats

By

HENRY P. SCHWAB.

Everybodys Poultry Magazine.

* * *

Dose'nt this appeal to you? Think it over.

* * *

With your aid, we will make this a welcome visitor to the homes of every-breeder, we hope for general approval.

* * *

Read every article in this issue, note every page, then tell us what you think of it, suggest improvements and how we can possibly benefit the industry and the breeding of standard-bred poultry more.

* * *

The "Eggs for Hatching" business is coming back, where it should be, orders are more plentiful then for two or three years past. This is a sign of the times, and a good one at that, for we know of no way that a breeder can improve his stock cheaper or with more surity.

* * *

We have always recommended eggs for hatching and always will, while it has some draw backs like everything else, it has far more advantages. In this, those who appreciate quality can buy eggs from the greatest winners and procure blood lines that can't be had in any other way and at prices within the reach of all.

* * *

Let me ask the breeder to send me a copy of their Mating List, Circulars etc. I wish to file these for ready reference.

* * *

When you talk "chicken" to anyone, be sure and mention "Everybodys Poultry Magazine." You will be glad to recommend and to become a "Booster." See if you don't.

* * *

Reports from Washington say the birds are building their nests. Some politicians are feathering theirs.

* * *

Have tried to make our M. S. Garden New York Show report complete. See this elsewhere in this issue. Note also we publish full list of exhibitors and awards.

* * *

It begins to look as though all the possible Ford stories have been told, and we may look forward to a pleasant Spring. Howell may Still have one left, shoot.

* * *

Our subscription price is 50 cents the year. Three years (3 three subscriptions) for One Dollar. We are going to give you the biggest value you ever received for the money in Everybodys.

* * *

Answer to J. D. H.—A corn is a little lump of agony placed on the foot to instruct us what size shoes we shall wear. In days gone by when a person with a number 10 foot wore a number 10 shoe there were no corns. The average crop to-day is about three corns per foot with now and then a bunion or two thrown in on the side. Corns probably have severed as many friendships as have hearts. To intrude upon one's heart may be wrong, but to intrude upon a corn is a crime.

* * *

We awaite with interest the reports of the New York show by our Western Editorial friends who attended this year. Both Richards and Hale are qualified critics who will have some ideas to express.

* * *

You can never tell where the country newspaper goes to, says an exchange. Some of them are like the editor who wrote to a catalogue house for some advertising. They replied that they would be glad to use his space, but would like to know what territory his paper covered, whereupon he told them: "This paper goes from New York to San Francisco, from Canada to the Gulf, and it keeps me working until 2 o'clock in the morning to keep it from going to hell."

* * *

There is good reason for complaint with the combs of several varieties, as noted at the shows this season. Two or three varieties have been noted when the combs averaged poor, and at some of our best shows too. Breeders should give Combs more attention in mating and breeding. Size and courseness should be eliminated to a certain extent and better shape and proper size bred for. Combs that properly conform to the bird are very desirable.

A poor comb is a serious defect that will breed and re-produce for several generations, it more then any other section. Mars the beauty and often the value of an otherwise beautiful and rare specimen, so that its value in breeding is all that the stand-

AMERICA'S BEST LIGHT BRAHMAS.

If your flock is weak in Hackle, Wings or Tailmarkings send for one of our Cockerels. We have them, and they will improve any flock. Eggs for hatching from 8 grand matings. Send for list.

ard gives it. Look well to the Comb's and place to improve them in your this years breeding.

* * *

The Broadway car was very crowded when the rural couple got abord. At the door the young man looked down doubtfully into the pretty eyes of the blushing girl.

"Do you suppose we can squeeze in here?" he asked dubiously.

Whereupon she put her lips to his ear and whispered very softly:

"Don't you think dearie, we'd better wait until we get to the hotel?"—

* * *

President J. C. Punderford, (We should say Doctor) is working up big business with the Certified Farms Co. of New York. They have opened up another Store at Number 39 Barclay St. with Mr. F. H. Dillingham in charge. Handling a complete supply of Poultry feed's and appliances and making a specialty of fresh eggs and butter.

* * *

Their idea is quite original in having opened a direct market for the sale of Fresh Eggs to the consumer. Poultry raisers of several States are sending them their eggs to sell and are now receiving better prices then ever before.

* * *

This same plan could be carried out in other cities if the poultrymen would club together and work together. The advantage would be theirs in receiving the highest prices always for reliable goods. Quality will always find a buyer. Certified quality is established with their success assured.

* * *

Mr. Jas. Russell, Toronto, Ont, has again been elected a member of the Provincial Parliament. His Government duties along with his breeding of White Wyandottes and Rhode Island Reds of the quality he has shown and were with this season at Guelph, Boston and New York should almost be enough to keep any one man busy.

* * *

When writing advertisers always mention Everybody's.

* * *

Both Pennsylvania and New York State have lately issued some valuable Poultry Bulletins. The former written by Mr. W. Theo. Wittman is one of special interest. Entitled-Increasing the Winter Yield of Eggs, being sound and practical. We thank Mr. Wittman for copy.

* * *

Come up, April, through the valley,
In your robes of beauty drest,
Come and wake your flowery children
From their wintry beds of rest.
Come and overblow them softly
With the sweet breath of the south;
Drop upon them, warm and loving,
Tenderest kisses of your mouth.

Ask gently but firmly for Everybody's. It will always give you the News, seasonable articles and carrv only Guranteed advertisers. Everybody reads Everybody's, and wants it too. Tell your Friends.

We would like to have a picture of Colonel L. P. Graham at this time.

He writes that he is the busiest man in Steen States and we believe it by making just our exception. We congratulate Mr. Graham on our beautiful cover design and his other work as well as for making true, like-like illustrations of birds etc. is second to none other. All his work will be shown in Everybody's

* * *

Our Special Departments should interest all, that is our intention, look them over and send us articles and notes that will help to make them popular favorites.

* * *

Who says this country is not prepared for War? The President has just named three new admirals.

* * *

Mistakes of the Japanese who thought Milwaukee was a German city was a perfectly natural one. We know of a man who once took a large swig of applejack, looked at a status of Venus and thought New Jersey was the Garden of Eden.

* * *

When our full force gets broke to harness and agoing at a natural stride—Well just wait and see us then.

* * *

Mr. Len Rawnsley of Orpington farm did his first Judging at New York, and did most excellant work, there was not a complaint registered against him. We are always pleased to see the Younger Judges succeed and are glad to compliment them.

* * *

We have had dozens of letter asking us to continue our "Chick-Chats" in the A. P. J. and only regret that we cannot comply, I suggest that all friends will subscribe for both papers, send in $1.00 and get Everybody's and the A. P. J. both for the year, this is a special offer worth considering.

* * *

Hope to meet you and thousands of New ones again next Month.

Orpingtons at Madison Sq. Garden, New York

Special Report on the Orpington Classes at the Late New York Show

By Frank Conway

The Orpington classes were one of the centre of attraction as is nearly always the case, each year the qualtiy at this Imperial show improves and this year was no exception to the rule in fact, we have never before seen such a nice showing of birds especially the Buffs, Blacks and Whites, there may however have been more exhibits in certain classes in former years but, the deficiency is no indication that these varieties are becoming less popular but, is due to the fact that the dates of the show fell at a time when most breeders had their pens mated for the production of next years winners, necessitating certain exhibitors to make less entries than in former years. The ever popular Dick Oke of London, Canada who has on so many occasions, adjudicated at this all important fixture was down to judge the Whites, Blues and A. O. V. Orpingtons whilst Len Rawnsley formally with the Aldrich Farms received his initiation as one of the judges at this Imperial show and handled the Buffs and the Black Orpingtons, his vast experience however held him in good stead and both he and Mr. Oke are to be congratulated on their selections. Smiling faces among the exhibitors was a sure indication that universal satisfaction had been given.

In the S. C. Buff Orpington classes many exceptionally fine specimen were to be found with honors fairly well distributed. In cocks Hugh A. Rose lead the way by winning 1st with a large and excellent shaped bird, sound wings, clear tail, very rich under-color. 2nd Sunswick Farms possessing splendid soft even surface color, sound throughout just fails in size to winner. 3rd Sunswick, also good on surface handles well, 4th. and 5th. Owens Farms. Both extra fine birds.

In hens 1st. and 3rd. went to Owens Farm, winner has splendid Orpington type, nice width of saddle, even surface, 3rd. not as even as winner but good shape, undercolor, and flights. 2nd. Hugh A. Rose very similar in type to winner of a rich even golden buff color, very good undercolor. 4th. Seitz;-5th. Sunswick Farms. A rich quality class.

Cockerels;—1st. and 3rd. Owens Farms winner has very good even surface color, is sound under-color and good head. 2nd. Sunswick Farms very typical cockerel, with good back proportions shade darker than winner but even throughout. 4th. Seitz;-5th. Hugh A. Rose.

Pullets;—1st. Sunswick;-Excellent type, very nice pleasing color of the soft shade of buff 2nd. and 3rd. Hugh A. Rose former very level golden buff color deep buff under-color nice length of back, 3rd. very similar but younger. 4th. Foxhurst Farms. 5th. Sunswick.

Pens. 1st. Hugh A. Rose grandly matched pen male standing out for shape and evenness of color with four yearling hens of the soft shade of buff color, excellent in shape and size. 2nd, 4th, 5th. Owens Farms;-Former a nicely matched pen on the darker order, male even surface and of good type, females all very similar to each other neat combs, nice surface color. 3rd. sunswick Farms;-4 excellent females of nice soft color one probably not quite so even as the rest, male has color and very sound under, fails to leaders in shape however.

Blacks;- S. C. These classes brought about the finest lot of specimens ever shown at any show to-date.

1st. Cock;-Hugh A. Rose very massive and well proportioned bird correct carriage, back color excellent. 2nd. 3rd. 4th. Foxhurst Farms, former excells in fullness of breast is very massive and of excellent color 3rd. not just so full in front but of excellent body proportions and best of color. 5th. Wendover Farm.

Hens 1st. and 2nd. Foxhurst Farm; Winner has color, good full front, in excellent condition. 2nd. large also excellent in color, neat comb, good eye. 3rd. Hugh A. Rose medium length of leg correct back formation full front, good color head and of good size. 4th. Foxhurst;-5th. Lllangollen Farms.

Cockerels:—1st, 2nd, 4th, 5th, Foxhurst Farms:—Winner has wonderful front, depth of body, head eye, superb color, second we liked much, has correct formation of back carried well through very similar in other respects to winner. 3rd. Hugh A. Rose excellent color, very shapely neat comb, sound eyes, not so massice as winner.

C. N. Myers, Box E, Hanover, Pa.

Pullets:—1st. 3rd. Foxhurst Farms:—Winner has excellent color low set neat comb and good eye, triffle short in back. 3rd. very shapely and good front has good color. 2nd. Hugh A. Rose has size, splendid shape, excellent width of back throughout, good color. 4th. Foxhurst, splendid type, ,and good color we liked. 5th Foxhurst.

Pens. 1st. Foxhurst. Well matched and large typical shaped birds with a massive and well proportioned male A good pen. 2nd. Hugh A. Rose also well matched good in size, excellent color, male very large full front. 3rd. Llangollen Farms 4 typical shaped and good color females all good in head points, male good but stands a trifle high. 5th. Clark.

S. C. Whites. Honors fairly well distributed with winners excelling in shape and color. 1st. and 3rd. Aldrich Farm;-Winner has wonderful front, good width of back which carries right through color of the best only fault course head. 3rd. Excellent in white, well proportioned body, in good condition. 2nd. Warner and Greene;- Splendid color, has good full front, and nice size, 4th. and 5th. Owens Farms. Two Typical birds in fine color.

Hens;-1st. Christie;-Hard to find fault with, has splendid shape, good color, well finished in back portions. 2nd and 3rd. Cooley both have excellent color, are large and well balanced not in such good condition however as winner. 4th. Yards;-5th. Owens Farms.

Cockerels;-1st. Aldrich;-Very similar to 1st. cock and shown very fit. 2nd. Cooley has excellent shape, very white in color, just fail in tail 3rd. Heatherwood Farm;- Good color, well balanced throughout except trifle pinched in tail. 4th. Owens Farms;- 5th. W . Moore.

Pullets;-1st. Warner and Greene;- Splendid width of back pure white color, neat head full breast. 2nd. Rogers;- large, and excellent color, just breaks at base of tail. 3rd. 4th. Owens Farms;- former, has supberb color, very nice shape, fails in head.

Pens;-1st. and 3rd. Owens Farms;- Winners stand out for color well matched and put down in excellent condition. 3rd. just as good in color but not quite so nicely matched however. 2nd. Moore;-very large and shapely, an excellent male, a good pen, 4th. Jilt Yards;-

Blue Orpingtons;- These classes fell down in number to former years due no doubt to the Club show being held at Boston five weeks previous to New York Show. In cocks Haldie Nicholson won 1st. with a splendid shaped and well proportioned bird probably a trifle too dark in color. 2nd. Mc. Kee rather smokey in color but of good type.

Hens 1st. Nicholson Correct shade of color, good in type. 4th. Mc Kee former has not the color of winner but is good in type and large, 3rd. Roecker, good color and of nice size, fails in shape to winners.

Cockerels 1st. Nicholson;- Very nice color, has good proportioned back if anything could be improved in breast. 2nd. Brucecroft Farm;- not so large, but has excellent color and is quite a good bird;- 3rd. Mc Kee fair color off in shape.

Pullets;- Brucecroft Farms;- 1st. Very nice color and a good type. 2nd. Nicholson large with a nice full front good color but tapers off too much at stern. 3rd. Brucecroft Farm;- Color very similar to winner only fails slightly in type. 4th. Mc Kee 5th. Ideal P. F.

Pens. Brucecroft P. F. 1st. 4 excellent colored and well mached females with a splendid colored male just lacking in breast. 2nd. McKee quite a nice pen although not so well matched as winners.

EGGS For Hatching
Season of 1915.

Never before have I been able to mate up so many wonderful birds as I have in my pens this season. If you truly want to raise birds that cannot be surpassed by any in the country, birds that will surely win the blue for you at your show, you must have some of my eggs. I have won the very highest honors possible at such shows as Madison Square Garden, Boston, Philadelphia, Cleveland, Indianapolis, etc., and all my birds are directly descended from my famous winners. I will positively sell you eggs from the very best matings I have, and you will get the eggs that you pay for. My mating list will give you a full description of all my pens and I will be glad to send it to you.

New Jersey Notes

BY

J. HARRY WOLSEIFFER

The first meeting of the new executive board of the New Jersey State Poultry Association will be held at New Brunswick, April 3rd. There will be twenty-one members, one from each county. This gives each county a voice in State matters.

With a membership of over four thousand, the new Association figures given by S. T. Campbell, Secretary of the American Poultry Association.

Rufus Delafield was elected from Middlesex, Elton Stryker from Mercer, W. S. Long from Glouster, Louis G. Heller from Cumberland, Mr. Fish from Union, all strong men, which will help guide the biggest state association in the union.

It was pleasing to note the "give and take" of these powerful associations exhibited at the meeting in which both associations gave up their rights to become one powerful body. For a number of years the State Branch, while small in numbers, accomplished much work for the poultry interests in New Jersey. Never numbering more than two hundred, there were in the ranks faithful workers. The federation of newer birth, under good management grew by leaps and bounds, until at the meeting in which the two associations combined, they had a membership of 4,000, with this combination working together under the new constitution and by-laws a great good can be accomplished in the "Skeeter" state, for better poultry and more of it.

In few states are the poultry raisers in closer touch with the experiment station and its working force, than in New Jersey. This is as it should be and the New Jersey Experiment Station has accomplished a wonderful lot of good for the poultry keepers of that state.

There are five poultry associations in Cumberland County, but the "give and take spirit" was ever uppermost in the members minds, and the two Vineland Associations, with voting powers to elect, indorsed Mr. L. G. Heller, of the Bridgeton Aassociation, to represent Cumberland Co. Mr. Heller has always been a hard worker for New Jersey Poultry interests and the members recognized this fact.

ALWAYS MENTION

N. J. STATE POULTRY ASSOCIATION.

Committees for 1915.

President J. Harry Wolseiffer has appointed the following committees to serve during 1915:

Publicity:—Dr. Gilbert Johnston, 210 Market St., Paterson, N. J.; Louis P. Graham, Vineland, N. J.; E. S. Stryker, Trenton, N. J., R. F. D. No. 2.

Legislative:—C. J. Fisk, 35 E. 30th St., N. Y. C.; Rufus Delafield, South Plainfield, N. J.; C. C. Luhrs, Toms River, N. J.; H. J. Woodward, Newton, N. J.; W. P. Lang, Woodbury Heights, N. J.

Educational:—C. D. Cleveland, Eatontown, N. J.; Wm. D. Ridgeway, Vineland, N. J.; Jas. L. Adams, 101 Union Ave., Irvington, N. J.; Thorfin Tait, Metuchen, N. J.; Wm. Huntermark, 157 Main Ave., Passaic, N. J.

Co-operative:—Victor G. Aubry, New Brunswick, N. J.; A. L. Clark, New Brunswick, N. J.; Harvey E. Rodgers, Trenton, N. J.! Harry A. Gardner, Millville, N. J.; A. A. Keller, Lakewood, N. J.

Leghorns at M. S. G. New York.

Continued from Page 66.

There were twenty-two pullets, not as large as last year, but as a whole running more even in quality, but none up to the standard of the first pullet in 1914. The first pullet was a typical leghorn pullet of good color, with nice back and six point comb, shown in the pink of condition. The second was also a nice white pullet with four point comb, well up on her legs and a winner in ordinary classes. The fourth a pullet of about the same type as third, four point comb, good tail in fact a good all round bird, but not shown in as good condition as the preceeding birds.

There were eleven pens most of which showed good quality. The winning pen was in a class by itself, with a very nice shaped white cock bird possessing nice five point comb. With him were four females as near alike as four peas. This pen was well mated and shown in good condition. The second pen was headed by a cock bird with a six point comb, a good all around breeder mated to four good hens with nice heads and well shown. The third pen was headed with a cockerel which was good in color and good head points, but legs too long giving him a stilted effect, he had four very nice conditioned females and lost to second pen through with cock bird with five point comb, a very good male of medium size, hens not up to the quality of pen number three. The fifth pen was also headed by a cock bird with a five point comb. He was a little low on legs, his females were of good color but rather small.

RESSEQUIE'S Barred Rocks

Win at the National Barred Rock Club Show Pittsburg, Pa. Jan 1915—Cock 1-3. Hen 6-7. Cockerels 1-5. Pullets 2-3. Pullet Bred cock 1. Cockerel 1-3. Cockerel Bred Hen 1-3. Pullet 2-3. Old Pen 1. Young Pen 2-3. Cockerel Mating Pen 1. Best Display. President Cup. Best Display in Show, Councilman Cup, Champion Male, Shape Male & Female. Etc.

Eggs $5. Per Setting, Stock for Sale. Mated Pens and Trios a Specialty.

S. C. Brown Leghorns At Buffalo N. Y. Hen 1-4. Cockerel 4-5. Pullet 2-5. At Rochester Hen 2-3. Cockerel 1-2-3. Pullet 1-2-3. These winners and a Select lot of breeders for sale. Special prices on choice Breeder of both varieties; write me your wants.

L. B. RESSEQUIE, Box E. Millers, N. Y.

Report on the Light Brahmas at New York

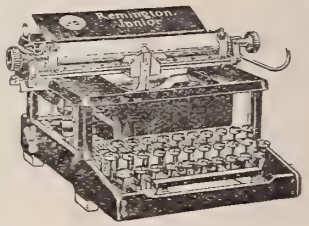
The Cockerel and Hen Classes — By Judge Rankin

There were 32 hens in the class. On the whole they were a fine lot. The first hen was a splendid Light Brahma. She had shape, size, surface and undercolor. She was rather over fat and did not stand well in the coop at times, but when she did stand right she was about my idea of a Brahma. She was not weak in any section. I liked her length. Her under-color conformed to the new Standard requirements. She was awarded the special for the best colored female tail. There was little difference between second and third hen. It was about a toss up, in my opinion. Some liked the third hen better than second. Second hen was not in quite the best show condition as compared with the third, but she was much like her in shape and color and was much better in undercolor. In fact, while I hope I do not over estimate the value of of under-color in a show bird, yet it was under-color that gave the second bird preference over the other. Third hen was awarded special for best shaped female. She was a beautiful bird, ideal in shape, with a beautiful spread tail and shown in the pink of condition. Both second and third hens were inferior to first hen in size. Fourth hen was a beautiful specimen in color, with plenty of size, but did not equal the other winners in shape of back and tail. Fifth hen was good enough to win in almost any competition. She was a grand bird in type, but did not appear to be quite strong enough in color. She was evidently past her best show form for this season. There were three or four other hens that it seemed a pity not to be able to award a ribbon. Some of the others did get some of the numerous specials. One hen that I liked particularly well was owned by House, who was first on pullet. This hen unfortunately had an unfinished wing.

Forty two cockerels made up the strongest class in Light Brahmas. It was said to be the best cockerel class ever seen in this country. There were at least a dozen to 15 cockerels it would have been a pleasure to honor with a prize ribbon. The new requirements as to back and tail color are causing some trouble naturally in males, and some of the cockerels, excellent otherwise, failed

First cockerel, in my judgment, was an easy winner. He was the best I have seen, and it was frequently remarked that he was the best Light Brahma male so far shown in this country. If he failed anywhere it was in having legs of not quite sufficient length. I could have asked for no other change in him so far as type is concerned. In comb and head, in leg and toe feathering, in length and sweep of back, in elevation, length and spread of tail, he was surely good enough. He was also a modern Light Brahma male in color. Indeed he was very fine in color, though I liked two or three other birds better in this respect. One of these whose color I preferred was the second cockerel, to which Mr. Balch and myself gave the male color special. This was also a fine bird in shape, but he did not show himself to the best advantage in the coop. He approached my ideal of male Light Brahma color. Possibly he might have been a little better finished in the matter of striped tail coverts. The third cockerel was another good one, with lots of size and quality. He was a trifle old fashioned as compared with first and second cockerels, but he was a good one. He stood on two legs of a length that I liked. In color he was inferior to the second cockerel. Fourth cockerel was somewhat immature, but a bird of splendid type, and of excellent color. The fifth cockerel was a large, showy bird, in prime show condition. He was not quite as smooth as I should like, but a stylish bird of good quality. I recall two other cockerels in particular which I passed up with some hesitation, one shown by Barton, the other by Wood. There were, moreover, a dozen others that would have been sure winners in almost any show.

Remington Junior Typewriter



As durable as the Standard Remington. Weight less than half the standard model.

Authors, clergymen, physicians, students, and others wanting a compact, small, reliable typewriter will welcome this machine as solving for them the typewriter problem.

Price, with dust-proof cover, **$50.00.**

For $55.00 we will sell you a Remington Junior on terms of $5.00 down and $5.00 a month.

The American Domonique

The Old Speckled Hen on the Old Home Farm By A. Q. Carter

The "blood" of the genuine "Dominicker" is the bluest of the blue in the poultry society of America. The name appears in early ancedotes of the settlers; in the writtings of Whittier, Billings and others, and even lately in Al Jennings' vivid account of his outlaw days published in Saturday Evening Post.

There are real reasons for these references to this particular fowl. It is because of their remarkable ability to take care of themselves and their young, their usefulness in producing under any circumstances; their adaptability their natural fearlessness; their exquisitely flavored eggs, and the rare quality of the great flesh development they carry—these are some of the things which endear the genuine old Speckled Dominique to all the folks, past or present, who know them. The Dominique is not a fowl of the day and generation which is boomed by misguided poultry hawkers who advertise a breed for a while to make money from the unsuspecting public and is dropped from sight when the boom "flashes in the pan" and dies.

The Dominique has been here since hens were hens in this country and still keeps right on delivering the goods.

Breeds have come and gone; new ones have been made and are being made; all sorts have been and are being brought from remote corners of the globe. They have their day and are neglected. But the Dominique stays on and will continue to lay eggs and rear its young long after most of the above are forgotten. Egg laying contests will come and go; certain breeds will be touted to the great blue above; the public will read of how the great hen, Sara Ann Kehoe, laid 366 eggs in a year and earned $57,000 for her owner; and the public will bite this stale bait, and not being able to produce any Sara Ann Kehoes, will promptly have a relapse from hen fever and look away to other sources more productive.

But the old Speckled Dominicker will go right along paying a good enough profit to the owner, and the owner, who knows a good thing when he sees it, refuses to be hoaxed or hoodwinked, and sticks to a sure thing.

A gentleman living on a ranch in California writes me: "I am 78 years old. My father kept "Dominickers" on the old home farm in Connecticut in the 50's and it was there I learned to love them. So I must have them on my ranch out here. I have two other breeds, but for down-right usefulness the old speckled hen is far ahead of the others.

My hen houses are located near a brook and back of that is a tangle of bushes and small growth. Last year a Dominique hen hatched her family of 13 in a small coop by the brook; at three weeks she weaned them and went to laying. Those thirteen chicks took to the bushes at three weeks of age, coming to their coop at night only. They fed and cared for themselves and every one of them grew to a finished maturity, and the pullets in that flock laid ahead of anything on the place! Time and again I have seen my Dominique rooster go into the top of the fruit trees on the lookout for hawks and on one occasion I saw one of my old Dominique roosters tackle a hawk in the act of stealing a chick and pull a good handfull of feathers from the hawk, driving him off in quick order."

To the poultry man who wants a fowl that is midway between the lighter weight breeds and the heavy weights, I say to him, get the Dominique. The hens weigh 5 to 5½ lbs; the cocks 7 to 7½, but no more. The chicks grow rapidly and will lay under six months with decent care. The hens moult easily and without hardship, laying during the most of the moult. I have a six year old hen which begins her moult along the first of August, dropping feathers slowly, never bare, and goes to laying for the winter in November. This is a characteristic.

The hens are profitable for egg production up to several years of age. They are fine bone, carrying an abundance of plump, firm flesh, thus making an ideal table fowl.

For an all-around fowl that is rugged and hardy and feels good at all stages of the game, you have got to "go some" to beat the old Speckled Dominique!

The color of the plumage of the Dominique is two shades of nature gray-light and dark—and the whole scheme is very near the color of the common hawk. This combination is so like the general nature colorings that it serves as a great protection against birds of prey.

In shape the Dominique resembles the Leghorn, or Hamburg, although about twice the size of these birds. They have yellow legs, beak and a yellow skin.

The Dominique was the important utility foundation that was used in the making of the early Barred Rock, and the early Rock showed the same hawk-like plumage and also in a general way some of the same type, but the present day Barred Rock is not at all like the Dominique in either color or shape.

The Dominique is now and always has been kept by farmers and backyard poultry keepers who go in for plenty of eggs at all times of year and a good chicken for the table.

Our Present Day Barred Plymouth Rocks.

The Improvement Made Noticeable. By Henry D. Riley.

Do the Barred Rocks of the present day show a great improvement over the birds that were bred and shown ten years ago? Supposing this question were submitted to ten of our well-known breeders, who were active in the game ten years ago and who still are among our leaders? Undoubtedly they would all answer you in the affirmative, and then proceed to tell you of some great cockerel or pullet that was exhibited some years ago and say that they doubt if a better one has ever been shown. It may be that there was a great bird that they can recall, that stands out in their memory as a wonderful specimen, but the reason for this is that at that time this bird appeared wonderful in comparsion to what was then being shown. Yes, the Barred Rocks of the present day most certainly show a wonderful improvement over the birds of ten or fifteen years ago. The breeder who will not recognize the advancement in the presday bird, is behind the times and will find himself hopelessly in the rear, if he does not wake up to the fact that the day of the dark, smutty cockerel is past, and that the open barred, light colored female can no longer win the blue ribbon. In what sections do we see this improvement most apparent? In the male, I think we have made the greatest improvement in the surface color and in the character of the barring. Our present day winner must be of the same even shade from head to tail possessing a bluish appearance in color on the surface, and be absolutely free from brown, each bar must be sharply defined and run straight across the feather, and the day of the V shape barring is a thing of the past. In the female, we are breeding pullets every year which show the same shade of color in all sections, and we are perfecting the width of the black and white bar,, making them more nearly equal in width. A certain value is given to under-color, but I cannot agree with these extremists who seem to think under-color of vital importance, and can see nothing in a bird of the correct surface color, unless it is barred equally as well beneath the surface. While it may be possible for us to say that the birds that were shown at our largest shows ten years ago were almost the equal of those being shown today, we find that there are many more of these high-class specimens being produced today, and it is no longer possible to go to the smallest show with an inferior bird and be able to win. The breeding has advanced to such a stage where the average number of high-class specimens that are produced by individual breeders is much greater, and they are breeding much truer to the type desired. The breeder who thinks that it will not take a good bird to win the average show today, will find himself greatly mistaken, and will not be able to keep up in the procession unless he breeds the best. I am a great believer in sticking to a certain line of breeding if you see it is producing the goods, although I believe there is a certain element of luck that enters into our breeding. We have all heard of certain birds that have been great producers, and while they lived, the breeder that owned them was at the very top, and his birds were sweeping all before them, both for him and in the hands of his customers. These birds die and then what happens—do their sons and daughters keep on producing the same wonderful specimens? As a rule, they do not. I could name half a dozen cases where this has come to my notice in the past ten years. My advice to the breeder that owns a bird of this description, is to make hay while the sun shines, for to-morrow will be another day. But then this is what makes the game interesting, and we are always looking forward to the future, and hoping we may be the one whom this lightning is going to strike. I hope the day will never come when a few will monopolize the breeding of all the good ones, for if it does, our interest will die, and the breed that we all love so well, and have striven so hard to perfect, will suffer.

Monmouth Farms, Freneau, N. J. Single Comb White and Buff Leghorns have for long years been contenders for favors and for honors at shows east and west. Mr. J. C. Punderford, the Owner has devoted his best efforts to breeding and improving his lines with unusual success by placing them in the front for general quality and value. Above is shown his First Prize Pen at the Pittsburg Exposition Show, a worthy honor won in a very large and fine class.—H. P. S.

GRAHAM'S CRACKERS

This heading was wished on me.

* * *

To most of you, the mention of Vineland, N. J., carries with it the impression of the one district outside of Petaluma, Cal., where commercial poultry farming is conducted on an extensive scale. Because chickens can be reared easier here than in any other one place, a number of fancy poultrymen of prominence have recently settled in Vineland. Possibly in the near future, this locality will be equally famous as a hotbed of the finest thoroughbred poultry. Who knows?

* * *

About ten years ago, Miller Purvis threw as fine a fit regarding unretouched photographs as the sage of Silver Lake is doing now but it petered out just as this will. The breeders of the country will no more stand for snap shots of their winners which have cost them a year of constant effort and study to produce, than will the fond mother stand for such a picture of her baby.

* * *

We freely agree with Dr. Woods that the retouching has been overdone, but only by the clumsy and less skilled. A few have tried for many years to become proficient but have lacked first the knowledge of the fowls and secondly the abilities to pose and photograph a specimen in its best shape. These have retouched with a free hand, faked to be exact and have one by one discontinued the effort to produce good poultry pictures and gone into some other line of work for which they were no doubt better fitted.

* * *

John Robinson in the current Farm Poultry, defined a fancier in a new way. (One who breeds poultry, not from mercenary reasons alone") I would define a real poultry artist as one who makes pictures not for mercenary reasons alone and you can count them on the fingers of one hand and not use all the fingers.

* * *

It takes the "Teds" to run things in Chicago. First "Ted" Hewes and his Colesium Show. Then "Ted" Roosevelt and the Bull Moosers, now it's "Ted" Hale and the fancier show. Shall we say three of a kind? I'll leave it for you.

* * *

If Herman Schemmerhorn, Oscar Blaatz, August Suibblebaum and Adolph Schuitzlefinger formed a partnership, what would the firm name be? H. P. Schwab in "Chick Chats" has taken five or six months to answer this query, but you have it in this issue of Everybody's.

* * *

In times of peace prepare for war. Get ready poultry breeders. Hatch all you can for their is "big business" coming next fall and winter.

* * *

Prospective Syracuse, Hagerstown and Allentown winners are now hatched. The ambitious breeder is watching his little chicks for their first sign of blue ribbon quality.

* * *

The time is near when eggs from a 240-egg hen, descended from a hen of a like laying power and sired by a male from an equally good layer, will sell for $1.00 each. Why not?

* * *

As soon as our utility man established pedigreed lines of layers, which by several years of experience proved that they will reproduce their same qualities, just then their eggs will be as valuable as are the eggs from famous pedigreed lines of winning fowl and the chap who combines high powered egg production with highest class show qualities, is going to get the most for his product. It takes longer but it pays.

* * *

Many grade cows produce as much milk and as high percentage of butter fat as the best pure breds, but their calves sell for five or six dollars and the thorough bred calves for from fifty dollars up. In both instances, feed, housing, care, etc., are the same, but the profit from thorough breds is far the greater.

* * *

The present day breeder, who is endeavoring to raise the quality of his flock, either in Standard requirements, or in egg production, finds the trap nests absolutely necessary. A few years ago the trap nest user was considered a mild form of crank. Today it is much as necessary a part of the equipment as is the breeding stock.

* * *

The day of haphazard matings is past. No longer can the breeder hope to maintain his position as a leader in his variety by simply mating his best birds together on account of how each hen breeds. Plenty are still using the stone age method, but beware of the man who buys your stock and uses horse sense and the trap nests. He'll beat you.

* * *

The ability to successfully raise poultry is a gift. The men who have made great and continued successes with poultry are talented men. They have what we are beginning to call "natural chicken ability".

* * *

There are hundreds of men and women working to-day in the great cities, who possess this ability, but it is as yet undiscovered. On the other hand, there are many more now engaged in the poultry business who are handicapped by the lack of it and it is only a question of time before their ill success will force them out.

* * *

You can no more make a chicken man by all your college poultry education and all your practical experience on a poultry farm, than you can make a finished musician or renowned artist if any of them do not possess natural ability.

* * *

The head of a poultry college said last winter, that of his seventy or more students, he was going to be satisfied if he turned out one "chicken man" and further qualified this by adding that that man would possess the natural ability to successfully rear chickens.

* * *

It is lack of natural abilities which safe guard the leading breeders when they sell broad cast the eggs from their best pens. Not more than one in a hundred has the natural ability and the "know how" to raise them as good as the master. Once in a while this hundredth man turns up and tumbles the master from first place.

* * *

We have always heard considerable kicking among the "little fellows" who buy eggs from a leading breeder's best pens and then raise a lot of second class stock. The little fellow blames the big man crooked in every way, from faking his pictures to not sending the quality of eggs that were paid for. Be still little one, the fault is yours, you don't know how to raise them, that's all. You are not the hundrdth man. If you were, you would have no kick and would be fighting Mr. Big Breeder for leading honors in a year or two.

The Production of Hatchable Eggs

How to Produce Eggs That Will Hatch and Produce Strong Vigorous Chicks

By E. M. Long

Now that the pens are mated up, the important question that should be in the minds of every breeder and poultryman who is selling eggs for hatching or is saving eggs to hatch himself, should be-How to produce eggs that will hatch and produce strong vigorous chicks.

With the breeding stock confined in limited quarters and being fed a variety of grain only, we are not apt to secure any large hatches nor are we apt to get chicks that can withstand the trials and tribulations incident to the life of the ordinary chick. I have had considerable experience in buying eggs for hatching as well as selling them for the same purpose and even though eggs are hatching well at home, they do not always turn out a favorable number of chicks when shipped to some patron by express or parcel post. We will not go into the matter of transportation, at this time, however, but will deal only with the care and feed of the breeding stock. They must have health and vigor as it requires health and vigor as well as indivdual excellence to win in the show room. The health of their birds is no doubt up to the average, but some of these breeders have failed to do one thing. They have failed to take Nature into their business as a partner. After a number of years in the business of raising stock, producing chicks and mating and producing eggs for hatching, I say that we must follow closely along Nature's footsteps if we would be successful.

Let us see. The ordinary hen under natural conditions, will not lay a great number of eggs in winter, nor will the eggs she does lay during Jan. Feb. and March show any great fertility or hatchability. Why? Because this is not Natures season for the production of her young. Late March, April, May June is Natures time. When the weather warms up in March, the ordinary hen gets down to Motehr Earth and begins to dig out the fresh blades of grass. This she continues as long as it is possible to secure these blades in a tender state. With the warm rains of the latter part of March and April, insect life begins to flourish. The hen takes advantage of this and scours the range for worms, bugs grass hoppers and other insects. Now no matter whether she has been laying or not and regardless of whether or not the eggs she has laid have been fertile, if she is provided with a proper mate, she will now lay and the eggs will practically all show strong fertility.

This is the reason why farm range flocks usually lay eggs that hatch well It is not through any superior management or care which may be given them, but just Nature showing her inflexible laws which must not be disregarded if we would get results in hatching. Now then, a breeder who keeps, two, three, four, five, ten or a hundred pens of birds, mated to the best of his knowledge to produce standard excellence, cannot possibly let his birds out on free range. The best he can do is to give them large runs and these after a time get low on Natures supply of the elements to produce hatchable eggs. There is just one way to help Nature out and thus to a great extent substitute what is lacking, that is insect life and fresh tender blades of grass. Green cut bone, fresh meat scraps and com mercial beef scraps, fed in reasonable quantities with other grain feed will furnish the substitutes for the insect life which is lacking. Sprouted oats sprouted grains of other kinds wil furnish the substitutes for the tender blades of grass that are missing from the runs. These substitutes will also serve to a great extent in producing eggs that will hatch and chicks that will live and grow in January Febuary and March. Every breeder who hatches eggs himself and every breeder who sells eggs for hatching as well as every farmer or poultryman who does not have facilities for allowing his flock free range, should have an oats sprouter. They are not difficult to construct if one has a pattern to go by, butthey sell at very reasonable prices and should be part of the equipment of each and every poultryman. Every farmer and every poultryman should feed meat in some form the year around, even if their stock have free range, as it will help Nature increase the egg yield.

BY

MRS. IRVING F. RICE

The Feeding and Raising of Chicks.

Again the peep of the little chick is heard through-out the land, and it is a welcome sound to most breeders not with-standing the fact that it means long hours and unceasing vigilance for long weeks, To the genuine fancier breader it is always a delight to watch the work of nature evolve from the egg to the dear little downy chick in such a short time. Although we have hatched many thousands of them on "Sunny Bank" the experience is always one of interest, and the housework is apt to suffer neglect upon the days when the machines are hatching, There is no period in the life of a fowl so interesting and when I love them quite so much as I do the first few days of their lives. They must be handled very carefully the first few weeks and their diet must be very carefully considered as well as the temperature of their homes, so much depends upon the start they get, a bit of indiscretion either in diet or temperature must be paid for, So it behooves us to study the subject carefully, much has been learned from experience, but it seems to us that it is an endless subject, each season brings up its problems entirely unlike others with which we have come in contact, and it is only the amateur who ever thinks he "knows it all." We have learned that it takes a very wise person to know how little he really does know, and that average applies to chicken raising so perfectly that we are inclined to think it must have been written by a poultry breeder, Perhaps it is because there is so much variety in the work that makes it so ineresting, there is very little monotony in this particular business it is from one thing to another all day, first the baby chicks then the adult fowls, the care of the incubators and then the marketing of the products, all requiring skill of entirely different natures, very much different from the everlasting routine of house-work, which means exactly the same thing 365 days in the year, meals to get, dishes to wash and beds to make, so I say that where it is practicable for the house-keeper to assist in the care of at least a small flock of chickens, it is better than a spring tonic for the system, it takes one from the stuffy rooms into the blessed sunshine and health giving fresh air, and affords a delightful change from the indoor work, and although we may be convinced that we have "just all that we can accomplish" now someway we will find time to care for the dear little baby chicks and with their growth the interest will increase, untill we will return to our real inherited work of home-making with new zeal and energy and find that we have more than made up for the time spent with the chicks, and with better grace and stronger nerves have completed the work of the day.

We are expecting our first chicks this week and are now busy making preparations for their coming, no brooders are used but heated colony houses. The most of which are heated with the gasoline heaters recomended by the Cornell College of Agriculture, we have a few stove heated houses which are used for the first chicks and which are very good for early use, but not as satisfactory later when the out-side temperature is warmer.

Our expected babies will now be placed in one of these stove heated houses and later moved to a gasoline heated house, thus giving this house to newer arrivals, who require more heat, this house or houses to be used for the expected chicks has been entirely renovated, by thoroughly scrubbing over-head, sides and floors with a solution of Zenoleum, which is a coal tar product and which is a splendid disinfectant and insecticide, the house is kept closed for a day or two and then opened and dried out well, new oil cloth is placed around the hover to fool the poor orphans into believing they are under the shelter of their mothers wings. We have learned that oil cloth is preferable to the felt which is usually placed around the hovers, in that it does not ravel nor pull apart easily, we have lost chicks by their getting tangled with ravelings, and still others have possessed such unnatural appetites that they have literally consumed little by little, the loosely woven felt which is usually used for this purpose, it may be that this will not prove disastrous to the little fellows but I do not believe there can be any real nourishment, consequently they must be better without it. After the house has been well cleaned and dried and the floor is covered nicely with fine chaff under which a thin sprinkling of fine sand has been scattered, then the fire is started several days before the building will be occupied, so to make sure that the fire will be regulated properly, this stove is controlled by an automatic regulator, working like the thermostat upon the incubator, and can be regulated to the desired temperature. We build sort of a fence

around the hover for the first days, thus keeping the youngsters within the fold as it were, until they know enough to run under when they are cold. The corners of the building are taken care of by nailing boards across them, a chick seems to have a natural love for corners and will pile up on each other in a corner and smother, when they get chilly, and before they have learned from whence cometh the heat.

The chicks are taken from the incubator at the age of about 36 hours and a very little chick food or johnny cake is given them, along with their first lesson in eating, donot give them a drink until the next meal and then watch out that they do not get too much or get drowned in their frantic rush for their first drink. We only leave the drinking fountain in for a short time and never leave it in when we must leave them alone, after a few days they will learn what some men never do, to drink moderately, and then always keep fresh water before them. There is a variety of first foods which are fed successfully some use the infertile eggs which have been tested out and hard boiled and finely crumbled, we have never had the desired results with this food nor with bread and milk which is also fed by some, our best results have always been obtained with a johnny cake, which we would feed entirely were it possible to make it for so many, this johnny cake is made by using two parts corn meal, one part wheat feed and bran mixed with skim milk into which a pinch of salt and about the same amount of soda has been placed which would be used in a table johnny cake, this is mixed so thick that the hand is used to pat it smoothly into the pan, and is baked for hours in a slow oven and in a very deep pan, when it is at last taken from the oven a very thick crust will have formed, it is then inverted upon a clean board and allowed to steam until the crust has become moistened and the whole mass will crumble nicely, the chicks are very fond of this and being a well cooked food we have never had a case of bowel trouble resulting from it, after a week the beef scrap is included, and so each gets the allotted amount. After they are nicely started a meal of prepared chick food or a home made chick food as the case may be is given alternatly with the johnny cake, and finally cracked wheat and corn is given the chick food, the first rule to be remembered in the care of little chick is to "Feed little and often," do not let them fool you into thinking they are starving because they run after you, this is good exercise for them and they are much better a bit hungry than over-fed, just a very little scattered in the litter will keep them happy and busy for several hours we start feeding them five times a day but soon feed them only three times a day,, and this rule is continued until they are half grown and on free range, when they are given their hoppers and fed twice daily. Always keep plenty of fresh clean water, with emphasis on the clean, before them.

We also give them all of the sour clabbered milk that we can spare, and believe that the acid contained in sour milk and buttermilk is a splendid cure for the germ found in white diarohea, and ordinary bowel trouble, perhaps a few words in connection with this foe to small chicks might prove a help. Too much heat or too little heat will cause this trouble as will too much food or filth in any place, there are so many little details which of themselves seem very unimportant, but which really spell either success or failure, that must have our genuine attention if we expect to make good.

A few drops of black ink, mixed with a teaspoonful of olive oil, will clean black kid gloves. Apply the mixture with a feather and dry in the air.

* * *

Milk will never burn if, before heating, a little cold water is put into the saucepan and brought to the boil. Heat the milk in the usual way.

* * *

If a broom is given an occasional soaking and stood out in the open to dry it will last twice as long.

* * *

A spoonful of methylated spirits added to the rinsing water gives a silk blouse that delightfully glossy look.

* * *

When mashing potatoes or other vegetables, never use cold milk, but hot; then they will be light and fluffy.

* * *

If a little salt is sprinkled in the bottom of a frying-pan the fat will not splash over the stove.

* * *

To clarify lard for frying purposes, heat it thoroughly with several slices of raw potato and strain it.

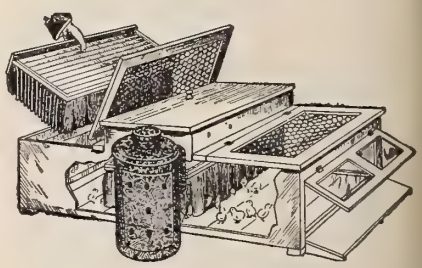
Chick Saver



The "BUCKEYE"

KANT KROWD KLOSE KONTACT

Brooders and Hovers

Most wonderful artificial mother ever invented. Over-crowding, over-heating and suffocation absolutely impossible.

The only hot water brooders and portable hovers that have been approved by the National Board of Insurance Underwriters.

You can raise chicks in zero weather with the "BUCKEYE" Kant Krowd, Klose Kontact Brooder. Every chick kept warm and cozy without crowding.

Save the 40% That Usually Die

Get full profit from your incubator by raising every chick! Steady, uniform heat with perfect ventilation. No foul odors. Klose Kontact for every chick—Nature's way. The "BUCKEYE" Kant Krowd Klose Kontact pays for itself in a short while by the chicks it saves from death.

You have only to see these brooders in order to realize their wonderful possibilities.

Write for our catalog of "BUCKEYE" Incubators and Brooders, also name of nearest dealer. Do this today.

Everybodys News From Everywhere

BY

JAMES T. HUSTON.

That the new organization framed at Harrisburg last month will be of untold good to all poultry interests in the State, is the universal opinion. An organization such as this, with Mr. Weimer and Mr. McGrann at the head promises great things, and we believe that the coming months will show renewed activity along all lines.

It is almost certain that Scranton, Pa. will again hold a show during the coming Winter, in fact plans are already in operation towards that end. It was with regret that the poultrymen of that City found it impossible to hold a show the past season, but it was felt that it was best to omit the exhibition for one year. The fanciers are alive in that section, and cannot allow another season to pass without a "Quality Show."

Along this line would a suggestion be allowed? Wilkes-Barre twenty miles away put on a grand exhibition the past season; why not Scranton and Wilkes Barre fanciers unite for one grand mammoth exhibition, making it one of the largest in the Country? To our mind nothing would hinder these two Cities from giving to the fanciers of Penna. a National Show which would do the State credit.

Tyrone, Pa. is making preparations for a show in late 1915 or early in Jan. 1916. This section of the State is alive with poultry fanciers, and we believe a show would be welcomed, giving the fanciers an opportunity to exhibit the cream of their breeding.

Now get busy with your chicks, those which are hatched at this time with proper rearing will be ready (if of quality) for any of the early Fairs. Those which you will bring to the light of day during the next two months will grow into sturdy specimens for the later shows. Every egg you set, set with the reasonable assurance that it will hatch and grow into a Standard quality fowl. Make quality your motto, and breed towards that goal. Better hatch twenty-five chicks from birds of proper breeding qualities than a thousand from a slip-shod mating.

Under the new organization of the Lycoming Co. Fair Association, the exhibition next Fall will be held along new lines, making it of greater interest to all. A charter has been asked for from the Governor authorizing a capital of $15.000. The shares of stock will be sold to a great number of Lycoming Co. farmers. As this is the only Fair held in this County, every effort should be put forth towards making this one of the best Fairs in the State. For years this Fair has been held at Hughesville under the auspices of the Muncy Valley Farmers Club.

Speaking of combining Poultry Shows where they are held in Cities or Towns near together, why could not Altoona and Johnstown in this State combine for one exhibition? Few Cities in the Country have a greater following of poultrymen than is found in and surrounding both Altoona and Johnstown, and with the combined strength of these two organizations a wonderful Show could be held, and one which would attract exhibitors from all parts of the East.

While sprouted oats is one of the very best of green feeds, mangles, make a variety and are relished fowls old and young, as well as making a variety in this form of feed, being cheap in price, it should be considered by those who wish to make their poultry pay.

We would like to hear from Mr. Theo. Wittman regarding the dates set for the San Francisco Exhibition also from the managers of the other Fall Fairs of the East and Middle West. Before you vote for your Specialty Clubs National Meets to go there consider whether or not these dates are going to interfere with the Fall and Winter Shows. We think a great harm will be done the Fairs and early Winter Shows if the poultry exhibition is to be held at San Francisco on dates that conflict with these old established Shows.

Don't wait for the hens to want to set if you wish early chicks. An incubator is absolutely necessary where you expect to hatch any great number, and now is as good a time to become use to running one as later. A few years ago it was almost impossible to get a machine which proved reliable, to-day almost all the standard makes prove satisfactory.

The wise poultryman is one who knows that cleanliness is next to godliness; especially is this so in the caring for your breeders. A mistaken idea that lice and mites only appear during the Summer months,-they are like the poor they are with us always. Get rid of them, and when you are rid of them, go after them again. Many a successful breeder has met his waterloo through these pests.

Truly a great "bunch" of fanciers-those who met at Pittsburgh Show, all seemed to be having a great time, and enjoying all features of the exhibition. One Show at Pittsburgh is enough, but it should be a hummer in number of entries as well as attendance etc.

We trust Mr. Henry D. Riley Pres. of the Philadelphia Show can be persuaded to again take charge of this show. While it is true that some one else usually can be found to take anothers place, those most familiar with Philadelphia's way, know that Mr. Riley's successor will be hard to find.

In the selection of Mr. T. E. Quisenberry of Mountain Grove Mo. as superintendant of the Panama-Pacific International Poultry Show at San Francisco, Cal., a man has been selected whom will do credit to the poultry interests connected with this big undertaking. Mr. Quisenberry has had wide experience in the management of poultry exhibitions and is one of the best known poultrymen of the Country.

The Panama Exposition Show can be of vast good to all poultry interests, and backed with a superintendant with the wide knowledge of how exhibitions such as this must be managed, we believe that this show will speak for itself. We congratulate the management on their selection of Mr. Quisenberry and believe that the appointment will meet with universal approval.

Brooder 21c

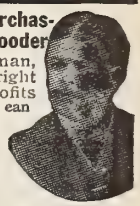
For 21c, exclusive of lamp, build the best brooder on earth, easiest to operate, needs least care, raises strongest chicks, built in 2 hours with saw and hammer. Plans 25c.

I. Putman, Route 115, Elmira, N. Y.

SUCCESSFUL Poultry Lessons FREE

20 Lessons FREE to Everyone Purchasing a Successful Incubator or Brooder

Let Gilcrest, the successful man, start you right—keep you going right—and help you cash in on the profits this season that you hope to make, ean make and deserve to make raising chickens if you start right.



J. S. Gilcrest, Pres.

Successful Incubator and Brooder

These 20 Poultry Lessons Are Really Worth $25 or More You get them FREE with the Incubators *guaranteed* to hatch larger and stronger chicks and a larger percentage than any other incubator when operated under the same conditions. One of the oldest and most successful makes of Incubators sold today. Incubators that "make good" because they *are* made right. Remember Gilcrest handles high-grade poultry, too—stock and eggs of all leading varieties—land and waterfowls.

Successful Grain Sprouter

Built of all steel sections—fireproof. Changes 1 bushel oats into 3 bushels fresh, green, egg-making feed. Makes hens lay in winter. Send for free descriptive circular and low prices.

Write for Catalog of Successful Incubators and Brooders. Enclose 10c if you also want "Proper Care and Feeding of Chicks, Ducks and Turkeys." But write for Incubator catalog sure anyhow.

$6.75 and Up

J. S. Gilcrest, Pres.
Des Moines Incubator Co.
554 Second Street, Des Moines, Iowa

The R. P. J. in Feb. issue announces that Mr. Frank Platt has severed his connection with that Journal and will go on a farm on the outskirts of his home town, Swanton, Ohio, and there breed more extensively his Red Sussex Fowls. The R. P. J. loses one of the best poultry writers in the business to-day, a man whose writings are relished by one and all. We trust that Mr. Platt may continue in some manner to give the poultry loving public some contributions from his vast knowledge of the business. We venture to say that in his breeding of this beautiful breed its popularity will be established in an unusually short period of time.

That Utah hen which laid in a five year period the grand total of eight-hundred-and-sixteen eggs, was not of mongrel breeding, and is another living demonstration of what breeding can do in egg production. This remarkable hen "Queen Utina" is a Single Comb White Leghorn owned and bred by the Utah Agricultural College, and is one of several females which has been used in experimental work at this College determining whether the yearly egg production could be increased and the useful life of the hen prolonged. "Queen Utina" has demonstrated in laying over thirty times her own weight in eggs during this period that she, at least, has paid for her keep.

Baltimore, Md. will again hold a show the coming season and we predict that after a lapse of one year that this large Eastern event will be greater than ever..Baltimore is one of the logical big ones and her exhibitions in years past have been of a high order, it is hoped however that suitable accommodations for this event can be had that the necessity of limiting the entries will not be required.

With the coming of the Spring months, the poultryman puts on a happy smile, but unfortunately we fear that with some this smile soon wears off the why and wherefore is indeed plain to see. The smile which is continuous is worn by the one whose activity throughout the year has brought the happy results in strong and vigorous birds, clean and sanitary houses, and a well prepared advertising campaign which has created a demand for his stock and eggs which is not spasmodic but has built up a steady demand. The wise breeder works twelve months in the year.

Be a careful feeder, and while the hens to do their best must have the best of feed as well as in the proper quantity, at the same time waste should be eliminated. More money is wasted each year in ignorance and carelessness in feeding than would be required to buy the feed for every hen in this Country. Do not intrust your feeding to inexperienced help but consider it the main part of your success and do it yourself, if this is not practical at least oversee this work personally, and the results on the ledger will amaze you.

An incubator is absolutely essential to any well regulated poultry plant, and whether you have only a few hens or a large flock, and desire early chicks for either show purposes or for early Winter layers, the incubator is a necessity.

We hope to see the great Panama Pacific International Exposition Poultry Show, the largest and greatest Poultry Exhibition aver staged. While this thought is on our mind, would it not be well to suggest that you can assist in making this Worlds Show a wonder. Thousands upon thousands of people will view this wonderful exhibit,surely breeders from North, South, East and West, will wish to be represented.

The State of New York always active is all things which go to the uplift of the poultry industry are seeking the Legislature of that State to make an appropriation to partly defray the expense of conveying birds to San Francisco in Nov. Truly a worthy cause and one which other States might also attempt.

The high reputation attained by the Sunswick Poultry Farm, South Plainfield, N. J., Rufus Dalafield owner, has not only been made through the high records made by the wonderful showing of this line of stock, but rather through the clean and square dealings of Mr. Dalafield.

The writer has had the pleasure of personally inspecting the grand Buff Orpingtons, as produced at Sunswick, as well as becomming personally acquainted with their owner.

The long and consistant winnings of the Sunswick Buff Orpingtons, at Madison Square, Boston, Palace Show, Chicago, Philadelphia, Allentown, Williamsport, etc. are always fresh history to the lovers of the beautiful Buff Orps.

When writing Mr. Dalafield, mention your reading his advertisement in this issue of Everybody's. One of the handsomest catalogues we have as yet received comes from Sunswick Poultry Farm, So. Plainfield, N. J. and indeed is a work of art. Every breeder of Buff Orpingtons should secure a copy.

The Pioneer of the Rhode Island Reds, Mr. Lester Tompkins, of Concord ,Mass., becomes a regular advertiser in this, the initial issue of Everybody's, and it is with pleasure that we call the attention of our readers to his ad, appearing on another column.

For years Tompkins' Reds have been consistant winners at America's leading shows, establishing a reputation which has become world wide. It is breeders, such as Mr. Tompkins, that are building for high ideal poultrydrom, not only along the lines of better poultry, but for clean and fair dealing.

When writing Mr. Tompkins, mention Everybody's.

GAME BANTAMS AT NEW YORK

By James Glasgow

The display of Game Bantams was one of the best that has been seen in several years at this the classy show of this country. A number of new names were among the list of exhibitors, plainly showing that the popularity of the game Bantams is not on the wane as some would have us think.

The Black Breasted Reds as usual predominated in quality and in numbers, taking the classes as a whole, they fairly teemed with good ones, and in many cases the decisions were very close.

Black Red Cocks. 10. First—Good all-a-round bird, gone a little in breast color, being laced some. Second—grand type of Game Bantam, but too dark in color, his main fault. Third—a nice one, a little large, fourth and fifth, nice types, shown rather rough.

Hens. 10. First a very good hen, full of class. Second—another good one close up to the winner. Third a bird of rare type and color inclined to be Duck-footed. Fourth and fifth, not so fine drawn as the other three, but two very even hens.

Cockerels. 11. First and all winners, same owner except fourth, truly a grand lot and a credit to the breeder. First and second a grand pair that stood out, fourth a beauty little cockerel, did not feel good at time of judging, or would of went higher.

Pullets. 7. First and second. stood right out in this class,, reachy and very good all through. Third a nice one, poor condition. Fifth a fair bird in every way.

Brown Reds, rather an indifferent lot.

Golden and Silver Duckwings. Few in numbers, but full of quality. First Golden pullet and first Silver Cockerel were gems of the first water.

Birchins were a classy lot. The winning cocks being only a toss up between them. Hens First, a grand type, perfect color all through, might of had a little more reach. Second was very reachy, fails somewhat in color, which a real Birchin must have. Third, a very nice hen and in good condition.

Cockerels from first to third, same owner, of good type and a grand trio, fourth and fifth not far behind, more size.

Pullets. 6 nice ones here, several lacked top color in hackel, being entirely too dark, otherwise they were grand Bantams.

Red Pyle Cocks. First a good lined bird, but a trifle course. Second fails in wing ends, and carries tail too high, very reachy. Third and fourth fair.

Hens. First a grand Pyle hen and easy winners. All others close and not much too choose between.

Cockerels, First a nice type of Bantam, strong color, pushed very close by the second. Pen number 2928 was the best Bantam, but was sadly out of condition.

Pullets. Second was put back for poor condition. First, small, lacked breast color, but was of nice type. Third and fourth not the kind we liked.

Whites only a few, but very good. Old English G. B.

This class brought together nearly forty single specimens in their respective classes. Truly a grand lot for this new variety over here this breed should become very popular, being hardy and prolific layers. Fanciers who don't take to the long leged fellows will find a suitable substitute in these little midgets, they are decendants of the Lord Derby Games.

The classes contained many imported winners and they were certainly a very pleasing lot all the way through.

Exhibition yards four, of this variety. Two of Black breasted Reds. One Silver Duckwing and One Birchin. All very well mated and a select lot.

The winning Black Red pens were worthy of special mention. One of the best that has ever been shown at the Garden. Duckwings and the Birchins also were a credit to the breeder.

PIGEONS AT MADISON SQUARE GARDEN

February 12th-17th, 1915 ***By A. Wake***

I regret to record that there were but 753 entries, exclusive of the display pens.

Many reasons were advanced for the small number of entries for the Garden Show, among the main ones might be mentioned the action of the members of the various Specialty Clubs, which had previously held its meets at earlier shows, of whom quite a few only show once and then where the Club meets. This is one of the arguments against the good which the Specialty Shows are supposed to be for—the advancement of their respective varieties. Second,—The charging of $1.00 entrance fee and the amount handed out by the management for premiums. There are several arguments, and good ones too, to sustain the management of the Garden Show for "sticking to" the $1.00 entrance fee, namely, that the cost of the rental of the Garden is enormous, I am told; and that while the attendance at the last show was a record breaker, yet there is a chance of that falling down, especially during inclement weather. I have attended the New York Shows where the attendance has been frightfully poor but this never concerned the exhibitor, so there you are. It is really a case of a 50-50 basis, although I would suggest that where there is but one entry in a class the exhibitor be notified, the class cancelled and the entrance fee returned. Third,—The lateness of the season also was a factor, but, however, not on account of pigeon breeders "getting them together" so early but that quite a few of the winners at the earlier shows changed hands and the new owners, thinking so much of their recent purchases, did not care to take a chance of exhibiting and winning with purchased birds. I do not mean by this latter reason to belittle the quality of the winners present for the best in the country of certain varieties were there, but I do mean to say that this is one of the reasons there was not as many pigeons there as formerly. Fourth,—The management to my personal knowledge returned entries which came in a day late and these entries were made in classes that were handsomely filled. The eliminatiing of the class numbers which occasioned some trouble to the exhibitors, especially in the Oriental Frill classes, but in the discussion among the Fanciers nothing developed which showed me that the entries were witheld for this reason.

The management stated last year so many entries were penned in wrong classes owing to the failure of new exhibitors knowing how to enter on account of the numbering system, hence the change was decided upon. The result was true to the prediction that fewer errors were made, in fact none that I discovered.

The penning as usual was done under Spratt's Patent Ltd. and excellent care was taken of all entries. They were promptly returned and to my knowledge not an entry going amiss and no complaints received of any birds being returned in bad condition.

The feed was the best I ever saw at any New York Show and I did not see any exhibitors going around with bags of feed as I noticed at other shows.

Mr. Cleveland was very much interested in the pigeon section of the Garden Show, which he thoroughlyly demonstrated by his presence among the pigeon fanciers and in the pigeon alley each day during the entire period of the show. He made numerous inquiries relative to the care of the birds and solicited suggestions for the welfare of the pigeon section. I am sure he had all kinds handed to him, but after all is said and done, the cardinal elements for a large entry and greater show at the Garden, consists mainly of the proper selection of intelligent, honest, competent and popular

judges. The cancelling of the one entry as above suggested, "going after" Specialty Club support and maintaining the reputation for first class penning, feeding, general attention and return of birds which the Garden Show has consistently enjoyed.

The following is a general review of the classes:—

Record Homers mustered a grand total of 110, very evenly distributed among 18 classes, not one failing to fill. The principal winners were Messrs. A. S. Vincent, Jos. Collins, Edward Nickless, Marty Lowenthal, Frederick J. Thum, W| A. Hershey, George and Arthur Schoener. Classes were provided separately for both sexes. Records of 100, 150, 200, 300, 400 and 500 miles or over. They were a splendid lot of Homers, having a knowing, business-like appearance.

Jacobins must have been somewhat of a disappointment to those who showed for there were but a total of 122. The competition was mainly confined to the four classes provided for Blacks and also for Any Other Color classes. Among the exceptional birds shown, of the very splendid lot on view, was the winner in Black adults belonging to Mr. Foshay, which was a stylish one, stands at attention, splendid color, and of course, the requisite smooth, thick feather. The two Black adult hens of Mr. Gorse which looked like twin sisters, both being of the usual wealthy feathered kind shown by the exhibitor. The winning Young Cock belonging to Mr. Wands, a recruit from the hot-bed of Jacobin breeders, New Rochelle, N. Y., wins several Specials for novice classes, a first class youngster all around.

In Young Red Cocks was found the champion of 1914, Jack, belonging to Mr. Gorse. This bird was penned at the end of the aisle at a corner pen and certainly was in a position to show his good qualities, a wonderful young cock.

In Adult Yellow Cocks was found the best adult cocks, also belonging to Mr. Gorse. Second of this class going to Mr. Faulhaber with another very fine Yellow, close up. There were only six in this class and they were all good ones, as might be said of Yellow Adult Hens, the first and second also belonging to Mr. Gorse and Mr. Faulhaber.

In the Any Other Color Classes were some very hot ones, hardly a poor one in the entire lot of 32, the chief winners being Messrs. Foshay, Gorse and Carson. In these classes was found the Special winning 1914 hen, The Kite belonging to Mr. Foshay and I believe the same owner's Adult Hen was awarded the Special for best Adult Hen.

The Carneaux made a total of 78. Competition in the three Red classes was especially keen, averaging over 15 per class. The chief winners being Messrs. Stevens, Miles and Petersen. A wonderful improvement has been made in the color of this very useful variety, although the most typical ones need some improvement in color. They are really becoming a feature of the shows. The Carneaux breeders are an enthusiastic crowd and stick close to their variety. The Special for best Red going to Mr. Steifel with his adult hen.

In Yellows were also shown some very grand birds, the chief winners being Messrs. Miles, Petersen, Hopkins and Stevens.

The Special for best 1914 Carneaux fell to Mr. Stevens's grand young Yellow—hard to find fault with excepting probably the color of the cere, which was a bit pale, a very popular win.

Several splendid Whites belonging to Mr. Petersen were also shown, the winning cock was a most typical one, only lacking a bit in width across the shoulders.

The entries in Carriers were quite a disappointment, this being the week of the Carrier Club meet, the only classes filling being in the Black or Dun. Mr. Carson winning the premier classes in adults and Mr. Opsann winning in young birds.

Fantails were fairly represented in the Whites, the young cock and hen classes, averaging 8 to the class. Dr. F. D. Solley winning both firsts in the young birds and adult hens and Mr. W. H. Shipman winning first in adult cocks. It is needless to say the quality was of the very best.

In Tumblers only three classes were filled. the Bald Heads leading. Messrs. Whitney and Grammick having a hot time of it in the Red and Yellow classes.

African Owls were confined to just a handful of exhibitors, Mr. J. C. Donovan showing a very nice string of Blacks, Blues and Whites, landing all the firsts but one. Master Edward M. Carson, who looks every inch of being a chip of the old block, a noted Jacobin and Carrier Fancier, of New Rochelle, capturing first with a beautiful little Black Hen.

In Helmets, Mr. A. A. Robst as usual almost swept the deck.

The exhibit of Barbs shown by E. B. Ulrich, the noted Turbit breeder, was very much admired, there being no competition, however.

Last but not least was the splendid exhibit of the Oriental Frill Club. As usual with the meet the awards were very much discussed and the old question of open or arrow point lacing and structure was revived and from what I could learn has not been settled yet.

The largest classes being in Satinettes, the chief winners were Messrs. Beer, Clusman, Brennaman and Twombly.

The Blondinette classes did not fill very well but the quality in Dun and Black Laces was magnificent. Dr. Meyer, Messrs. Twombley, Ashley, Brennaman and Bower each having a hand in the pie.

The Bluettes and Silverettes furnished considerable food for thought for the judges (of whom there were two for this meet) especially in the young class, which contained 12 entries, the chief winners being Messrs. Brennaman and Twombley.

In Turbiteens Messrs. Reinsmith Bros. captured all the firsts where there was competition, with a nice, small string of Blacks, Reds, Yellow and Any Other Colors.

FANTAIL PIGEONS AT NEW YORK.

By James Glasgow

Owing to the Fantail Club having met at Boston a few weeks previous, the entry was far below the usual number seen at this show. But what they lacked in numbers, was amply made up in the quality that was shown. White cocks, four. First the Palace winner, not at his best here, but wins. Second. Would not show at his best, still pushed the champion hard for first. Third a grand Fantail. Fourth another good one, but not in the best of condition.

White Hens four. First an old winner put down in good shape. Second beautiful tail and body, not as steady as winner. Third a nice fan, but not the class of the others. Fourth, would not show her best, good tail, but poor legs.

White Cocks 1914. The Boston Club meet Champion wins very easily, great tail and body. Second a very good fan, but was in too strong company to win. Others a beauty lot with not much to choose between them.

White Hens 1914. Eight. First round bodied, big tail always showing, wins. Second a very nice bodied piegon that did not show at her best. Third Very small and neat, but could not get her to show, otherwise would have made the winner go some.

Black, Blues, Reds, Yellows and Saddles were only one in a class but full of rare quality.

CLEVER PIGEONS.

A close observer writes that he has noticed a smart trick again and again on the part of pigeons in Palace yard, London. A dozen or more of them will gather under the nosebag of a horse. Suddenly, and evidently by prearrangement, all the birds fly up. The horse, being startled, tosses his head, out comes some of the grain, and the pigeons settle down to eat. It is probable that pigeons elsewhere have learned the same trick.

"What made your wife give up her idea of being a new woman?" "The new baby".

Water Fowl Department

Annual Meeting Water Fowl Club.

The Annual Meeting of the Water Fowl Club of America was held at Mechanics Building, Boston Mass. on Friday, Jan. 15 1915, President Louis B. Schram presided at the meeting.

The meeting was well attended by many members from Maryland, Pennsylvania, New York, New Jersey, Rhode Island, New Hampshire, Vermont, Connecticut and Massachusetts. Nearly all the officers of the club were re-elected. Following are the newly elected officers: President, Louis B. Schram, 60 Hamilton ave., Brookyln, N. Y. General Vice President, Francis G. Riggs, Robinson, Md; Secretary and Treasurer, Mrs. W. P. Maston, Pleasant Valley, N. Y. Executive Committee, Louis B. Schram, Francis G. Riggs, Mrs. W. P. Maston, W. B. Atherton, Randolph, Mass; John C. Kriner, Stettlersville, Pa, Miss Sara A. Little, Clyde, N. Y.

The water Fowl Club of America has made rapid progress the past two or three years. Not only has the membership increased, but the names of many of the leading poultrymen and women in the United States and Canada may be found on the membership roll.

We have the quality but we want a greater membership. The larger the enrollment, the greater the finances; the more the club can accomplish for its members and for the water fowl industry. The larger and better known a club is, the more concessions and assistance it will receive from the poultry shows, the American Poultry Association and from the Poultry Press. We ask that every person interested in water fowl will join the club and every member should strive to enlarge the number of members during the coming season.

The Water Fowl Club of America was organized 1894, it being the largest club, devoting its interests to the water fowl industry in America. A membership in this organization is of great value to the water fowl breeders.

The next meeting of the Club will be held at Boston, Mass. during the week of the Boston Poultry Show, Jan 16. We expect seven hundred entries of water fowl on this occasion.

Become a member of the club and compete for the valuable cups, cash specials, etc., which will be offered at Boston next season. For further particulars, address Mrs. W. P. Maston, Pleasant Valley, N. Y.

Indian Runner Ducks.

By Mrs. George W. Church

Many people think it a very difficult thing to raise a flock of Runners, yet, if one manages them rightly, and supplies the proper food, there is nothing easier.

It is a mistaken idea that a duck, because it is a water-fowl, requires plenty of water, even when young, as there is nothing more detrimental to the "downy little duckling" than dampness or swimming water. They should never be allowed to swim until feathered and at no age should they be compelled to occupy damp sleeping quarters.

When hatched in incubators, they should be as carefully guarded against chill as are incubator chicks. When hen hatched, one need not be so careful.

A good many people have the idea that ducklings are so hardy that they will thrive under any kind of treatment but the truth is, they need just as intelligent care in feeding and brooding as do chicks.

After the first few days, the duckling does not require as much artificial heat as does the chick at the same age. The duckling grows several times faster and therefore generates much more bodily heat.

I prefer to brood ducklings with hens, regardless of how they are hatched. Each hen and her family are provided with a roomy coop, build like a colony house and with yard attached. When ten days old they are let out of the yard for an hour or two at first, the time being lengthened as they grow older.

Although they pay very little attention to the clucking of the hen, she manages somehow to bring them all safely back to the coop. As they always travel in a bunch, it is seldom that any get behind. When raised by hens they learn to forage sooner and go farther than they will when raised in a brooder.

While they may be successfully reared in any good chick brooder, the ideal artificial way is with one of the new colony brooder stoves, as they grow so rapidly and attain full weight when twelve or thirteen weeks old, it will be apparent to all that plenty of bone and muscle making food is a necessity during this period.

We do not feed until at least thirty-six hours old. Stale bread, moistened with sweet milk, squeezed dry, and sprinkled with fine sand, is then given every two hours for two or three days. A grain mixture,

Reports from our customers for last year showed that they raised 90 to 95 per cent. of their hatches when they used—

Allen's Nutro Chick Mash
Allen's Nursery Chick Food
Allen's Growng Chick Food

Tests on poultry experiment farms shows that—

Allen's Mash for Layers
Allen's Quality Scratch Food

produced an 82 per cent yield while other guaranteed foods only produced a 40 per cent yield. Write for prices and literature.

ALLEN MILLING COMPANY,
Poultry Food Specialists,
Niagara Falls, N. Y.

composed of three measures of bran, two of corn meal, one of low grade flour and middlings and about three per cent. of sand, beef scrap oil meal and bone meal is thoroughly mixed together dry and a little added to the bread after the first few days. The amount is gradually increased and the bread finally left out.

Whenever possible, it is best to moisten the mash with sweet milk, It should always be cumbly, never sloppy. After ten days, some sort of green stuff should be added. Clover alfalfa, lettuce or almost any vegtable finely cut will answer. Give only a little at first increasing the amount gradually until it constitutes one-third the mash feed.

When the ducklings grow older, the amount of beef scrap should be increased gradually to about 8 per cent by the time they are two months old. Sand, bone meal, finely ground, oyster shells and charcoal should be kept in shallow boxes where they can help themselves anytime. Ducklings should never be fed more than they will clean up at once. When yarded all the time, care must be taken not to feed too heavily as this will cause trouble. When on free range there is practically no danger of over feeding

Plenty of drinking water is quite as necessary as food. Until the ducklings are feathered they should have water in some sort of fountain as they will not get too wet. In warm weather, water should be within reach at all times. When eating they take a bite of feed and then a drink of water to wash it down. Never omit the water at feeding times, as without it they have been known to choke to death.

Many are puzzled to know which variety to choose. If white eggs be the object, the Cumberland strain of the pure English Penciled variety will produce them every time. Some like the White Runner but not all strains lay white eggs. I gave them a trial but did not find them nearly as profitable as the Penciled, so discarded them. The American Fawn and Whites mostly lay too many tinted eggs to be satisfactory.

Before the Penciled Runners were given a place in the Standard, I thought seriously of giving the American variety a trial. Several different seasons I wrote breeders, advertising white egg strains, if they would guarantee all ducks hatched from their eggs to lay "white eggs only". Not one would do it and several ignored the question entirely.

Having no use for green egg layers, the American bird has never had a place in my yards, and never will as the White-egg Cumberlands are satisfactory in every respect.

If at all particular as to the color of the eggs and the proficiency of the birds, never buy from a breeder who will not guarantee "white eggs only", this any breeder of the Cumberland type of English Penciled Runners will gladly do.

WATER FOWLS AT BOSTON SHOW.

By Mrs. W. P. Maston.

At the Annual meeting of the Waer Fowl Club, at Boston, in January, it was expected that there would be at least five hundred entries, but many of the exhibitors, in fact several of the largest breeders of water fowls, hesitate to make entries, owing to the outbreak of the hoof and mouth disease among stock in many states, necessitating a strict quarantine, which, made much trouble for the exhibitors in shipping.

However, there was a first class exhibit, and quality of the best. This was my first visit to the Boston Show, and I must say that I never attended a poultry show, where there was so little fault finding with the awards. Also in the management of this great show there was not the least, discord. All went along smoothly and as regularly as the pendulum of a clock.

With the vast volume of work necessary to make so large a show a success, many of the exhibitors who had never attended the Boston Show before, marveled at the seemingly easy manner or system under which the big show was conducted. In fact, I heard one of the leading judges make the remark that he would give considerable to know by what system the secretary was able to get through so vast an amount of work, in so short a time, with so few assistants.

The show was hugh success from every standpoint; quality, number of birds on exhibition, attendance, enthusiasm, etc.

The single entries in the water fowl class numbered one hundred and seventy-eight birds, while those in the pens numbered sixty-five, making a total of two hundred and forty-three head of water-fowl in competition.

In addition to that, there was a most beautiful display in a tank of water on the main floor, which attracted a great deal of attention at all times.

There was a big class of Pekin ducks, forty-four single entries and six pens. H. B. Ellis won the 1st prize old duck, while Aldham Poultry Farm, F. A. Tiffony, Prop., won the 1st old drake, 1st young drake, 1st young duck and 1st young pen. These birds had the typical Pekin shape and were in the pink of condition. Mr. Tiffany won more points on the one variety (Pekins) than any other exhibitor on all varieties, with the exception of Mrs. Masten, who won more points on water fowl than any other exhibitor, she having fifty-eight birds entered in the show.

Fernbrook Farm, Arthur Bouck, Manager, also had a fine display of Pekins.

The Aylesbury Classes were not filled but the 1st prize drake and 1st

Courtland H. Smith, (Pres. American Cornish Club,) Proprietor

prize duck were as good a pair of birds as we have seen in sometime. They had great depth of keel and clear white plumage which is so essential in an Aylesbury.

There were not quite as many Rouen ducks shown as usual, but still a big entry, as there were thirty-one single entries and two pens. Linstead Farms and L. B. Schram, two well known exhibitors of Rouens, exhibited several most magnificant specimens. Linstead Farm won 1st old drake, Aldham Poultry Farm won 1st young drake. L. B. Schram made thirteen entries and won nine prizes on Rouens.

There were few entries of Cayugas Gray Calls, White Calls, White Muscovies and Blue Swedish, but those that were entered were of good quality. The colored Muscovies were a good class. The 1st prize old drake, 1st prize old duck, and 1st prize young duck were awarded to Mrs. Masten, D. O. Tuttle won first prize young drake.

Usually there is a big entry of Fawn and White Runner ducks, but there were only fifteen entries at Boston. Farmbrook won 1st prize old drake, and 1st prize young duck. John Slade winning 1st drake young and H. B. Ellis, 1st duck old. The latter had both type and color and rarely do we see a bird of this variety as good as this sepcimen especially as to style and carriage.

There were not many Penciled Runners shown. W. D. Woodruff, of St. Catharnes, Canada, won 1st in every class.

White Runner ducks seemed to be in the lead in the number of entries. F. K. Crockford had some grand specimens, he making a clean sweep, winning 1st, 2nd, 3rd in each class, regardless of strong competition.

Willdum Duckery, Wm. Dummer, Prop., and Mrs. Maston were the only competitors in the Wild or Mallard classes, the former winning 1st young drake, while the latter won 1st old drake, 1st old duck and 1st young duck.

The Buff duck class was pretty well filled. Willdum Duckery won 1st in every class with the exception of young drake. Watson and Marshfield winning 1st prize on the latter. There was a grand display of Geese at Boston, there being just one hundred specimens entered.

Toulouse lead them all in number of entries, there being twenty-two birds in competition. W. A. Cobb had some fine specimens, winning 1st in three classes. D. O. Tuttle won 1st Gander old, Mrs. Watson won 2nd young Goose and Pastime Farm won 2nd old Goose.

Eugene Sites, of Elyria, Ohio, won first on Embdens in each of the four classes, except young gander. The latter was won by Pastime Farm. There were twenty-one entries of Embdens.

There was also a big entry in Brown Chinese Geese, viz, seventeen birds, Mrs. Maston won 1st in every class, with the exception of Gander, young, which was won by Pastime Farm.

In White Chinese Geese, Mrs. Maston made some fine winnings, having captured 1st, 4th and 6th old Goose, 1st and 3rd young gander, 2nd old gander and 1st, 2nd 3rd, Black won 1st old gander.

In African Geese, W. H. Huse, of Manchester, N. H. won 1st in every class, while Brookview Farm, of Newburyport, Mass. won 1st in every class on Wild or Canadian geese.

Mr. Little of this Farm also exhibited some fine Gray Calls and Cayuga ducks. Pastime Farm won everything in the class under A. O. V.

With the Water Fowl Club Show at Boston next year, a big entry is looked for.—By Mrs. W. P. Maston.

$2000 YEARLY ON TWO TOWN LOTS.

The success of those who are really successful is of special interest to all, how to succeed with Poultry and how to make real money, by these who have made it is always worthy of consideration. No business offers better opportunities or a surer way to success than does Poultry.

We have become, lately, greatly interested in a circular sent out by Mr. Charles A. Cyphers, Buffalo, N. Y., President of the Buffalo Incubator Co., in which he, in a most interesting way gives the history and account of the success of Mr. J. S. Carter, Kennedy, N. Y. with illustrations of his plant, feeding, etc.

We know of no greater expert, or more compitant authority on poultry questions than is Mr. Chas. A. Cyphers. His experience as a breeder, patentee and manufacturer of Incubators and Brooders is world-wide, and we have always been pleased to recommend him and his goods.

In this circular, Mr. Cyphers graphically account of Mr. Carter's mode and the features that have insured his success. It gives the account of the stock laying qualities and their handling and feeding and we would like all of our readers to have a copy of this circular; which can be had by addressing Mr. Chas. A Cyphers, No. 40 Bradley St., Buffalo, N. Y.

THE MARTLING HENNERY.

Silver and Golden Campines.

The improved Silver and Golden Campines, as bred by the Martling Hennery, Ridgefield, N. J. have, in fact, the improved qualities to commend them. Mr. Martling has devoted his best efforts for years to his stock, has aclimated them, bred them to size and laying qualities and has also improved their feather and color quality.

If there is any chance for question regarding this, we would recommend you to the record he has made this past season at several of our greatest exhibits. From early fall shows

R. C. White Orpington Hen, a FANCIER GAL 5—P J T tthehcJU winner in the yards of Mengel's Poultry Yard, R. oN. 1, New Ringgold, Pa.

to the great Madison Square Garden, New York Show, they made a record of winnings that stands unapproached by any line of any variety. Trenton, Allentown, New York State Fair, Williamsport, Buffalo, New York Palace and all shows of special note have given up their choiciest Blue Prize Ribbons to Martling Campines.

They are well supplied with stock to fill any orders with perfect satisfaction to all. Their 1915 matings are superior in every way and they assure to all a most satisfactory Hatch. If you have Campine wants, address the Martling Hennery, Box E., Ridge field, N. J. Always mention Everybody's.

H. P. S.

WINNING REDS.

J. H. Crossley & Son, Magnolia, N. J., R. 1, who are regular advertisers in this magazine, inform us that the past season proved very successful from an exhibition standpoint.

Their win at the Priladelphia Show, in December, last, where they won the coveted Display Prize, in one of the best Red classes of the year, also winning 2d cockerel,2d pullet, 2nd cock and 3rd and 4th pen, proves the quality of this line.

Both father and son of this firm are true judges of the Reds and their reputation has been made on square dealing.

KIEHL'S RED BOOK.

Mr. Charles A. Kiehl, owner of the famous male "Bonfire" becomes an advertiser in Everybodys' with the initial issue. From the fact of the writer's personal knowledge of the line bred by Mr. Kiehl, we do not hesitate to recommend this carefully bred strain. The Mating List for 1915 of the "Bonfire" Reds is interesting reading for all lovers of Reds. Write him to-day. Box E. Williamsport, Pa.

Our Bird Neighbors.

Glad to Welcome Them

It is time to welcome back to this climate the robin, the bluebird, the oriole and the hundreds of other songsters of the air. And we are all mighty glad to see them. The wondrous melody of their songs is a rebuke to every form of melancholy. It was Dickens who reproved those who pain the face of the world with an eternal frown. "Its pictures," he declared, as he described the happy frolics in the sunlight of poor, witless Barnaby Rudge, "are not in black and sombre hues, but bright and glowing tints; its music—save when ye drown it— is not in sighs and groans, but songs and cheerful sounds. Listen to the million voices in the summer air, and find one dismal as your own. Remember if you can, the sense of hope and pleasure which every glad return of day awakened in the breast of all nature; and learn some wisdom even from the witless, when their hearts are lifted up, they know not why, by all the mirth and happiness it brings."

It is not making any apologies for the rigor of the winter to say that one of the compensations for having endured its length and strength is the arrival of these millions of voices in the air, and the enthusiasm which they create. Thoreau used to declare there was nothing more glorious in the world than the exhilaration of the air and the songs of the birds on a bright crisp, spring morning. He was inclined to think that there was no greater blessing than an appreciation of nature, and he was quite as well convinced that they were cursed whose ears were dull to all these sounds and songs of the outdoor world. It is easy to understand that he had the same idea of outdoor life as did Mr. Dickens.

Birds Fond of Company.

According to the "Preliminary Census of Birds" sent out by the United State Department of Agriculture, a copy of which has been received by W. L. G. Edison, of the bird station at Highland Park, the average bird population is one pair to an acre on the farm lands of the northeastern states, while under protection and with food and water supplied, from three to seven pairs are recorded.

Exact censuses show an increase of 50 per cent. in the last four years on one 50 acre tract at Viresco, Va., where the birds have been protected for a period of seven years. At Chevy Chase, Maryland, on five blocks in the most populous part of the village, where each house has a yard of from one-half to one and one-half acres with large trees of oak and other hard woods, several cherry trees and plantings of berried shrubs and where food, water and nesting facilities are provided, the census shows 38 different species on 23 acres, 148 pairs of native birds and 13 pairs of English Sparrows, or seven pairs to the acre. It is stated that the blocks most thickly inhabited by people are also most fully occupied with breeding birds, a fact that seems to refute the widespread belief that human beings and birds are naturally antagonistic.

A census of 75 acres of Highland Park, taken last year, showed 128 pairs of 20 species of native birds and one nest of the introduced pheasant. There were 30 pairs of song sparrows, 22 pairs of robins, 14 pairs of catbirds and 11 pairs of goldfinches. The following birds were observed by Mr. Edison and R. E. Horsey at Highland Park during the week ending February 27: One brown creeper, 30 cedar waxwings, 25 crows, one hairy woodpecker, 24 herring gulls, 1 migrant shrike, one northern shrike, 20 pheasant, two prairie horned larks, five robins, one screech owl, 12 slate-colored junco, one song sparrow, one sparrow hawk, 18 tree sparrows and four white-breasted nuthatches.

STILL PLENTY OF TIME FOR HATCHING

Although the early hatches are out of the way and the little chicks chirping in the brooders or hen coops, there is still ample time for those who need a greater number of chicks than were produced by the early hatches.

Many poultrymen prefer to hatch later in the season especially so with the lighter breeds. And any time before the hot weather comes on is a good time for the later hatching and the chicks should do well with proper care.

One great advantage of later hatching is the fact that the heavier spring rains and therefore wet ground have gone by.

In this connection it is worth while noting that B. H. Greider, the extensive poultryman of Rheems, Pa., is prepared to ship at short notice eggs for hatching from any of his choice strains of thoroughbred poultry.

The better way to learn all about his large farm and the many breeds as well as the equipment which he offers is by securing a copy of his large, handsomely illustrated catalog. While quite an expensive book to issue, this will be sent to any of our readers for 10 cents by sending to B. H. G. Box No. 126 Rheems, Pa., and we would suggest that any one interested send for this book now. The trifling cost may suggest something of importance while there is still time to make use of it this season.

Laury's Station, Pa.
Feb. 23, 1915.

H. I. Co.,
Salem, Va.
Gentlemen:—

A word as to the success I have had since using "OCULUM".

I have not had a single case of Roup or Cholera this winter, neither was I bothered with that dreaded disease, White Diarrhoea, last spring and summer, and I am sure if anybody will follow your instructions as to using "OCULUM", he will have NO trouble in raising healthy, vigorous fowls, and it is with pleasure that I recommend "OCULUM" to all poultry breeders.

Yours very truly,
R. H. Lentz.

PREPARE NOW FOR LATE FALL AND WINTER EGGS.

By J. M. Smith, Oklahoma.

Eggs are certain to bring high prices next fall and winter, and if the farmer wishes to share a part of the benefits, he should begin to get ready for them early in the spring. The way to have eggs late in the fall and early winter is to hatch pullets early. It is the early hatches, from which the early pullets are derived, that are the largest money-makers for the producer of poultry.

The cockerels can be marketed in any market when they attain a weight of a pound to a pound and a half, which they should reach in eight to ten weeks of age, at a greater profit to the producer than at any other time of their lives. The early hatched pullets, if properly grown, should begin to lay in the fall, at the time when eggs are scarce and high in price.

Pullets must be well matured before they will lay many eggs. Pullets that start to lay in the fall, before cold weather sets in, will, as a rule, lay all winter. It is the early hatched pullets that produce eggs in the fall and early winter, when prices are high. February, March, April and May are the months to do your hatching in order to secure early fall layers. Yearlings and two year old hens do not lay many eggs in the fall as they are molting at that time and the feed they consume goes, not only to keep up energy and life, but also to put on or grow a new coat of feathers. In properly matured pullets, all surplus energy, beyond that needed to meet the requirements of the body, is available for the production of eggs.

Proper feeding and dry, comfortable quarters are two important features in the production of eggs. An all grain ration is too fattening and should never be fed exclusively. If you have any spare ground at all, it will pay you well to put in a patch of rye, oats or some other small grain to furnish some green picking. Otherwise, you will need to provide the green feed in the form of cut forage. If these are not available, sprouted oats, as prepared during the winter, or cut alfalfa hay must be resorted to. Since the birds must be encouraged to exercise, give their grain feed in a litter of straw. A good grain ration is made up of wheat 10 lbs., cracked corn 10 lbs. and oats 5 lbs. In addition to this it is well to keep a dry mash before them in a hopper made up of the following: Shorts 6 pounds bran 3 pounds, corn meal 6 pounds, oil meal 1 pound, alfalfa meal 1 pound, beef scraps 5 pounds. These quantities of course may be varied, but the proportion should be maintained. If table scraps are fed reduce the grain feed accordingly. Kafir, Milo, or feterita may be fed in place of the corn, pound for pound. Do not feed spoiled beef scraps or molded feed of any kind. Plenty of grit, oyster shell and clean drinking water should not be overlooked.

F. W. DAWSON & SON.

F. W. Dawson & Son, Williamsport, Pa., have extended their specialty feed and supply business to all sections of the East. The reputation they have made has been based on their being able to supply feeds that please and have given general satisfaction. Having all the facilities for the handling of orders, promptness in delivery is always made. Read their ad in this issue on chick feeds.

THE PUTNAM BROODER.

Something new of great interest to all poultry raisers is the Brooder Heater recently put on the market by I. Putnam, Route 115, Elmira, N. Y. This unique invention is the handiest and most easily operated brooder we have ever seen. The daily need of filling the ordinary brooder lamps is one of the most disagreeable and yet imperative tasks connected with artificial brooding. To those who have done this work over and over again for years the Putnam Brooder Heater will appeal with the greatest force, for this Brooder Heater requires filling but once in 12 days and never needs trimming. The burner used is the same as the one used in the celebrated Little Putnam Stove, which doubles the heat value of the oil. This new Heater is used in the Putnam Home Made Brooder, comprehensive and well illustrated plans of which are offered in this month's issue of Everybody's, at the very low price of 25c. It will pay you to look this ad up and write to Mr. Putnam.

Notes and Comments.

BY

H. P. SCHWAB,

Mr. Robert J. Walden, Middlebugh, Md., has brought his "Maryland Strain" of Barred Rocks up to a quality where they are contenders for highest honors at our greatest shows. At the last M. S. Garden New York Show ,he won Third Pullet. She was past her best and had been laying. This was to be regretted. When in condition, such birds are well qualified to win in any company. Mr. Walden has this season won at Philadelphia, Hanover, Williamsport, Pittsburgh, Pa., the National Club Show, etc. At the Club Meeting show, he won cock 2, cockerel 2, hens 1-2-4, pullets 1-4-5-8, pullet-bred male 2-4, cockerel-bred pullet 1, exhibition pen 1, cockerel-bred pen 2, pullet-bred pen 1. Club cup for best cock, hen, cockerel and pullet. Shape and color female specials etc. Mr. Walden's mating list fully described his matings.

Single Comb Black Minorca Breeders and Fanciers have every reason to feel satisfied with the progress made and seen in this variety this past season. There have been larger and better classes at most shows than in years past. Shape surely was seen to better advantage. The Minorca type is not the easiest to produce, well set on straight strong legs, nor is the Minorca head, conforming to Standard, so very easily produced. It has taken years to make them what they are to-day, and as they are now, they are a far more practical breed of real worth that we can commend.

The Minorca Egg has special charms both in size and color. When we consider that they are running strong, along with the best laying varieties, and are producing white eggs of exceptional size, we can then better understand their increased popularity. When in doubt try the Black Minorca, either Single or Rose Combs.

Mr. Frank McGrann, Lancaster, Pa., owner of the Whatglen Farm, a S. C. Black Minorca specialist, breeder and judge, has just issued one of the finest Poultry Catalogues as have ever seen, beside showing several of his winning birds, it is beautifully illustrated with photos of his farm and buildings. The Catalogue is a rare piece of work and will surely help to boom the variety and acquaint the public with Mr. Mc Grann's line.

Money Making Poultry is the title of the large handsome catalogue sent out by the Pittsfield Poultry Farms Co., Skowhegan, Maine. This catalogue is in line with the regular poultry books, is full of practical articles and sound advice, well worth reading.

The Pittsfield Farms are among the largest in the world and we hope later to visit these and to tell our readers of them, their varieties are Barred and White Rocks, S. C. Reds and S. C. White Leghorns, making a specialty of Baby Chicks, four and eight week old chicks and eggs for hatching. Their incubator capacity is 185, 000 eggs every three weeks. They have over 35,000 layers on their Farms.

Report "Regal" progress, is what John S. Martin, Port Dover, Ont, writes us in sending his new 1915 mating list and catalogue of sixty pages. The "Regal White Wyandottes" have near twenty years of successful exhibiting and breeding back of them and it is necessary to get out a big book to tell part of this. It is a fine book, beautifully illustrated and full of facts worth knowing. Mr. Martin must be considered among the foremost breeders of this age. Time and again we have complimented him on his winnings and on our several visits to his home. He has the goods and is the right kind from shoes to top of his hat.

"It's in the air" Coal burning Colony Brooders have met with unsual success this season. They simply by the brooding question are durable and economical as well as reliable The Paramount Colony Brooder, made by the North Eastern Manufacturing Company, Albany, N. Y., have issued a neat booklet that is free for the asking.

Among our first callers at our Rochester Office, was Mr. Frank Conway, Manager for Hugh A. Rose, Welland, Ont. Mr. Conway has made the breeding of Orpingtons and Bantams a specialty and his success will be found recorded in the Catalogues of the leading shows. For the past several years, Mr. Conway has also been judging at several of our leading shows. He had made good all along the line, a fact we are pleased to report.

For 1915 Mr. D. W. Young has issued an exceptionally fine catalogue, it taking thirty-two pages for him to tell the people what he wishes them to know and in describing his matings. This year he has double records to give, his winners at Boston, Mass., Jan. 1915, along with those at M. S. Garden New York. No two such records have ever been made before. Of a possible eleven 1st prizes, he won eight, six 2nds, seven 3rd, five 4th and four 5th prizes. This includes every first and second prize offered on both Cocks and Cockerels at both New York and Boston. It is quite proper that the cover of this 1915 list should be Blue, it is mailed free for the asking.

Everybody knows the Schenley Heights Rhode Island Reds and their owner, Mr. Charles F. Rankin, Pittsburgh, Pa. The story of this line, their winnings, etc. is told in their new 1915 catalogue, a copy of which just came to hand.

Barred Rock Breeders should be particularly interested in the line bred by Mr. L. B. Ressequie, Millers, N. Y., that have won the leading prizes at Pittsburgh, Buffalo and Rochester this year, winning 18 firsts, 7 seconds, 10 thirds, 2 fourths and 2 fifth prizes. Their list describes their matings and is one that will interest all Barred Rock Breeders.

Note the illustration of the Rancocas fine winning White Rock males at the club show, held at Pittsburgh, Pa., Jan. 1915. The class was one of the largest ever seen, full of superior quality and shown at their best. These males show their worth. This line has been bred for quality and has been a consistant winner for many years. They also breed S. C. White Leghorns and at the late M. S. Garden New York Show won two first prizes. At this time they have special inducements to offer in males and mated birds.

The Buff Orpingtons of Sunswick's, South Plainfield, N. J., have made several of their best winning records this season. Mr. Delafield has given his personal attention to his line for many years and has brought them up to the finest quality of breeding and exhibition worth. Mr. Hobbs, his manager, is one of our oldest Orpington breeders, being with Mr. Wm. Cook in England when the Orpingtons were first bred. We can heartily commend these men and line.

Mr. E. B. Thompson, Amenia, N. Y., originator and breeder of the famous "Ringlet" Barred Plymouth Rocks presents his ad on the back page of this magazine. Everybody knows this line, or should know it and its long record of New York winnings. At both the 1914 and 1915 M. S. Garden New York Shows, Mr. Thompson won all prizes offered on cockerels and first at each on cocks and pens, beside several other ribbons. This year he won all five first prizes, a record never before made in Barred Rocks at this show. Mr. Thompson's catalogue is free for the asking. Mention Everybody's.

We have special pride in the quality of articles presented in this issue. Read them over, study them, they are of a beneficial class that will do both old and new breeders good. Everybody read Everybody's.

Every credit is due to Mr. M. F. Delano, Prop. of the Owen Farms, Vineyard Haven, Mass. for the showing and records made this year. From early fall to the late M. S. Garden New York Show, he has been at it and a most consistant winner at all. From the Great Allentown Fair and New York State Fair to the Palace New York Show, Chicago, Boston and the Madison Square Garden his birds have won in all classes and against all competition. His 1915 mating list is very complete, fully describing all his pens in a way that will illustrated their quality and what can be expected from them.

One of the old and reliable strains of White Wyandottes is the "Mountain Strain," bred by Mr. F. B. Williams, Maugatuck, Conn. who has been breeding and exhibiting them for many years. At this time Mr. Williams is offering some special breeding stock, single birds, trios or mated pens.

Mr. A. C. Hawkins, Lancaster, Mass., one of the real old time breeders of Barred Rocks, who has been exhibiting continously for over thirty years, made a splendid winning at the late Boston Show. It is the best record made by a Barred Rock breeder up to date. He won cock 1-4, hens 1-2, cockerel 1, pullet-bred cock 1-3, cockerel-bred hen 1, pen 1. At the M. S. Garden New York he exhibited only a display pen of quality, showing some of his line. ton winners and others of his line. Mr. Hawkins is now devoting all his attention and his entire plant to Barred Rocks, which have proven themselves up-to-date and of special value as breeders.

We have received copy of Mr. Henry D. Riley's, (Stafford, Pa.) circular and mating list for 1915. Riley's Barred Plymouth Rocks have been favorably known for many years for their quality and exhibition values. For years he has won at our best shows and his records at Madison Square Garden New York, Cleveland, Indianapolis, Boston, Williamsport, etc. are pretty well known and places them in the first ranks of quality lines. Birds hatched from his eggs sold to customers have also proven great winners, a record of which he can well feel proud. We know such have won at Chicago and Boston, Guelph, etc. highest honors.

Mr. Riley's matings this year are very superior in quality. We saw them sometime ago and believe they are the best he has had. Write him for circular. Always mention Everybody's.

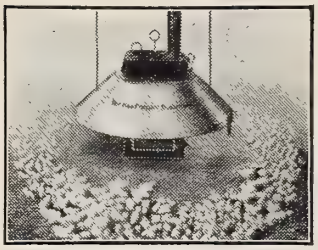
THE HILL SELF-FEEDING, SELF-REGULATING, COAL-BURNING COLONY BROODER



Will Raise Your Chicks Better Than a Hen.

It is the only brooder equipped with safety magazine which absolutely prevents any gas from escaping in the house, and at the same time automatically feeds the fire, making it possible to maintain an even temperature of pure, warm air under all conditions which is positively necessary to successful brooding. It is fitted with Ransom Duplex Grate, the greatest grate known. The brooder is perfect in operation, simple in construction, will last a lifetime and fully guaranteed.

Send for circular and price list of the brooder that solves the brooding problem.

American Poultry ASSOCIATION.

E. B. Thompson. President,
S. T. Campbell, Secretary,
Mansfield, Ohio.

Every Member get a Member.

President E. B. Thompson of the American Poultry Association has sent out a special request to the members urging each to "get a member" A. P. A. members should hear this and make an effort to comply. The association now has something over 6000 members and if every member should get a member it would then with a membership of close to 13,000 be an organization of far greater worth and influence.

There is no reason why we should not have 25,000 yes 50,000 members. Membership is only a question of the interest the private in the ranks takes in the association so lets all get together and comply with the Presidents request. Let every member do his or her duty and everyone work to get a new member. Now.

Secretary Campbell, Mansfield, Ohio, will supply Membership Blanks and give any needed information. Write him to-day, make your start and do your share, you will feel better then, with a duty well done.

Every Member get a Member

ANNUAL ELECTION 1915
NOMINATIONS

Statement showing the candidates who received the required ten per cent of the total number of votes cast for each office.

President

E. E. Richards, Cedar Rapids, Ia, 575, E. B. Thompson, Amenia, N. Y., 205, A. A. Peters, Denver, Colo., 100.

First Vice President

A. A. Peters, Denver, Colo. 313, Jos. Russell, Toronto, Ont., 228.

Secretary

S. T. Campbell, Mansfield, Ohio, 918.

Time of Holding 40th Annual Meeting.

Second week of August, 284, Third week of November, 275.

Place of Holding 40th Annual Meeting.

San Francisco, Cal., 457, Detroit, Mich., 257.

March 4, 1915, Peoria, Illinois.

O. L. McCord, Election Commissioner

THE NEW STANDARD.

The first edition of the 1915 Standard will be ready for distribution about April 1st. We feel confident the poultry fraternity will appreciate the efforts of the Standard Revision Committee, and of the Editing and Publishing Committee in preparing for them the most complete Standard ever published. The illustrations are of superior quality, and represent the different breeds and varieties in as near a perfect manner as possible. The Committee and the artists have worked together harmoniously, and their work was approved by the members present at the Chicago meeting.

Many new breeds and varieties will be fully described in the new Standard and the following varieties illustrated; Anconas, Speckled Sussex, Bourbon Red Turkeys, Blue Andalusians, Campines and R. C. Black Minorcas.

The retail price of the Standard remains the same, cloth bound $2.00. Arrangements have been made with the publishers in Chicago to ship Standards direct to customers by mail. By placing your orders now you will save from one to two weeks' time in delivery. One year's subscription to The Poultry News, and the Standard, for $2.25. Book your order at once. The Poultry News, Dallas, Texas.

TO THE POULTRY PRESS
AND MEMBERS OF THE A. P. A.

Denver. Colorado.
March 21st, 1915.

Dear Mr. Editor:—

Kindly grant me space in your valued columns to thank my friends who without my solicitation have placed my name in nomination for President of the American Poultry Association.

With deep appreciation will advise that when told by Mr. Richards at Chicago last August that he would be a candidate for President this year, tendered my vote and influence towards his election, while I did not anticipate that it would become my pleasure to have this opportunity to withdraw and make the election of Mr. Richards unanimous, which I am glad to do, for having worked with him for several years am glad to say that he has but few equals in the Association and with a thorough knowledge of the needs of the membership will predict a very prosperous administration.

Thanking the membership for their show of appreciation will add that if they feel that my discharge of the duties of Vice President merits re-election, you will find my name upon the ballot for that position.

Yours fraternally,
Arthur A. Peters,
Vice President.

JOIN THE CHAMPIONSHIP CLASS SAYS ROHAN.

Advance Reports of Big Hatches Indicate Many New Belle City Winners.

By B. F. Niwas.

"21 Times World Champion Belle City Hatching Outfit" is a name that is now familiar to every reader of this publication.

It is safe to say that every poultryman-amateur and veteran-knows something about the hatching outfit thus described and the meaning of its title. There are 327,000 users of the Belle City in the United States. This of itself makes it a national institution, and if government recognition be needed, The Belle City has it in the fact that the United States Government Department of the Interior has chosen the Belle City, as well as leading agricultural colleges.

But the title "21 Times World's Champion" is chiefly important for the fact that it literally means what it says.

For the last five years, count has been kept of the championship winnings by the Belle City in established contests open to all incubators.

Each year has seen, the number of Belle City world championships boosted by a gratifying figure, but last season was the banner one by long odds. The Belle City took 12 championships-nearly as many as all other combined-making its grand total of world's championships 21.

Behind these brief facts is a wonderfully interesting story which has a personal value to every man, woman and child who goes in for chickens, whether with one incubator in a back yard or three or four on a big farm. The 21 world's champions were won on hatches entered in contests. Thousands of other Belle City users who did not enter the contests have scored 100 per cent perfect hatches. Many of these hatches have been photographed, and are shown with the Belle City owners in Jim Rohan's free book "Hatching Facts."

Every one of these Belle City winnings shows the easy way to poultry success. For instance, just consider what this means to a beginner. It is from the letter of Marinda Richmond, 17 years old, of Jones, Michigan.

"Although I am only 17 years old I took full charge of our Belle City Incubator and the hatch that won the prize for me in the 1914 contest was 100 per cent."

Or this from the letter of Otto Briske, of Chief, Michigan:

"I bought two Belle City Hatching Outfits this season and won in the 1914 contest with a 100 per cent first time, though I never saw an incubator in operation before. All I did was to follow your simple instructions. The Belle City is the best regardless of price."

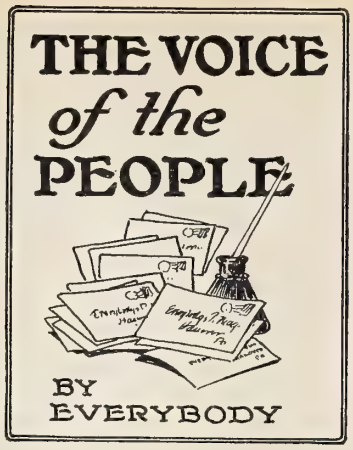
Or this from the letter of Mrs. Virgil Muse of Action, Indiana:

"I won with a 100 per cent perfect hatch in the 1914 contest. This was my first experience with an incubator of any kind, but the World's Champion Belle City is so easy to operate that anyone can run it with success."

Think of these successes, you who are wondering whether you have sufficient knowledge of hatching to go into the business, you who are struggling with the idea that an incubator is a complicated thing which requires an expert to run. A 17 year-old championship winner! 100 per cent perfect hatches by beginners who never had any experience with incubators before. There are scores of letters in Rohan's book "Hatching Facts" which you can have for the asking. Stories told in their own words by men and women, boys and girls like yourselves who faced the business just as you do, and are making money at it. Their experience is certainly worth a great deal-showing as it does how to start in the right way.

This year Mr. Rohan is making his proposition even more interesting by his offers of $800.00 in gold. These offers are open to all this season's purchasers of the Belle City. Full details are given in the big book "Hatching Facts." Anybody can go in for the gold-beginners or experienced poultry raisers-men and women, boys and girls. Judging by the success of winners like Marinda Richmond, a considerable share of the gold will be taken by beginners.

The main point is to get the book and start at once. Besides telling all about the gold offers, the book illustrates and fully describes the "21 Times World's Champion Belle City Incubators," and the world famous Belle City breeders-Big pictures show the outfit in actual colors. The book also contains Rohan's personal Ten Year Money Back Guaranty, the low pices and details of the one, two or three months home test which he offers. Any reader can get the book by sending a postal card direct to Jim Rohan, President Belle City Incubator Co., Racine, Wisconsin. Just say "Send me Hatching Facts," and the book will come by the next mail.



ANCIENT PRACTICE BETTER THAN NEW THEORIES

When the French Secretary of Finance laid before Napoleon a plan for revolutionizing the operating system of the Bank of France, the First Consul replied: "The world is old. It teaches us that ancient practice is often better than new theories."

The ancient governmental practice of letting business alone, of permitting the enterprising and the thrifty to direct their efforts and use their capital as they chose, created in the United States the greatest industrial advancement and prosperity, and built up the highest standard of civilization in 130 years the world ever witnessed. Sumptuary laws, the disposition of governments to direct and regulate the daily life and activities of their people, had previously led to the downfall of many nations.

We are just now learning by experience. For seven years past the United States government has been endeavoring to regulate business. It has discouraged the enterprising, thoroughly frightened the owners of capital and brought about a practical cessation of industrial expansion. Unquestionably it is being proved that our ancient practice was far better than our great grist of new theories.

HOMESICK FOR THE SPRING.

I,m living in a tropic clime,
Where many a beauteous thing
Is the gift of Mother Nature,
But I'm longing for the Spring.
Just to see the apple blossoms,
Pink and white on boughs that swing
'Neath that bending weight of perfume
In the glory of the Spring!
Just to hear the thrilling music
Of the robins as they sing
Wondrous carols, making vocal
All the beauty of the Spring.
Tho' I'm living in a country
Where the summer ne'er takes wing,
All its beauty cannot charm me
When I'm homesick for Spring!

—BESSIE E. HARVEY.

Root and Burton.

In the retirement of Mr. Root and Mr. Burton, the Senate suffers most serious loss, and loss of a kind that it can ill afford. In point of ability, few members will be left in that body who belong in the same class with either of these two. Mr. Root's preeminence has long been so thoroughly recognized as to require no dwelling upon; if he has never been a leading "presidential possibility," this has been for reasons affecting his availability, but not his personal qualifications as a statesman. Mr. Burton has, of course, been far from occupying any such place as Mr. Root in the eye of the nation; but he has made a record of unusual merit in both houses of Congress, and his reputation, always solid, has been steadily growing.—New York Evening Post.

FRIENDS.

No man can expect to find a friend without faults; nor can he propose himself to be so to another. Without reciprocal mildness and temperance there can be no continuance of friendship. Every man will have something to do for his friend, and something to bear with in him. The sober man only can do the first; and for the latter, patience is requisite. It is better for a man to depend on himself than to be annoyed with either a madman or a fool.—Owen Felltham.

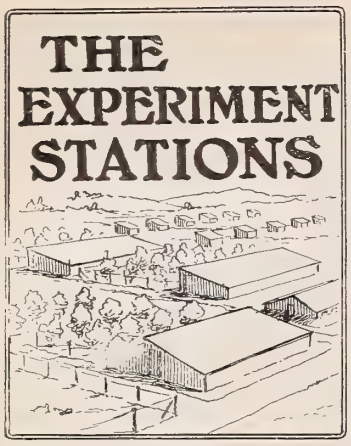
"Dad, Here's to You."

We happened in a home the other night and over the parlor door saw the legend worked in letters of red, "What Is Home Without a Mother?" Across the room was another brief, "God Bless Our Home."

Now what's the matter with "God Bless Our Dad" He gets up early, lights the fire, boils an egg and wipes the dew off the law with his boots while many another is sleeping. He makes the weekly handout for the butcher, the grocer, the milkman and baker, and his pile is badly worn before he has been home an hour.

If there is a noise during the night Dad is kicked in the back and made to go downstairs to find the burglar and kill him. Mother darn the socks, but Dad bought the socks in the first place and the needles and the yarn afterward. Mother does up the fruit; well, Dad bought it all, and jars and sugar cost like the mischief.

Dad buys the chickens for the Sunday dinner, carves them himself and draws the neck from the ruins after every one else is served. "What Is Home Without a Mother?" Yes, that is all right; but what is home without a Father? Ten chances to one it's a boarding-house, Father is under a slab and the landlady is the widow. Dad, here's to you—you've got your faults—you may have lots of 'em—but you're all right, and we will miss you when you're gone.—Warren County Times.



FEBRUARY REPORT OF THE MISSOURI EGG LAYING CONTEST

Average Eggs Per Breed for Four Winter Months.—Orpingtons have won February cups for four years.—Plymouth Rocks are Doing Well.

Some Baby Chick Troubles.

This is the time of year for "Baby Chicks." There are very few sights which cause one's face to light with smiles more than to see a brood of nice, fluffy, thrifty, little chickens. Too often the scene changes in four or five days, and the hopes of the owners are blighted for the little chickens grow sick and weak, finally dying, and the owner cannot locate the trouble. Many causes of trouble with baby chicks may be traced to one of three sources, namely, heat (too much or not enough), feeds, or crowding.

While the chick was yet in the shell the egg may have been heated to such an extent that the yolk was hardened till it could not be used by the chick, yet the heat was not great enough to kill the chick. Chicks in this condition look strong and healthy for a few days, but soon get sick and die.

This condition is found with chickens hatched in incubators only as the hen's temperature does not get high enough to cause this trouble.

After the chicks hatch, the mistake is often made of keeping them too warm, which has a tendency to weaken them. The best brooders are arranged so the chicks can find the temperature they like.

Letting the chicks get chilled is just as injurious.

The second cause for losses among baby chicks is the feed. Just before the chick is hatched it takes the yolk into its body. This is a little lunch basket given to the chick by nature to supply it with food till it learns how to eat after it comes out into the big world. Much has been said about feeding baby chicks as to what, when and how to feed. Some people seem to think that because a little chick is picking at everything it sees that it is hungry, so they feed it at once. The little chick is a new creature in a strange land investigating through curiosity and is not really hungry. Other people know that the chick has the yolk inside its body and that it contains food enough to last the chick for several days so do not feed it for three or four days.

These are the extremes and either of them may do injury to the chick. To feed as soon as hatched would gorge the digestive system with to much food, and to wait four or five days, the labor required of the digestive system would be too great for its strength.

The better plan is to begin feeding small quantities of food at from 24 to 48 hours and increase the feed as the yolk decreases. Nature does not like abrupt changes. Hard boiled eggs ground fine, shell and all, mixed with bread crumbs are good for the first two days, then change gradually to rolled oats and wheat bran. After the chicks are five or six days old, feed a mash composed of equal parts wheat bran, rolled oats, shorts, corn meal and to each 100 pounds, add one half pound fine table salt and two pounds of fine charcoal.

In the afternoon moisten enough of the dry mash with sour milk or buttermilk that it will take the chickens twenty or thirty minutes to clean it up. Do not mix enough feed that some will be left to spoil.

Begin gradually to feed a good grade of scratch feed, feeding but very little at first. Keep grit before them all the time. It is a good practice to give a few drops of sour milk or buttermilk to a chick as soon as it hatches. It helps to control diarrhea. Keep either a good grade of sour or buttermilk or water before the chicks at all times.

The third cause for trouble is crowding. A chicken cannot sweat like many animals do, for they have no sweat glands in the skin, therefore, much of the impurities and moisture must be carried out through the breath. If the chickens are crowded without proper ventilation, the air cannot do the work it should. This places an unusual strain on the kidneys, which results in a weakened system. The chickens come out in the morning weak and tottery with little or no appetite. This is often responsible for the weak, low vitality birds after they get older.

If a chick is properly hatched, fed and cared for, there are very few diseases which will affect it.

THE MISSOURI CONTEST.

The contest is moving along nicely with all pens doing good work.

Considering the breeds by adding all varieties together in each breed during the past four months of December, January and November and February, the Leghorns averaged about 33 eggs each; Plymouth Rocks, 40; Campines, 33; Orpingtons, 39; Missouri White Fulffs, 28; Rhode Island Reds, 30; Anconas, 30; Langshans, 33; Black Minorcas, 37; and Wyandottes, 42.

Of the ten highest pens for the four months there are four Plymouth Rock pens, two Wyandottes, two Leghorns, one Orpington, and One Rhode Island Red. They are as follows:

Pen 26 Buff Wyandottes, 277 eggs, Pen 34 Barred Plymouth Rocks, 269 eggs, Pen 40 Barred Plymouth Rocks, 266 eggs, Pen 4, S. C. White Leghorns, 262 eggs, Pen 38 White Plymouth Rocks, 260 eggs, Pen 47 Buff Orpingtons, 256 eggs, Pen 24 White Wyandottes, 255 eggs, Pen 14 S. C. White Leghorns, 249 eggs, Pen 36 Buff Plymouth Rocks, 245 eggs, Pen 35 S. C. Reds, 237 eggs.

Of the ten highest individuals there are four Plymouth Rocks, two Orpingtons, two Langshans, and two Leghorns.

Relation of Standard Quality to Utility Value By A. P. Marshall.

During this period of extravagant effort towards the production of fowls that will merely produce for a time a remarkable number of eggs, it seems with any real fancier or producer of poultry that it is wiser to establish one that will have the longest permanent value, to think carefully what he is tending to when he forgets everything but the mere production of something that will produce an egg or two more than when he has been able to get in the past. There is no doubt that a very great deal has been accomplished and a very great deal more doubtless will be done in the future to increase the egg productiveness of the various breeds, and any effort along these lines should be very greatly commended and assisted by any true breeder in the future of the American hen. The danger, however, seems to be that as the breeder is generally observing the efforts, and the reports that are made with regard to these heavy egg records, a craze becomes evident that causes them to forget everything else with regard to the subject, or in other words, they become extremests in the same sense that a fancier does who forgets utility value entirely and breeds to a type that could not possibly give good service and produce a marketable product at a fair margin of profit for the cost of production.

Luckily is it for the large number of poultry fanciers that such an association exists as the American Poultry Association, with level headed poultrymen who are always striving to protect the breeders by making standard requirements that call for utility value as well as gracefulness. The White Wyandotte with which we are most familiar has been safeguarded in this way, by having the standards read in such a way as to prevent the producing of specimens

too short in body to enable them to be heavy producers, but at the same time it would be the height of folly for a White Wyandotte breeder to consider that the longer he gets his birds, regardless of anything else, its most valuable qualities and making it not more than the Leghorn from market point of view; viz, to produce eggs with nothing else to commend it.

We are frequently asked by people of a practical turn of mind what value Standard birds can have at high prices when something can be secured for a very small amount that will practically do the same thing. Our only repy to this can be that the fancier who is producing to a standard, either for excellence of appearance and type, or for entirely heavy egg production by using scientific methods of line breeding fixes features that make it possible for the utility man to secure fixed values that he could not get in any other way. If one took a flock of several thousand birds and by the introducing of birds of better type, could improve that flock so that their conformation would have an increased depth together with an increased length or any other desired attribute that would improve the whole flock so that the utility man can secure very much more than the cost of introducing the line breed specimens that would produce that result. We think it is very much to the interest of all true fanciers to see to it that the ideals to which they are tending always allow for increased value from utility point of view and not only from one angle such as the production of eggs or the production of meat, but should embody as much as possible as many values that can be secured in the breed that the fancier is working with.

When a breeder of poultry, who has a breed of good strain, becomes tempted to think he can improve it by mixing it with some other totally different type of bird, we find he is just stepping from one position of having something designed to give him some definite results to the uncertainty of the indefinite product such a union will bring. And why is it a fact that standard bred birds of good strain are so persistent in producing desirable market qualities for which they have been bred? Simply because mixed ideals have been worked for with the gratifying results that these have gradually been more nearly attained by careful selection and line breeding.

On this account it is possible for the purely market producer to secure from the standard bred fancier, specimens that will very much improve the type of his stock and on that account of the fixed values in these line bred birds the features desired will be likely to predominate to a large extent.

The fact that our best poultry fanciers are of a decidedly intelligent class would certainly be assurance that breed values would not be sacrificed for temporary whims or fancies. We are convinced that true breeders who will last through all stages of the evolution of their breeds are those who adhere to those attributes of their observations prove, give good practical results as well as improve the physical appearance of the breeds.

Then again anyone can usually tell, even if they do not know breeds, that a flock is standard bred or not, merely because of their naturally healthy and vigorous condition. Largely, of course, this is due to the better care such birds get on account of the greater interest they encourage than would birds of mondescript origin. No man can do the best work unless he is thoroughly interested in it. In working for certain results that inspire a feeling of price, his work becomes doubly interesting and besides producing a product of better values, he is able to engage in a work which he thoroughly enjoys and with which he therefore can expect better results.

People have come to us wanting to secure cockerels to cross with other breeds with the idea of improving the qualities of what they have. If such a person has some other breed of good strain we always do our best to discourage him, feeling sure he will only be disappointed eventually and decide to have a real breed that he can appreciate. Our advise to such a one is always "stick" to your own breed, or "if you wish White Wyandottes, we can serve you." Of course where his flock is of doubtful origin or value, no harm could result but on the other hand good utility values be secured.

Let us hope the fanciers will always be able to show how much they are continuing to do for the improvement of their breeds for the benefit of the utility man. So long as he does, no limit should there be to the service he can render the poultry grower generally and reap the profit he can secure for the sale of his superior stock.

DRY FEEDING BECOMING POPULAR.

By Michael K. Boyer.

Of late years dry feeding is becoming quite popular, although it is not a new idea in the poultry ranks. Fully 20 years ago the matter was agitated and adopted by some poultrymen, but as a general thing it was not favorably received.

The arguments used today in favor of the dry mash and whole grain diet are, first after becoming used to it, fowls will prefer the ground grain dry to that which is either cooked or steamed; second, it is a labor saving method, better fertility to the eggs.

At first the fowls will not take very kindly to the dry feed. As meat scrap is mixed with it, they will pick out all such, then probably the cornmeal, or some may prefer the bran, but all of it is seldom consumed until the fowls become accustomed to it. Gradually they will eat more and more of it, finally cleaning the trough. Another benefit is that eating a few mouthfuls they will repair to the drinking vessel and secure several swallows of water, then back again to the trough, and so on during the entire meal. It is claimed that more water is consumed by dry-fed fowls. and as water enters so largely in the composition of the egg, increased egg production should be the result.

The method is a great labor-saver. It is possible to both feed and water the stock in the same time it takes to prepare the wet mash and feed it.

The writer prefers feeding the dry mash in troughs instead of hoppers unless a hopper is used that will be proof against mice and rats. Such a hopper should be constructed of galvanized iron, and made to close at night and open in the morning. If large enough to hold sufficient material for several days' feeding, still more labor can be saved.

There is also a decided advantage in the system from a health standpoint; There is not so much danger of overfat hens, and consequently there will be less soft--shelled and deformed or ill-shaped eggs. There will be fewer cases of bowel disorders, and less trouble with indigestion. Wet mash allowed to remain in troughs any length of time during hot weather will sour, which is the cause of many cases of sickness.

For growing chicks it is recommended. They eat a few mouthfuls and then take a swallow of water and scamped off for a run. In a few moments they return and repeat the dose. They never gorge themselves, and when they feel a little hungry a little food helps them out. At night an extra allowance of food is placed in small boxes in their houses so that the youngsters can help themselves at break of day. Nothing gives a chick a worse setback than pining for food.

But we like the mash only to be fed fowls in that way. The whole grain should be strewn among some light litter, like leaves or cut straw, so that the birds must scratch for all they get. This excercise is needed. The grain should be given at least an hour before time for them to go to their roost, so that ample time is given to hunt. If thus fed in a scratching shed, the fowls will continue their search the next morning at break of day, and the attendant will find them hard at work when he comes around to give them their breakfast.

Referring to the theory that eggs wrinkled at the narrow ends produce cockerels an English writer says, to the student of embryology this fallacy is at once apparent. For the first few days the chicken is sexual, from then to about the seventh day it is dustubetly hermanphrodite, and contains within itself the elements of both sexes. After this stage it divorges in one direction, one set of organs developing and the other diminishing, according to whether the germ is going to produce a male or female. So that if the germ had a living consciousness it would not know at the day which sex it would ultimately be.

Overfat is a poor market condition. Fowls shoud be fed fattening food two weeks before marketing. Fat poultry, if dry picked, will cook better. Plump and neat carcasses advertise themselves. Short-legged fowls generally make the best table poultry. Never pack poultry for shipment until they have been thoroughly chilled. Never market ailing chickens, never ship the latter part of the week, except by special order.

"Squab broilers" must not weigh over three-quarters of a pound each; generally a half pound is most acceptable. They bring the best prices when marketed during January and February.

It is generally estimated that broilers shrink a half pound each when dressed.

Duck raisers pack 40 dressed ducklings in a barrel for shipment.

Eggs and Chicks From LAURELTON LAYERS

shipped safely to you from the great S. C. White Leghorn plant of the East. We have thousands of thrifty layers in most sanitary quarters supplying an enormous daily egg trade both for table and hatching purposes. Our birds are bred for size, vigor, beauty and heavy egg production. They're winners. We offer you from this unbeatable strain

50,000 Day Old Chicks

guaranteed to arrive safely and in full count, hatched from our 48,000 egg incubators. Prices for April, $9 per 50 chicks, $15 per 100, $140 per 1,000; May, $7 per 50, $12 per 100, $120 per 1000. All chicks and eggs from our own stock.

Eggs for Hatching: $8 per 100, $70 per 1,000. 85% Fertility guaranteed. Write for complete price list today. Don't delay, for our eggs and chicks will go fast.

LAURELTON FARMS
Lakewood, N. J.
Box E

There seems to be a difference of opinion about the size of a breeding pen for good fertility, as will be seen by the following table giving the number of hens for a male:

Authority	Asia.	Amer.	Med.
Jones	12	20	
Buffinton	12	20	
Young		15	25
Stevenson		15	30
Curtiss	8	10	12
Colby		15	
Felch	12	15	
Coburn		15	
Crangle		15	

The critical period of the turkey is the first eight weeks of its life. About 48 eggs is the average yearly record of the hen.

The late P. H. Jacobs once made a test with chickens of different breeds, using 10 chicks of each breed, so as to secure an average. When one month old, 10 young Brahmas (together) weighed seven pounds and two ounces, while 10 chicks of the Wyandottes, Leghorns and Plymouth Rocks, weighed seven pounds (every ten), or only two ounces less than the Brahmas. The second month the 10 Brahmas weighed 17 pounds; 10 Wyandottes 15 pounds, 10 Leghorns, 14 pounds; and 10 Plymouth Rocks, 14 pounds. The third month the 10 Brahmas weighed 33 pounds; 10 Wyandottes, 30 pounds; 10 Leghorns, 24 pounds; and 10 Plymouth Rocks, 25 pounds. Of individual chicks, the third month the heaviest Brahma weighed 3¾ pounds; and the heaviest Leghorn 2½ pounds.

For poultry food, pea meal will be found nutritious, rice easily digested, linseed meal carthartic, potato starch digestible, barley nutritious but laxative, and oatmeal more nutritious than either wheat or barley. There is fully 5½ per cent of fat in oatmeal. Gorn contains from seven to eight per cent of yellow fat.

Each Spring there are more or less complaints that the wing feathers of chicks of the Mediterranean class grow so fast that the wings droop and the chicks loses vitality. A number of authorities have been consulted with the following result: Bause advises pulling the large wing feathers as soon as the chick droops. Arnold says he finds sweet milk the best preventative for this trouble, giving milk instead of water to drink. White advises clipping the ends of the wing feathers. Kulp believes in cutting rather than pulling the wing feathers. He says pulling them might injure the socket where the feather grows. Howell says he makes it a practice to clip off the ends of the flight feathers on all chicks when they are ten days old.

But, after all, is it the rapid growth of the wing feathers which causes the chick to droop? Is it not more reasonable to believe that the body fails to develop as it should? There certainly must be something wrong in the management that produces such forlorn specimens of chickenhood.

Compare a drooping chick with one that carries the wings folded close to the body. Take it in your hands. Notice the difference in weight, feel how sharp and bony is the breast of one, and how plump the other. Look at the legs—it will take both of the one to equal in size the strong, thick shank of the other. How weak the bird is; it scarcely moves when you grasp it. And the other: why you can feel every muscle struggling in your hands. It is full of life and strength. Give them their liberty: The droopy one goes a little way and stands exhausted. Those dreadful wings seem to bear him down to the earth. The other chick darts from your hands the moment you relax your hold, and flies from the restraint which was so hateful to his vigorous little body. It certainly does seem that it is cruel to prolong the life of a chick so puny that it cannot carry the weight of its own feathers—if it is not so cruel, is it profitable to raise such specimen?

PHILADELPHIA POULTRY ASSOCIATION.

The Philadelphia Poultry Association held their Annual meeting at the Adelphia Hotel, March 17, elected officers and made special preparations for their next show to be held, December 14th to 18th, 1915. This will be their tenth Anniversary Show and one of special import.

The officers elected were President, Henry D. Riley; Vice President, Rudolph Sweisfurth; Treasurer, C. Carroll Kempton; Secretary, Frank E. Gilbert; members of Executive Committee, H. Ross Smith, W. W. Deissler, Jos. Elia and B. W. Cooper.

The Banquet and meeting was largely attended and enjoyed by all. Speeches were made by Messrs Riley, Nevious Gilbert, Schwab, Deissler, Schlicter, Sweisfurth, Smith, etc.

Their 10th Anniversary show promises to be one of special interest. New features will be adopted and every effort made to make this the largest and best show ever held in Philadelphia. Their past shows have been very successful, their last greater and better than ever and it is hoped their future efforts will meet the success so well deserved.—J. T. H.

Rhode Island Red Club of America

The following are the officers elected for the ensuing year, 1915-16.

L. W. Maxson, President, Scranton, Pa.
F. M. Anderson, Vice President, 323 2nd Ave., Altoona, Pa.
J. P. Kerr, Secretary & Treasurer, Rennerdale, Pa.
J. A. Rose, Election Commissioner, Scranton, Pa.

Executive Committee as follows:

C. H. Tilton, 306 Board Trade Bldg., Scranton, Pa.
C. E. Fanning, Alba, Bradford Co., Pa.
Chas. A. Keihl, Williamsport, Pa.
John Ehringer, 2905 Walnut Ave., Altoona, Pa.
Aaron Fell, Perrysville, P. O., Pa.
J. C. Spencer, Sewickley, Pa. R. F. D. Schenley Heights Poultry Farm.

The latchstring is always out and new members are invited to join. Address the Secretary.

COLUMBIAN WYANDOTTES AND THE CLUB

By Mr. Ralph Woodward, Secy', Grafton, Mass.

The new Standard of Perfection will call for "bluish slate" undercolor on all Columbian and Light Brahmas.

This change in the Standard from "white, bluish-white or slate" is the best move ever made to make the judging of Columbians easier by causing less confusion in the right description of under-color, and also, will make the breeding easier because those who know, those who have bred Light Brahmas and Columbian Wyandottes many years, know that a certain amount of good, strong undercolor is also absolutely essential in the parents, in order to produce chicks that will come up to Standard requirements, and not fade out in the first year's moult.

Choose for your female breeders, shape, or Wyandotte type above everything else, as it is a fact, almost generally conceeded, that the female in breeding influenced the type of the off-spring more than does the male. Chicks to a greater or less extent get their type from their mother and their color from their fathers.

With good type in females, try to get those with red eyes, small even combs, red ears lobs, well laced hackles and black tails, black to the skin.

For your breeding males, use one with strong black flight, and black tail, white back and not too strong in under-color. Look out for frosted hackles which is an unpardonable sin, and be sure your male has well striped tail coverts. Stubs on shanks of either males or females should not be tolerated. It disqualifies.

One often hears the remarks that Columbian Wyandottes are hard to breed. So they are, unless one uses good judgment in selecting breeding birds.

The quality of Columbian Wyandottes is fast improving as we see them in the Poultry Shows. Females, with clear white surface backs are now the rule instead of the exceptions. Better hackles and tail coverts are shown on both males and females, also the approach to good Wyandotte type is fast coming and is welcomed by judges and exhibitors in all the shows.

We feel the National Columbian Wyandotte Club is doing a good honest work for the advancement of the breed and this is attested by the goodly number of new members who have lately joined the club, even with yearly dues at $2.00 and the interest and enthusiasm of its older members.

The Club gives its special Club Ribbons at all shows, Silver cup at some shows and this season, for the first time, its members have been in competition for Gold, Silver and Bronze metals for Championship honors in all shows in the U. S. and Canada. These medals are awarded on the most points won and the number of points allowed at any show is in direct proportion to the strength of the competition.

The Club has just issued its first, Columbian Wyandotte Quarterly, of which D. Lincoln Orr is editor and copy of same, as of the Annual Catalogue and membership Card, may be had by addressing the Secretary.

SUSSEX CLUB MEETING.

The annual meeting of the Sussex Club of America was held during the Madison Square Garden Show in New York. The meet was notable for enthusiasm, good fellowship and the supreme confidence in the future of the breed. A resolution was passed calling upon all judges to consider type first, surface color second, with no mention of undercoler. A year book was authorized and it is now ready for mailing. The Sec'y will be pleased to send a copy to all interested in the breed. Address F. L. Platt, Sec'y, Swanton, Ohio.

The following officers were elected for the year: President. H. H. Coburn; Vice Presidents, W. M. Patteson and Robt. Essex; Executive Committee, A. A. Carver, Dr. E. K. Conrad and Len Rawnsley; Sec'y-Treas., F. L. Platt.

Membership in the Sussex Club is $1.00, and every breeder is invited to join and thus do his share in helping the Club to carry on the great work of advancing the interests of the breed. 1,000 Club ribbons will be offered at the shows next fall and winter. Join now and help the Club and be in line to compete for these fine Club ribbons.

Oat Sprouter $2.00

ARTHUR W. BISHOP, PATERSON, N. J.

BUFF LEGHORN CLUB MEETING.

At the recent meeting of the above club the following officers were elected:

President, F. A. Tecktonius, Racine, Wis.; Eastern Vice Pres., Archibald B. Dalby, Red Bank, N. J.; Western Vice-Pres., W. H. Boyle, Jubilee, Vancouver, B. C., Southern Vice-Pres., Richard E. Sims, Little Rock, Ark.; Middle West Vice-Pres., Frank S. Smith, Hamilton, Ohio; Secretary-Treasurer, Geo. S. Barnes, Battle Creek, Mich.; Executive Committee: Wm. Ulmer, McKeesport, Pa., Chris. H. Leitner, Elgin, Ill., A. T, Lindgren, Kingsbury, Calif.

It was decided to make an extra effort in offering Silver Sets and Ribbons to coming shows. It was planned also to issue a new catalogue and work on the same is now in progress. All readers interested in Buff Leghorns are asked to join this club and get their names in the next book along with the best of them. A few old books yet left can be had by asking and they are valuable to all interested, a better one can't be had. It is a well known fact that the Buff Leghorns are one of the Leghorn family leaders and for egg basket fillers can't be beat. Geo. S. Barnes, Secretary, Battle Creek, Mich.

NOTICE

The Natonal Rose Comb Orpington Club book is ready for mailing and everybody interested in Rose Comb Orpingtons should not fail to get a copy. 15 cents is charged for the postage and cost of mailing. Members receive copy free. If you have not received your copy, you have not paid your dues for 1914. By sending $1.00 to the Secretary, you will be entitled to club book and dues until October 1, 1916, and all breeders not members are urged to join with us and help the breed. Rose Comb Orpington breeders sit up and get awake. We have a valuable breed and there is something doing.

For further information, Write E. M. Mengel, Sec New Ringgold, Pa.

The Kansas City Poultry Club have issued a neat and interesting year book which the Secretary, Mr. Fred G. Puffer, states will be mailed free to any one interested.

We wish to compliment this club (whose Slogan is) "The Club That's Alive" on the up-to-date manner in which they are handling the affairs of the interest to poultrymen of that section of the country. We believe if others would follow along these lines, great good would be accomplished.

Jackson, Michigan, have made the announcement through their Secretary Mr. F. B. Wedow that January 19-23 has been selected for their 1916 Show, with Mr. Frank W. Traviss as judge.

Easy to Raise Strong Vigorous Baby Chicks

under the International Sanitary Hover, and their is no carpenter work needed to install it. Place Hover in any building free from draughts. To set it up, merely light the lamp and set it down, and it is ready for use. Made of metal, it is always sanitary. Circular—no crowding, no smothering, warmest just inside the curtain. A life saver for chicks,

420 In ternational Sanitary Hovers used yearly on Ranco cas, "The Million Egg Farms." Other prominent users: Wm. Cook & Sons, Prof. Harry R. Lewis, N. J. State Agricultural College, M. C. Kilpatrick, State College, Pa., Rufus Delafield, and scores of other leaders. Hovers 100 chicks. Stands test of any climate. Costs only 1½c. a day for fuel. Burns oil or gas. Price complete $8.50. BETTER THAN CHARCOAL.

Have you ever noticed the beneficial effect of charcoal on your birds? Do you know why it is so important to the health of all your birds—from chicks to mature fowl? Just this: Charcoal has the power to absorb nine times its specific gravity in liquids and 88 times its cubic capacity in gases. It thus regulates digestion to a remarkable degree—perhaps more than any other single agency. It aso supplies certain inorganic compounds necessary to quick growth and maintenance.

But pure charcoal has been improved upon, or rather, added to. It does not contain antiseptics or germ-killing ingredients nor healing oils. These are supplied in a splendid new article on the market called "Charc-Oil"—a **phenolated** pure hardwood charcoal. There is nothing like it in composition and many of the best poultrymen of the East, who have tried it, claim it to be "the missing link" and "safety first" ingredient in poultry raising.

Birds of all ages have a natural craving for it. It is agreeable in flavor and odor and does away with all dosing and swabbing. Just mix it in the mash or put in open hoppers and the birds doctor themselves.

If chicks are developing slowly and unevenly, or have ruffled plumage, 8 to 10 pounds of "Charc-Oil" in 100 pounds of mash feed tightens up the feathers and "sets em on their feet."

When birds of any age are suffering from digestive troubles, due to eating immature grain, drinking water from puddles, etc., "Charc-Oil" will work wonders. 5 pounds of "Charc-Oil" in 100 pounds of mash for half grown chickens, ducks and turkeys, and 2 to 5 pounds for adult fowls, does the work.

This product was originated at the suggestion of a physician who had uncommon success in treating sick chicks with Pheno-Septol, the principal ingredient of "Charc-Oil". This is the ingredient that destroys germs. Other various oils heal and soothe.

"Charc-Oil" is manufactured by the King Remedy Co., 21 Elm Street, Rochester, N. Y. A Free Service Bureau is maintained and questions gladly answered. Prof. C. A. Rogers is in charge. His former position as instructor and investigator in poultry husbandry at the State College of Agriculture, Cornell University, Ithaca, N. Y., and his present work as a breeder of White Leghorns at Bergen, N. Y., make his word valuable. Write for literature and ask some questions.

War-Time Crops.

"Plant wheat" seems to be the farmers' slogan just at present. Reports say that there is a large amount of winter wheat under the snow and that thousands of acres are going to be planted with wheat in the spring. The fighting nations of Europe want wheat and lots of it. This great demand will probably cause the grain to command even higher prices than the recent quotations of $1.50 a bushel.

High-priced wheat means much to the farmer. It is well known economic law that porr land, which might not be worth cultivating with wheat at $1 a bushel, could be made to yield a good profit with wheat selling for $1.50 a bushel. As the price goes higher, more inferior soils can be made to pay, and the farmer with "bad acres" on his land benefits accordingly. This increase in the amount of tillable land has a wholesome effect, for it increases the wheat supply and prevents the price from soarng to heights which might seriously embarrass consumers of wheat.

The owner of the farm of small size and entirely under cultivation should be cautious in considering the wheat question. He can probably safely count on the war's lasting the rest of the present year. So his problem is to estimate what price wheat is likely to bring next fall, and compare, on the basis, the income from his usual crops. The character of his soil and the location of his farm would also have to enter into such calculations. A farmer should consider his own particular case carefully before allowing the "wheat craze" to sweep him off his feet.

On the other hand, the farmer who thinks that he has more land than he can profitably work should lose no time in getting accurate information as to the cost of preparing his land for wheat, and in getting opinions from reliable sources as to the probable price of wheat next fall. It should be remembered that even if the European war should come to a sudden end, European crops for the coming season will surely be far below normal.

Now's the Time.

Here, you discontented knocker,
Growlin' 'about the country's ills,
Chloroform your dismal talker;
Take a course of liver pills.

To Everybody:

You have now come to the last page of the first issue of Everybody's Poultry Magazine. Look it over again. Note the make-up and quality of paper used. Read it through, then tell us how you like it. We hope we have pleased you and that you have found herein something beneficial and of interest to you. If you think it worthy **BOOST.** Tell everybody. We will appreciate this. Our policy is well outlined in the make-up of this issue, it is one that stands for poultry success and we hope ever to merit the support of every loyal fancier and true breeder. Your friends, like yourself, will appreciate this magazine and we now ask the favor that you remember and recommend it to all.

Yours very truly,

Everybody's Poultry Magazine Pub. Co.

WHITE WYANDOTTES---Mountain Strain

Winners at N. Y. for 12 Successive Years

and every large show from Canada to Texas. Eggs from 12 matings not excelled, if equalled, in America, at the lowest prices ever heard of for top notch quality. 30 per cent reduction after May 5th.

All breeders tested by State Agricultural College for white diarrhea, which insures better hatches and the livability of the chicks. Send for mating list of exhibition and utility matings. 400 breeders. Eventually why not now.

West Mt. Poultry Yards, BOX B, Naugatuck, Conn.

F. B. Williams, Prop.

Single Comb Rhode Island Reds

TESTED, TRIED AND TRUE WINNERS

At the great Baltimore 1914 show on 19 birds entered, 17 were placed and won special for best display. Also winners at Philadelphia and Hagerstown. 1915 matings cannot help but produce a large percentage of prize winners. Eggs, $2.00, $3.00 and $5.00 per setting. Large lots a matter of correspondence. Stock for sale at reasonable prices. Fertility and satisfaction guaranteed.

GEO. W. WHITE, -:- HAMILTON, MD.

ALDRICH WHITE ORPINGTONS

have won more first prizes during the last three seasons in CHICAGO and MADISON SQUARE GARDEN than all our competitors combined, thus proving them the "Champions of America".

WINNERS IN LAYING CONTEST

At the National Laying Contest, Mountain Grove, Mo., Aldrich White Orpingtons have been at the top for the five months ending April 1st. Eggs now half price.

Aldrich Poultry Farm, 6056 N. High St., Columbus, Ohio.

RESSEQUIE'S Barred Rocks

Win at the National Barred Rock Club Show Pittsburg, Pa. Jan 1915—Cock 1-3. Hen 6-7. Cockerels 1-5. Pullets 2-3. Pullet Bred cock 1. Cockerel 1-3. Cockerel Bred Hen 1-3. Pullet 2-3. Old Pen 1. Young Pen 2-3. Cockerel Mating Pen 1. Best Display. President Cup. Best Display in Show, Councilman Cup, Champion Male, Shape Male & Female. Etc.

Shorewood Peerless Vegetable and Flower Garden

Ten Choice Vegetables

Beet, Carrot, Cabbage, Cucumber, Lettuce, Onion, Radish, Parsnip, Tomato, Turnip.

Six Standard Flower Seeds

Aster, Balsam, Cosmos, Nasturtium, Phlox, Sweet Pea.

16 Large Packets 26c

In this collection we use the John Baer Tomato. It sold last season for $1.00 per Pkt. This collection is worth $2.00—you buy it for 26c and you get full cultural directions for vegetable and flower growing, worth in itself more than we ask for the seeds. **Very special.** A copy of "Good Poultry" (10c), our quarterly magazine; also a copy of "Intensive Farming," a valuable book for poultrymen, vegetable and flower growers, fruit growers, etc., all included in this wonderful offer.

If you want an extra Pkt. of John Baer Tomato, add 25c to this collection price. If you want an extra Pkt. of any other vegetable or flower seed named in this grand offer, add 5c per Pkt.—one-half regular price. This is the greatest offer we have ever made to the farmer's wife or the back yard gardener. Everything just as good as can be. If not entirely satisfactory, money refunded upon return of collection at our expense, without argument. This offer is made to introduce Shorewood seeds to you. Good as long as stock holds out. Write tonight.

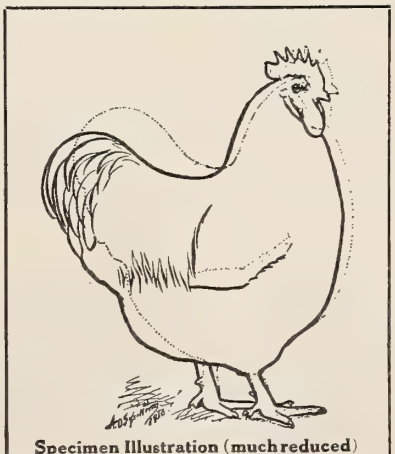
The ORPINGTONS

BLACK, BUFF AND WHITE

A COMPLETE AND AUTHORITATIVE TEXT BOOK and Instructive Treatise devoted to the Orpington Fowl, the most popular breed in England and one of the leading favorites of Standard-bred poultry in America. This book (80 large pages and cover) tells how to select breeders and how to mate for best results. Care, feeding and management fully discussed.



Specimen Illustration (much reduced)

Edited by J. H. DREVENSTEDT,
Breeder and Judge of 25 years' experience and member of Standard Revision Committee 1898, 1905 and 1910.

Fully Illustrated by F. L. Sewell, A. O. Schilling, I. W. Burgess and others.

CONTENTS:

Chapter I—Orpington Origin.
Chapter II—Orpington Type.
Chapter III—Black Orpingtons.
Chapter IV—Buff Orpingtons.
Chapter V—White Orpingtons.
Chapter VI—Non-Standard Varieties.
Chapter VII—Orpingtons as Exhibition Fowl.
Chapter VIII—What Breeders Say.
Chapter IX—Orpingtons as Utility Fowl.

The most valuable feature of all. Text and Illustrations are based on the changes in the 1910 American Standard of Perfection.

Tells what changes were made, why they were made and how they will affect the mating and breeding problems that now confront the breeders of Orpingtons. Progressive breeders and exhibitors who wish to keep abreast of the times cannot afford to be without this book. Text supplemented by over sixty illustrations, by Sewell, Schilling and Burgess, a study in pictures that will prove valuable to breeders, bringing clearly before the eyes of all Orpington admirers in the minutest detail every point of value in the fowl. The book consists of 80 large pages, 8½x11½, is printed on first class paper and bound in a handsome cover.

PRICE, 75 CENTS, POSTPAID, or $1.00 including a year's subscription to this Journal, or will be sent free for three annual subscriptions at 50 cents each.

Everybodys' Poultry Magazine, Hanover, Pa.

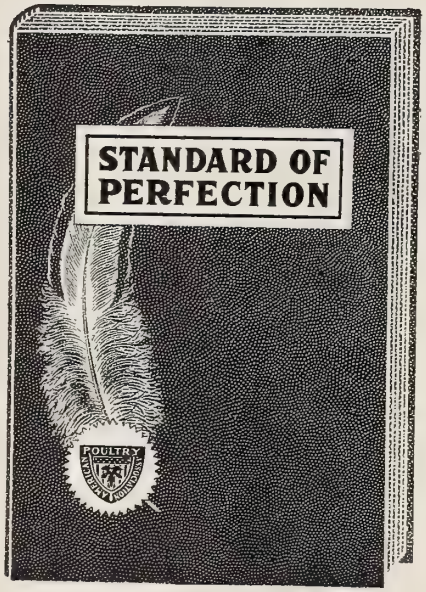
American Standard Of Perfection

1915 Revised Edition



1915 Revised Edition

The only American authority on the required characteristics of all breeds and varieties of Chickens, Ducks, Geese and Turkeys. THIS GREAT BOOK has just been revised and gives the correct Standard Shape, Color and Weight of every recognized variety of poultry, as well as the disqualifications of each variety.

THE BOOK YOU NEED

You cannot raise, mate, exhibit or sell fowls intelligently without it. The book contains all the NEW BREEDS admitted to the Standard. It also contains ideal illustrations of the different varieties of fowls photographed from living models and gives the correct color of plumage on your birds. It's a guide to success in the poultry business. No one can breed birds of any variety for exhibition without a copy of the **American Standard of Perfection** as a guide, and it is the only book of its kind published in this country. It is authorized, copyrighted and published by the American Poultry Association. Price postpaid, cloth, **$2.00**; leather, **$2.50.**

Everybodys Special Money Saving Offer

The Am. Standard of Perfection (cloth) and Everybodys Poultry Magazine for One Year **$2.25**

If you want leather binding add 50 cents to above price. Canadian Subscribers add 25 cents per year for Postage. Foreign Subscribers 50c per year for Postage.

We are now booking orders for delivery for April 10th, 1915. If you want your copy early, order at once. Address

Everybodys Poultry Magazine, Hanover, Pa.

Above is shown an unretouched illustration of Mr. D. W. Young's first prize S. C. White Leghorn cock at the 1915 Madison Square Garden, New York show. There he stands in all his natural beauty just as bred, grown and matured, an ideal for all to follow, a perfect model in style and shape. Back of him are the years of study and of breeding skill, years of devotion to a cause for the betterment of poultry, all the work of Mr. D. W. Young. While we appreciate beautiful specimens and great winners, let us also try to appreciate the value of such birds and of such breeders to the industry in general. Mr. Young has within a few years refused a cash offer of $10,000 for a single bird of his. He has passed this price just to give the world a nearer perfect Lgehorn and to complete the work he set out to do. When we look upon pictures as above and know them to be absolutely life-like, natural and true, we can then better appreciate this man's success and the credit due him for the grand work he has done.

EVERYBODYS POULTRY MAGAZINE

Vol. XX. HANOVER, PA., MAY 1915 No. 5

THE ADVANCE IN WYANDOTTE TYPE

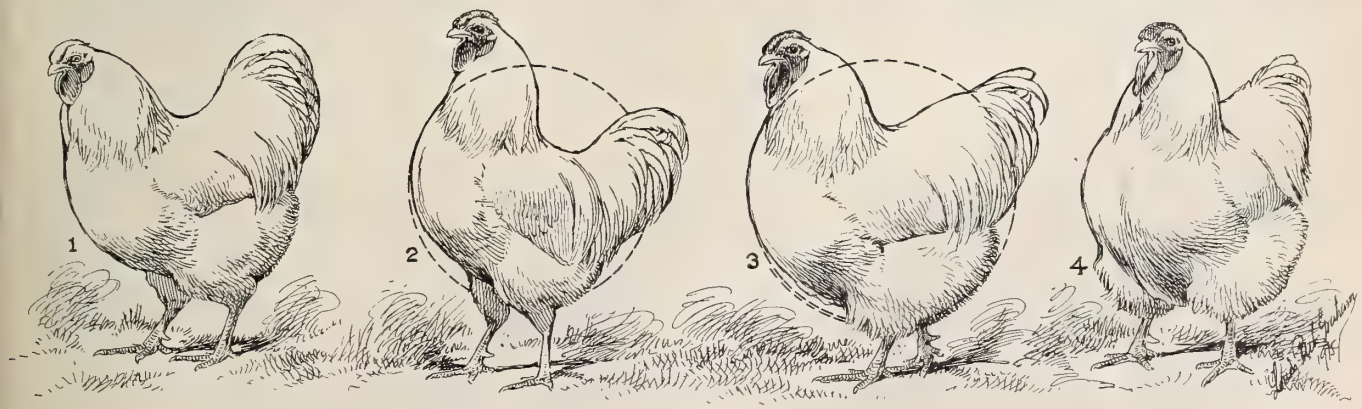
The Passing of the Old Circle Type, a Distinct Advantage From the Viewpoint of Beauty and Utility.

By Louis Paul Graham.

The current agitation over the utility qualities of the White Wyandotte and the emphasis placed by the rabid utility advocates on its lack of so called "Egg Type" is all wrong and where trap nests have been used, it has been clearly demonstrated that there is no one fixed type of layer. Nevertheless, this agitation has stirred up the White Wyandotte breeders much as a stick of dynamite breaks up the soil, allowing the roots of the fruit trees to grow deeper and more firmly established the old tree as well as improve its fruit. The White Wyandotte is more firmly established to-day than ever, and is certainly much improved, while the changes in the new 1915 standard are a distinct improvement in favor of the breed. Many trap nest and certified records have been produced proving that the White Wyandotte hen is a consistently heavy layer regardless of its type.

After all is said and done it is only the trap nest that actually gives exact records of the performances of any hen, either as a layer or as a breeder. All the so-called experts in the world, may maull and handle your hens and pretend to pick out your best layers, but they cannot tell you how many eggs any one of those hens so selected will actually lay in a year.

These trap nest records prove in this variety as in others that no one type of hen or size is a heavy layer. For instance I have before me, two photographs, one a large Cochin hen, short legged and heavy; her certified record is 213 eggs. The other photograph shows a small, short dumpy hen—her record is 219 eggs certified. This simply shows that no matter what their shape may be, they can and will be great egg layers if developed along these lines. Nevertheless, a composite picture of all the 200 eggers in two flocks which have been under my observation for five years, tallies with the present 1915 stand-



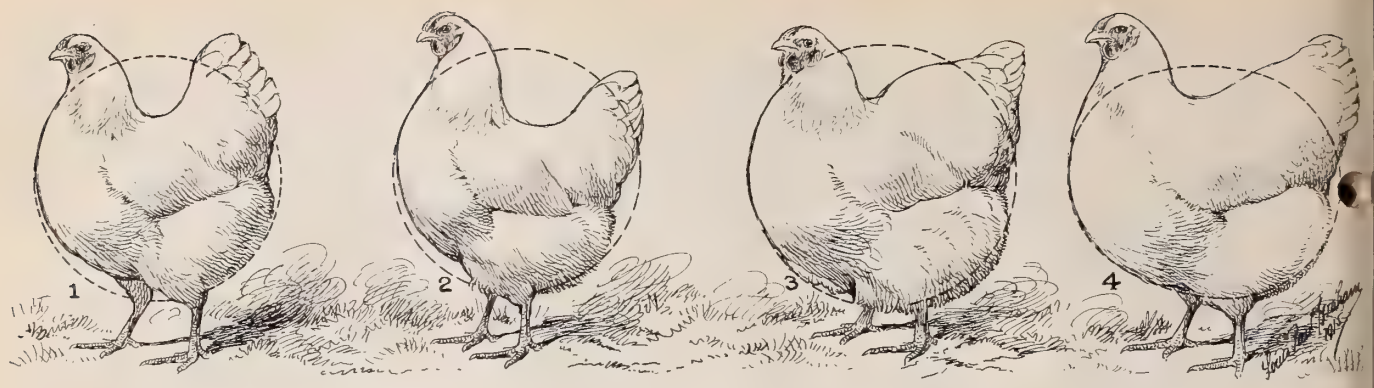
A COMPARISON OF OBSOLETE TYPES OF WYANDOTTE MALES.

No. 1 shows the "plow" type taken all around. This male is a good one, e head, tail, outline and length of leg, but the carriage is bad. He lacks symmetry and furnishes one of the very best reasons why "Symmetry" should be retained in the scale of points in the American standard of perfection. Many breeders blinded by the other good points of this specimen, honestly believe such a fowl to be worthy, but its one lacking feature is the most essential. "A Wyandotte is a symmetrical bird of curves.

No. 2 shows the other extreme the "Pouter" which like No. 1 possesses many standard points, but lacks the chief essential "Symmetry".

No. 3 The Cochin, a type which the 1915 standard relegates once and for all to the discard. While this fowl possesses good type and carriage, his feathering is too loose and fluffy in every section and the fluffy is so profuse as to hide the hocks. This type of male has been consistently the winner at Madison Square Garden for the last five years, but has no place there now. This type is usually accompanied by coarse and heavy comb and wattles, and a pinched and unfinished tail.

No. 4 shows a quartering view of No. 3 showing the wedge shaped or "hatchet"—not desirable and certainly not fulfilling the requirements of the standard for a full round deep breast. The illustrations also shows that the tail pinches.



OBSOLETE TYPE OF FEMALES COMPARED WITH THE 1915 TYPE.

No. 1 is the mate to the male in the other row. Too high in tail and pinched in head. No. 2 matches Male No. 2 in the other row. The "powter" type. No. 3 matches male No. 3 and shows the "cochiny" type which has won many high honors at our best shows.

Here you will see the broad round full cushion protruding over the points of the wings and the pinched tail stuck in the top of the ball of feathers. The fluffy is so long and profuse as to hide the hocks entirely.

All of these females fit the old idea, that a Wyandotte should be contained in a circle and round in every way. Contrast this with the 1915 oval type, a cleaner and tighter feathered, more graceful fowl, and yet a "bird of curves."

---

ard outline for a Wyandotte female.

In the main they are a close feathered, (not tight), smooth finished broad hen with good deep full breasts and medium length of the leg. I might add that many first prize winners have come from these same flocks. The concensus of opinion of all old established breeders of the variety, is that the new oval outline is a great improvement over the old circle type from the standpoint of beauty and tallies exactly with the best laying females.

The head should be short broad and deep. Skull slightly overhanging the eyes with low set, neat heart shaped comb and good red eyes. This type of comb (illustrated in cut No. 4 both male and female) adds just the finish to the fowl to make it in fact and in all sections, "a bird of curves". Many breeders talk of the "Rocker" comb especially in males. This type of comb, (also illustrated in cut No. 4 both male and female) cannot compare with the heart shaped comb and certainly leaves the impression that the fowl possessing it is rough around the head.

The neck should be full and rounding, arched, but not excessively so. Hackle flowing gracefully into the lines of the breast and back. The latter should be broad and full and saddle bro ad and flowing, smoothly over the points of the wings and also blending without angles into the coverts, which should with the sickles entirely cover the main tail feathers. The latter should be well spread as indicated in illustration No. 5 both in males and females. This under spread supports the cushion and saddle feathers and prevents the pinched and seamed appearance, noticeable in specimens not possessing well spread tails.

In the female the back and cushion should be broad and its surface meld gradually into the line of the surface of the wings, without bulging over them. The female tail to be well spread, should be "A" shaped. The two top feathers only touching and the others should be separated all the way down. A tail in which the first three or four top feathers on each side touch and from then on spread in an "A" shape cannot be considered well spread.

The wings on both males and females should be rounding and not flat. This feature is probably more often overlooked than any other section of the Wyandotte.

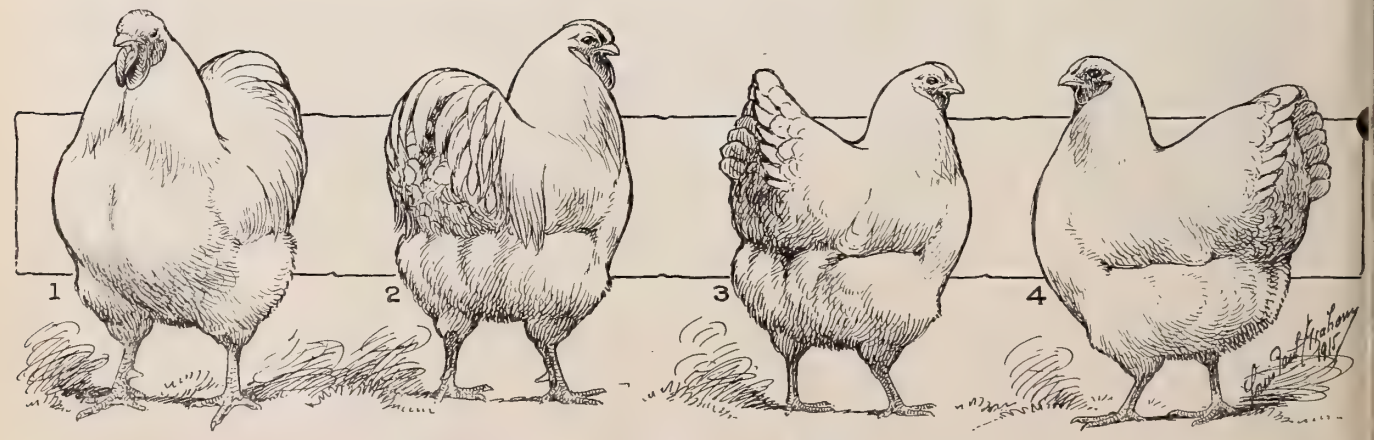
The breast on both sexes should be full, round and deep melding gradually into the body feathers and fluffy without a suspicion of a break or "cut under". The "hatchet" breast in both sexes should be studiously avoided. The best way is not to breed specimens possesing this defect. It is a pity that more stress is not laid on this "out" by the judges. A hatchet breasted fowl usually presents a very good profile in the breast section, but is woefully lacking when viewed from the front.

The body and fluff feathering should be smooth and held close, showing the hocks. The legs medium short, strong and set wide apart.

When you have all this, there is yet one more and the greatest esse ntial—balance—some call it symmetry Either word is good, if you understand what it means. The fowl should stand at all times in perfect balance. It should not be either a "plow" or a "pouter" and a preference to cut No. 2 will show what a well balanced specimen should be.

Standard illustrations show only side view (profiles) of our many breeds. Many breeders overlook the fact that the width or thickness of a fowl is an equally great essential. It denotes a well grown vigorous fowl and is characteristic of all great layers.

The White Wyandotte is rapidly assuming the position of shape, model for all other varieties, although there are many detached specimens of other varieties with equally as good shape.



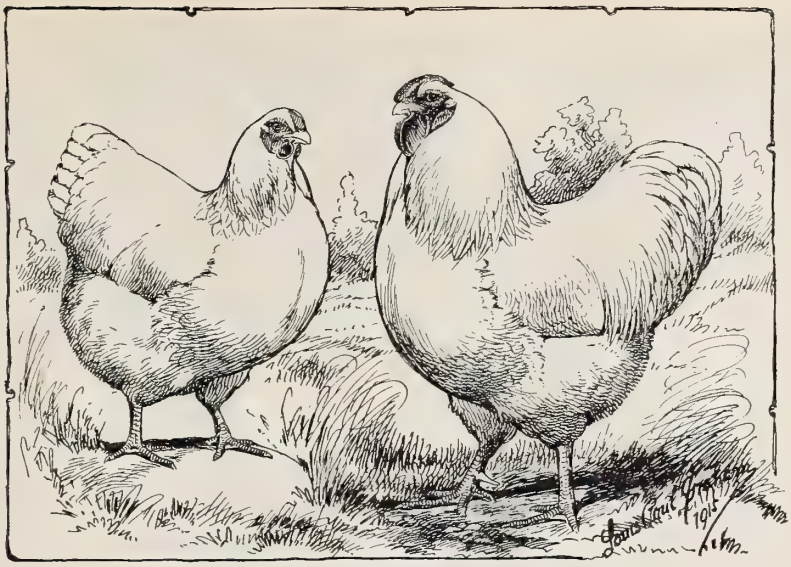
THE WYANDOTTES BALANCE—A WELL SPREAD TAIL.

No. 1 is front view of a male with the correct spread of tail. This makes a broad full back and saddle free from creases or bulges. No. 1 also shows a full round deep breast, not in the least inclined to "hatchet" shape nor "cut under."

No. 2 is the rear view of a properly spread tail and shows how the coverts and sickles should round out over it gracefully.

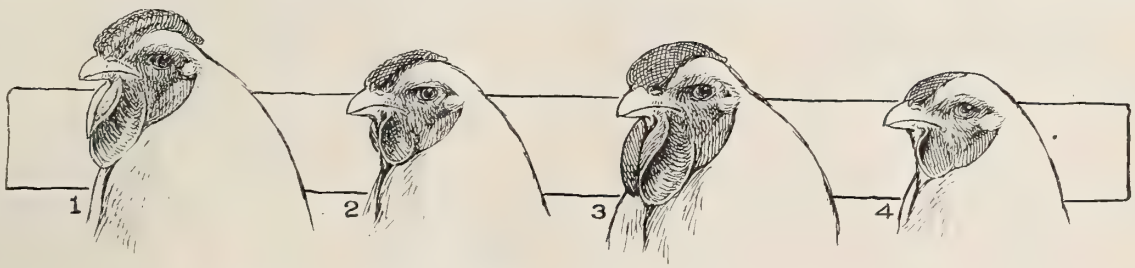
No. 3 is a female tail often mistaken for "well spread"—it is not. It is only half spread. The top is pinched.

No. 4 shows a well spread "A" shaped tail. Only the two top feathers touch.



The Ideal Wyandotte, Male and Female.

Buff Wyandottes on an average are possibly the closest competitors of the Whites in shape, followed by the Partridge, Silver Penciled, Columbian and Silvers. The latter are troubled with a most difficult color scheme, to produce and are probably the most difficult of all breeds, excepting the Barred Plymouth Rocks, to breed to a high state of perfection. Nevertheless, each year shows decided improvement both in color and shape due almost entirely to the demand by the judges who have officiated at the largest silver displays in the last five years, for shape as well as color.



A COMPARISON OF TYPES OF HEADS AND COMBS.

No. 1 is the much talked about "rocker" comb. It is invariably too rough on the top and stands too far away from the head. Males of this type of comb, breed females with heads like No. 2. It is curious that breeders, who favor male combs like No. 1 despise combs like No. 2 on the females. This forces two lines of breeding, one for males and one for females. The later to produce combs like No. 4, heart shaped, flat and snug, fitting. Such a comb is bred by males like No. 3. Here we have the preferable heart shaped, flat, snug fitting comb, that finishes off the Wyandottes head to conform with "the bird of curves."

SUMMER RANGE FOR THE POULTRY FLOCK

The Ideal Environment Means Contented Chicks and Excellent Growth.

By Prof H. R. Lewis.

All chicks when taken from the brooder house and placed on range are dependent upon two factors for a normal growth during the summer months. These factors are: First, inherited characteristics; and second, environmental conditions. Chicks when hatched from normal healthy parents which are matured and in good breeding condition will most surely make a better growth and attain greater size and producing ability at maturity than chicks hatched from weak breeding stock. Undesirable inherited characteristics are most pronounced in chicks which show loss of stamina, due to breeding from adult birds which lack this requisite. Small size in growing birds and slow growth are quite frequently caused by breeding from pullets rather than from yearling hens. It has been proven that the size of the chick at maturity is in direct proportion to its size and weight at hatching time. Hence, pullets' eggs being small are undesirable for hatching purposes. The rapid growth which the chick makes, its feathering, and its ability to forage are quite largely inherited characteristics which vary materially with different breeds. If these inherited characteristics are all that can be desired the problem of the poultryman during the summer is to surround the growing youngsters with an environment which will make ideal conditions for a continuous growth. With such conditions present the growing birds can develop to the fullest degree of their inherited characters.

Provide Plenty of Range.

The first consideration when planning the range should be to give the chicks plenty of room over which they can roam. Free range conditions should be provided and extensive rather than intensive methods should be followed. One should not attempt to grow young chicks on restricted areas which are bare of vegetation and shade, and expect a satisfactory growth. For this reason the farm offers wonderful opportunities for growing good sturdy poultry. The commercial poultrymen should lay out extensive areas for range when planning the scheme of his plant. The man who cannot grow each year a sufficient number of pullets to replace the older birds which must be disposed of and at the same time maintain size and vigor is doomed to failure.

Shade is an Important Factor.

On free range conditions shade is probably the most essential factor. Shade should be provided in abundance. The shade which is given off by a growing plant or tree

The shady hedge-row, no better place could be found for the growing pullets.

is to be preferred as it is cooler and more moist, due to moisture given off by the plant. Orchards make excellent places to rear chickens. Natural forest growth if not too dense can be utilized to advantage. Where permanent foliage is not available corn or sun flowers can be planted. There is probably no better place to rear poultry than in the corn field, the same area being utilized for two purposes with benefit to each. In the absence of natural shade artificial shelters of burlap or boards can be provided. There is no one thing which will check growth quicker than compelling the birds to remain during the heat of the day exposed to the burning rays of the sun.

Do Not Forget Green Food.

An abundance of green succulent material is another very necessary factor. Where free range conditions are available plenty of green food will usually be found. On limited areas where it is necessary to grow a large number of chicks closely confined, the plot used for this purpose can well be divided into two portions, by putting a fence through the middle, and placing the colony houses along this fence so that the chicks can be allowed to run on either plot. This arrangement will permit of rotating growing crops during the summer. Peas and oats can be sown early in the spring, and can be followed by buckwheat or soy beans. In the fall both areas can be seeded to vetch and crimson clover to serve as a winter cover crop and to furnish early greens for the following spring. Low moist bottom land makes an excellent range for such purposes providing young tender plant growth, even during the most dry periods of midsummer. Green feed not only provides the growing birds with digestible nutrients, but it also adds to the palatability and efficiency of the ration, for the birds relish it and makes a better growth when plenty is provided. An area covered with a green crop is always more sanitary and hence more conducive to health.

Crowding at Night is Injurious.

Another special consideration should be the type and kind of house which is provided for the range flock. Fresh air is the one most essential factor. The chicks use the colony house only during the night, and then simply for protection against their enemies and wet weather. Many are prone to make errors by crowding too many chicks in too small a house. An ideal summer growing house is about 6 x 8 feet with a shed roof, the front being about 6 feet high and the back about 4 feet high. The door can well be placed in the center of the front with a long narrow muslin opening on either side. The lower half of each end can be made in the form of a panel which hinges at the top and opens up. This will allow a free circulation of air through the house, keeping the birds

An out-door dry mash for the youngsters: see how they relish the delicious feed.

cool and comfortable on warm nights. Not only should the birds be given plenty of fresh air, but they should be given plenty of room. The house 6 x 8 feet, such as described will summer from 75 to 100 chicks at eight weeks of age, and after the male birds are separated at about ten weeks, the house will easily accommodate forty to fifty pullets throughout the balance of the season. The house should be elevated above the ground on posts or hollow tile, thus making them rat proof and not furnishing any hiding place for rats to congregate. Growing pullets are machines which must be developed to a certain pitch of efficiency so that they will consume a maximum amount of raw food material, and give in return a maximum number of eggs the next winter. Perfection in the development of this machine can only be attained by giving plenty of range, plenty of shade, plenty of green food, and by insuring fresh air conditions in the summer shelters.

Method of Feeding Important.

The final consideration should be to provide plenty of food material in the proper form to nourish and maintain growth. This is more or less a simple process because the chicks running over extensive range will have natural food material and are in a position to partially balance their own rations. The growing chick will always take sufficient exercise if given plenty of range room. The following is the feeding practice which has proven the most successful, and will, I believe, insure excellent growth under proper range conditions.

The Feeding Practice.

Large self-feeding hoppers which are rain-proof and portable should be located at frequent intervals about the range. In them should be kept a well balanced dry mash which can be supplemented by a grain ration. The following is the mash recommended:

Wheat bran	50 lbs.
Ground oats	10 lbs.
Gluten meal	10 lbs.
Corn meal	10 lbs.
Alfalfa (short cut)	10 lbs.
Meat scrap	5 lbs.
Dry ground bone	5 lbs.
Total	100 lbs.

This mash should be kept before the birds all the time. In additoin to this a cracked grain ration of equal parts of cracked corn and whole wheat should be fed, an amount being given such as the birds will clean up in about half an hour after feeding. This method is outlined so that the youngsters can balance their own rations, and it gives the weak ones a chance to eat mash when they are crowded from the grain by the stronger birds. The feeding of dry mash in self-feeding hoppers will tend to equalize the growth, and will produce a more uniform lot of birds than would be secured if cracked grains were fed alone. Plenty of fresh water should be provided and the water supply should never be allowed to become exhausted. Water is one of the most essential parts of the summer diet of all animals.

IF WE EXPECT EGGS NEXT WINTER LOOK CAREFULLY TO THE PROPER DEVELOPMENT OF THE BIRDS WHICH ARE TO PRODUCE THEM.

THE VALUE OF COLOR IN BREEDING

Each Color Presents a Problem. Difficult of Attainment, and Which Will Take Patient Study and Work to Perfect.

By Charles D. Cleveland.

In my article, printed in the first number of this Magazine, I endeavored to show that "shape makes the breed"; that without typical shape there is no breed, and that the Standard shape of each of the various breeds best suits the purpose for which that breed was originated.

The object, therefore, of each breeder in the beginning is to satisfy himself as to the proper form or shape of the fowl which he intends to breed and once having firmly established this form he must look to the color scheme of his variety.

It is always a subject of marvel to me how diversified is the taste of mankind and how ingenious its labors; for we have only to open the pages of the Standard of Perfection to see almost at a glance how numerous are the varieties of the various breeds (each differing from the other in its color pattern) and we know to-day that every one of these Standard bred fowls, and, indeed, others which have not yet become Standard, are bred by various persons all over the world. The man who has chosen the Partridge color as his favorite is so enthusiastic over this coloring that he sees comparatively little beauty in a solid colored specimen, whereas the breeders of the White, Black or Buff varieties insist that these are the only really beautiful chickens there are. Thus we find that no matter how diversified the tastes of breeders are there can always be found a variety which in color absolutely suits each individual taste.

So the new breeder having picked out, first, that shape or style which best suits his eye as to the general form of the chicken he wishes to breed, must choose a color which to his mind is best suited to that particular breed and to which he wishes to bend his energies in producing exhibition specimens; but before this fancier starts to finally make his choice let him remember that there is no one color that is easier or safer to breed than any other color.

I have often heard people say, "well, of course, John Smith had an easier task in producing that solid white bird than John Jones did in developing that parti-colored chicken over there". This is error, and all you have to do to prove it is to try. I must assure the gentle reader that if his main aim or object is to pick out a color which he believes will be the easiest to breed that he will find it a very difficult task. Each color presents a problem, difficult of attainment, and which will take patient study and work to perfect.

And this is entirely as it should be for were it really easy to breed any one of the various colors to anywhere near its real perfection there would be no fascination about the art of fancy poultry breeding, and most fowls would soon degenerate into that particular color which nature indicated was the easiest to breed. Therefore, in picking out that particular color which best suits his artistic sense the breeder need only look along the lines of his natural choice or preference and it is just as easy for him to breed show fowls of one color as it is any other color.

I say make your natural choice, take that particular color which pleases your eye and which you think will continue to please it and stick to that color. You will encounter difficulties, everything will not be easy but it is only those things which are difficult to attain which give real pleasure.

Now you will observe that in most all of the breeds you have a wide variety of choice in color; take for example the Wyandottes and Leghorns. Among the former we have the Silver Laced, Golden, Partridge, White, Black, Silver Penciled, Columbian, Blue, Buff, Pyle, and no doubt others will make their appearance. In Leghorns we have the White, Black, Buff, Silver, Columbian and others. Each has its particular fascination for a certain number of breeders, all are bred to great perfection, but real perfection has never been attained in any and probably never will.

One of the values, therefore, of color in breeding is to develop a very keen sense and appreciation on the part of the breeder as to just what color is Standard and therefore what exact tone or shade of color he will strive for in mating up his birds. This requires again closeness of observation, a good eye for color, and, particularly, a thorough appreciation as to how far short of the ideal the bird really is. If we assume that no perfection of coloring (any more than of type) has as yet been secured we must see clearly in what respects our fowls lack in color, and this I take it is the fundamental and primary thing which must be implanted in the mind or eye of the breeder at the start, vix: what color is he striving for and what is the ideal color he wishes to secure. The second step in the progression should be, how can the breeder retain in a majority of his flock the color of his best specmiens; and thirdly, how can he so perfect his blood lines that this color will reproduce itself year after year in the off-spring. These are the problems (really great problems) which confront every breeder to-day and have always been the points upon which days and nights of thought have been spent. Ordinarily speaking it is far

better, especially for a beginner, to make a final choice as to color and stick to that one color to the exclusion of all others. He will find it difficult enough to breed this color anywhere near a state of perfection without starting in on any other colors. So if one is breeding White Plymouth Rocks it is generally a dangerous thing to start in with any other color of Plymouth Rocks; and the man who changes yearly to suit what he thinks are the changes of the times, as far as the marketability of his birds go, will generally make a failure. It is a matter of difficulty to breed a truly white bird that will stay white under all conditions. It is no easy task to breed a bird with pure white plumage and a real yellow beak and yellow legs and these propositions, as stated before, will keep the ordinary man fully occupied and he would have but little time to give to the solution of other problems.

This is not intended to be in any way a treatise on color breeding but simply to very briefly point out some of the values of color in breeding, and even a casual observer will notice that there are two kinds of color, that is surface color and under color. Personally I believe that the object of the breeder is to produce a surface effect. What he is desirous of doing is to have his birds look right on the outside. He knows that the public, as a general proposition, is not interested in the color of his fowls except so far as it sees them in the yard or in the exhibition pen, and he also knows that the public has not had time to give, and never will have time to give, any real consideration to the under color. As I have stated in an article recently published in another Magazine I believe that practically no consideration should be given to under color in a show bird and in that article I expressed my reasons for this opinion; but from a breeding standpoint under color is of importance and the breeder will have to give careful consideration to it. You no doubt have read articles in the Poultry Press to the effect that there are several kinds of White. First the white feather which breaks out of rather a pink quill. This white feather is always white. Second, the white feather from a yellow skin chicken which comes out originally quite yellow and becomes white after the feather is entirely matured; so in examining the under color of these two kinds of white chickens one would naturally become very confused unless he knew that in the end both would be white. He would think upon an examination of the color of the yellow quill chicken that it never would amount to anything and if he would dig under the surface color of almost all the varieties of Standard fowls to-day he would find like problems. One man may produce a string of black birds with light under color and another may produce an equally black strain with dark under color and, therefore, no absolute strict rule can be laid down, but it is a safe proposition to say that in considering the breeding question one should remember that a dark color cannot ordinarily be produced by a light color. In other words an abundance of color pigment is necessary in the under color in order to hold surface color without fading.

In the Columbian Wyandotte for example a number of breeders differed wholly as to the exact shade of under color which it was desirable to describe in the Standard and which would produce the proper surface color and breed males that would be free from brassiness. One person asserted that it was only the birds with white under color that were worth breeding as they were the ones that would produce specimens with clean, clear surface color on the backs. Another stated that dark slate was the only proper color, because this produced the sharp black points that were desired, and that the males from birds with such under color did not show brass. The Revision Committee in this particular case finally adopted as under color described as Bluish Slate.

So you will find that both surface color and under color are the subjects of very careful thought and study by the breeders, and I say again that one may produce results one way and another another way, but no matter what under color you believe is the proper one for your particular variety you must proceed carefully in order to breed that particular under color which you have found produces the particular surface effect; and a flock should be chosen as uniform in under color as it is in surface color. Therefore, the study of color in breeding cannot be confined to surface color alone but must involve under color and the problem is therefore made doubly interesting. So also the color not only of the plumage but also of the skin must be carefully gone into. It will be found that all good breeders not only give their attention to the fancy points of their fowls but also to their utility qualities as well and the skin to my mind has a great deal to do with the utility qualities of the bird. We know that certain colors of the skin, which of course are shown in the leg and beak, are not as desirable for market purposes as other colors and are not as pleasing to the eye. Take for example a White Wyandotte with flesh colored legs; it is hard to sell and distasteful to the eye. Naturally the color of the skin is important from the breeding standpoint for in almost all cases it will be found that the proper color of the skin in each variety will have a tendency to produce the proper surface color, although exceptions to this rule will always be found.

In addition to the color of the surface and the color of the skin one must also consider the color of the eye which is a very important consideration. A Black Orpington with a pearl eye is a very sad sight and it is extraordinary how greatly this defect injures the whole appearance of the bird. In my case it is natural to look first at the head and eye of a chicken on first seeing it and if my first impressions are bad, it affects my whole opinion of the specimen; and it will also be found that not only will the wrong color of the eye injure the appearance but that also once used it will be a very hard thing to eradicate from a flock. Under no conditions should a bird be used in the breeding pens whose eyes are not of the right color.

But aside from these general observations as to color I believe that the most important thing in connection with color in breeding poultry is that it teaches patience.

Americans are pushing active people and desire to attain an end as quickly as possible. They are impatient at any delays and often over-step the mark by too hasty actions. Taking up the breeding of any one of the Standard varieties of fowl will necessarily do such persons a great deal of good. They will see after a very short time that, in poultry breeding at least, great strides cannot be made in a few minutes; that it takes real patience as well as perseverance to breed really good chickens and that there is always room for improvement. Many a man who starts out with a tremendous rush, lots of enthusiasm and a firm conviction that it will only take two or three years of breeding to perfect a certain veriety and then he can go to another is still patiently waiting to produce one specimen which he can truthfully say is anywhere near perfection. Now this is a very valuable thing, for patience is difficult to cultivate and it is one of the great virtues; and coupled with patience, as stated before, comes observation and we all know that this is one of the attributes that most persons are sadly in need of. How often have all of us overlooked a defect which a stranger has pointed out at a first glance?

This is a rambling "discourse" and in the near future I hope to talk with a little more detail in regard to the subjects herein treated, but suffice it to say at the present time that the poultry lover will find that among the values of color in breeding are: First—That to attain it teaches patience, perseverance and observation, and, Second—That there is involved in color breeding, not only the consideration of surface color but also under color and color of skin as well as color of eye, and that when all of these attractions are added together and a persevering effort made for improvement the fancier will be very closely tied down to his breeding yards.

SAFETY FIRST WITH CHICKS

Essential Considerations That May Make or Mar Success. Close Attention to Breeders Year Round.

By A. P. Marshall.

To produce poultry that will meet the present day high standard of quality requires business like attention to the essential things that tend to influence the proper growth and keep the flock in such condition as to keep production proportionally great throughout the whole year. That great success can be attained in small flocks on comparatively small space has been repeatedly demonstrated.

Of course there are a number of very essential considerations that may make or mar success, but we believe failure is due in more cases to neglect to avoid difficulties

than by lack of attention to furnish what may be generally termed everyday essentials.

The poultryman who raises birds to show wants to produce something that will outclass his rival's birds at the time of the show and the market poultryman wishes to produce more marketable eggs and poultry of prime quality to secure the top prices for his product. He who can produce his goods out of the regular season in as vigorous and thrifty condition as those produced during the natural season has gained an advantage that his rivals cannot make up on him.

In considering any aspect of poultry work we believe it wise to most carefully consider the season's work and plan in advance the possibilities with the available material and conditions and on a most conservative basis make preparations to carry out the plan by taking all the precautions that will avoid the difficulties frequently seen where poultry is kept.

Generally some objective is the incentive to any special effort during the season. It may be some special show at the end of the year or a group of shows. It may be to supply winners for customers or perhaps to furnish early broilers or soft roasters or to get eggs early at the season when prices are high and in consequence obtain a much bigger return. Whatever the results desired it is necessary to plan a sufficient time ahead to be sure of accomplishing what is wanted with some allowance for shrinkage or failure on the hoped for results.

If seasons were all identical one could plan to get the same results with the same treatment year after year, but conditions vary so that ordinarily the crop is materially affected by any big deviation from the regular season. The shortage of early chickens last fall was a marked example of that fact.

During the time of the season's hatching which is one of the big factors of the year's work the condition of the breeders must have the closest consideration. Here is involved the task of having the breeders in the pink of condition when the eggs are being secured. The best eggs for this purpose are secured from the hens when they are in the best active physical condition. If they are run down from too much showing or from forcing for egg production they will not become physically fit until well on in the season. We would consider it easier to hatch chicks in December if the breeders were in fine fit then and carry them through a month more of winter weather than to hatch in January from the same birds if they had lost their snap. The chicks with one month less of winter to go through with a weak start would be harder to handle than the sturdier chicks out of eggs laid when the hens were most physically fit. Many breeders claim that the very best birds that are raised each year are those hatched in May and early June. This is not hard to understand when we reflect how much depends on the condition of birds furnishing the reproductive eggs from which the chickens come. At no time of the year is a flock throughout in as good condition as is generally the case during April, May and June from birds at this time should come progeny as good as they can produce.

In an article of this kind it is hardly possible to go fully into the selection of birds for breeding to prevent disappointment in what is produced from them but it may not be too late to emphasize one or two points that may help to prevent failure for the remaining few weeks of the breeding period. Great pains should be taken to secure a male bird above all that has great vigor and that he keeps in good condition during the whole period of hatching. A good vigorous line bred bird will be likely to make his good features dominant in most of the chicks if reasonable care has been taken in selecting the females. Roughly their characteristics should offset any defects in the male. It is, however, perhaps well to remember that great extremes can not be expected to produce like in the chicks to a large extent. Similarity, therefore, will be found desirable providing the breeder is careful to avoid similarity of faults.

While the male is half the pen, the best male that could be secured could not possibly produce dependable stock unless the females were also of a high calibre. Good females with good males that will mate well with them make the best selection for building up a sturdy flock.

Having the right breeders it is necessary that their environment is all that could be desired to give all the natural comfort they need to keep them vigorous and capable of reproducing themselves in the largest possible way. By this we do not mean that lavish expense must be made for the birds. Very frequently the simple conditions are much more result-getting than extravagant conditions and require less production to make a profit.

The housing must be of a nature to provide great abundance of fresh air and sunlight at all times of the year. The temperature is not important but the birds must be protected from stormy winds and be well protected when on the roosts at night.

Having everything in order so that the birds will be in good condition to produce eggs that are capable of producing strong sturdy chicks it becomes necessary to plan ahead so as to have everything in readiness to give these chicks every opportunity of making the best growth. With the early hatches it is necessary to provide conditions that will as much as possible furnish those elements that make them thrive in the natural season. We believe it possible to mention these in a single sentence. They need sanitary quarters and fresh air of suitable temperature, pure clean water and conditions that make them scratch for the feed they get. All of these conditions can easily be supplied if a little thought is given the matter in advance of the actual need of the supplying of them. Ordinarily difficulty does not develop with the first brood or two, but as the chicks increase and space and equipment become used up and the work begins to crowd, the little fellows of the later hatches get less attention and either from having to be accommodated in coops that have already been used by earlier broods or placed on the same ground that has become soured or contaminated do not make the same growth as the older or earlier ones.

Perhaps there are no causes that have made failures with poultry like overcrowding and contamination of the soil. The last we believe to be the greatest usual factor that impoverishes successful plants, the former being contributary to the same result. By using the proper precautionary measures this tendency may be entirely prevented and a benefit secured to both the fowls and the soil from the treatment to prevent this contamination from constant use without any treatment. By frequently turning the soil and occasionally treating with air-slacked lime and sowing to a crop such as oats, rape or any other quick growing vegetation the trouble will be entirely prevented and no evidence of soil or stock deterioration exist from soil contamination.

Where chicks are being raised in large numbers we believe much trouble can be prevented if all specimens showing the least tendency to contagious disease are removed immediately from the others. How hard it seems to the inexperienced to kill off any sick stock for the sake of the others. We fully believe that fifty per cent of the losses in young stock could be prevented if those showing sickness were removed or killed the moment signs of illness appeared. It is better to kill one sick bird than to take the chance of losing dozens that might be most excellent specimens.

If all people would appreciate fully this fact the country would have a much larger poultry crop to record and more good breeding specimens for the next season's operations. After the hatching is over we find most people give their poultry less attention than perhaps at any other times of the year. This is a great mistake for there perhaps is no period of the year that is more trying to the birds than the hot of the summer months. Fresh water, shade and proper non-heating food are most essential then and above all, quarters that are sweet and clean, wide open to all the fresh air they can get. It is not reasonable to expect that the stock may be neglected for a couple of months and then extra care may be given with expectations of the best results. No, every care must be given all the year round or the greatest possibilities cannot be realized.

When the breeding season is over it is time to begin to think of the next season and do everything possible to prepare the breeders for the next year's work. They should be started on their moult early enough to have them entirely through before it is time for cold weather. If specially early chicks are desired the birds that are well moulted early and put in prime condition so that they can lay storng well fertilized eggs are the ones to use, for they only will be the ones that can produce strong embryos from which to get vigorous chicks in the late winter or early spring. By giving the closest attention to this a whole season's work can be much improved.

This is a most excellent time to observe which are the most vigorous for where there is any likelihood of weakness it will generally show itself when the strain of moulting is on. At this time if those having any difficulty or showing weakness are discarded the product for the next season should be considerably improved.

Let 1915 prove to be one of well-thought-out plans carried to completion so as to get the maximum possible results with the knowledge and equipment available. Only in this way shall larger results be possible.

ECONOMY THE BEST---QUALITY NOT QUANTITY

Start Right With the Best Quality Stock. Correct Mistakes Made, and be on the Winning Side.

By J. Courtney Punderford.

Too late.—This is realized by hundreds of Poultrymen each year. My own experience was most unfortunate some fourteen years ago when I started with poultry. I knew little or nothing concerning what I should or should not do, buy or not buy, and, of course, made the fatal mistake of buying cheap stock, simply because it was cheap and I could secure quantity, but not quality, as I soon found out. What was the consequence? The following year I had to sell practically my entire stock, knowing only too well that I had secured just what I paid for; namely, cheap stock which would not lay or reproduce. I had to start all over again, losing a year or more and the initial cost of my birds. I then purchased new stock, and quality ruled this time and not quantity. I was started on the right road at last. Now, many experience this same misfortune, and I am writing this article with the hope that it will save one or more prospective Poultrymen money and time.

It holds good in every branch of the business. Cheap hatching eggs—what do they yield? Low fertility, weak chicks, loss of time, and ultimate failure.

Low-priced incubators.—In most cases the results are poor hatches, puny youngsters, again, loss of time, and nothing to show for the Incubating season when Fall arrives.

Cheap brooders.—Making it practically impossible to regulate the temperature. under-heating, or over-heating the chicks, which means White Diarrhoea, a heavy death rate, and runts when matured.

Cheap food.—Nothing is too good for the growing chick, and price should not be considered if quality is sought. Cheap grains or mashes mean poor grains or mashes, especially at the present writing, for nobody can sell sound, pure grains and hold the price low if they wish to make a living. Cheap feeds are bound to have a filler, and should you be unlucky enough to purchase some with musty grains in the make-up, you will have no end of trouble, especially with your youngsters. Bowel trouble and Sour Crops will soon appear, and if not checked at once will soon take off the greater part of your stock.

Cheap houses—which mean poorly constructed houses. Here again we have trouble, for the poorly constructed houses cannot withstand the severe winters. They are cold, draughty and damp. This leads to Roup and all the known ills which overtake poorly housed stock.

In fact, I can go on and on recounting facts wherever one tries to economize by buying cheap articles. Nine times out of ten you will be on the losing side and failure is the final count.

Let us take the opposite side. Good eggs mean good hatches, when incubated in a good incubator. Strong, healthy, matured stock is, in a great measure, due to proper brooding, and this can only be accomplished by using the best Brooding device. Again, the best matured stock is the result of pure, wholesome grain and mashes. Profit-paying layers and breeders are only profit-paying when housed under the proper conditions, the houses being tight, well ventilated, sanitary and dry.

After reading this article I am sure you will agree with me that the facts I have set forth are sound, and, having been through the mill myself and also having had a chance to closely observe the methods used on numerous farms, I find that many have had the same sad experience I had, and, having corrected their mistakes, are now doing well. Again, I find others who will not be shown the error of their ways, and are running down hill, to certain ruin.

Take heed and be on the winning side. It is not difficult to remember the old adage, "The best is not too good".

RAISING POULTRY AS A SIDE - LINE

The Raising ef Poultry Offers Many Wholesome, Enjoyable Hours of Out - Door Development.

By H. V. Tormohlen.

To the suburbanite and small town dweller the raising of poultry offers many wholesome enjoyable hours of outdoor employment during the year if indulged in merely as a side line if fowls are kept only for the purpose of furnishing the table with choice spring fries and broilers and eggs the entire year.

The advantages to the business man in raising poultry on the few feet of back lot or on the half acre at the suburban home are many. There is no employment that offers to the person who is closely confined by office work a greater amount of light physical exercise, or a more pleasant means of recreation than the culture of thoroughbred poultry in a limited way.

To the person who can interest himself in this industry, and who can devote spare time to it with the idea of gaining not only physical exercise, but of acquiring a knowledge of the business that will enable him to excel as a fancier, there is a fascination about the work that increases as experience is gained. The tilling of the soil for the garden of flowers or vegetables is an enjoyable recreation but the garden plot lasts only for a few weeks at the most and during that time very strenuous work it is indeed, while the rest of the year—at the very time when indoor workers need fresh air most—the garden cultivates habits of cozy fire-side physical idleness. Our friends, the chickens, require attention each and every day of the year and so we are forced to get out and stir up the straw litter in the scratching shed with the thermometer about the zero mark on those cold winter mornings the same as in July. Thus the habit of getting out and exercising in the cold fresh morning air is formed and—good habits if formed in town invariably insures health and happiness.

It is said that a well balanced variety of tasks makes one task a recreation for the other and to come away from the city and office with its cares and intense mental exertion and hurry out to the poultry quarters and attend to a nice flock of busy but care free hens makes life take on a different aspect and the close association with nature relieves the pessimistic and bewildered mind in a very short time. Poultry raising as an occupation might grow monotonous in a very short time to the office man with a brain trained and accustomed to grasp big problems and solve them but as a diversion from the daily grind and routine of life, poultry raising forms an excellent safety valve for the strenuous brain worker.

Starting in to raise poultry may be done on a very small scale or on a more elaborate scale if much experience in the rearing of poultry has previously been acquired. Starting with a couple of old "biddies" and two dozen chicks is much more satisfactory even to those who have had experience for be it remembered that in this day and age of the world chickens cannot be raised like we used to see our grandmothers back on the farm raise them and even if we think we know a great deal about it because of being reared on the farm or spending the summers at grandmother's we will encounter difficulties in raising chicks on back lots that we never heard of before.

The different breeds of thoroughbred poultry to-day are so far superior to mongrel stock for the different purposes for which they were developed that it is nothing short of folly to raise anything but thoroughbred stock. Your individual tastes will have much to do in selecting a breed but do not be unduly influenced by the popular opinions of the day. To-morrow the fad will be over and you will be wanting to change breeds for the new arrival in popular favor which is declared to be the "greatest layer and best broiler ever".

Eggs are practically indispensible in the modern kitchen and they are used every day in the week while a

dressed fowl is used probably once a week. Nice fresh eggs seem to be the hardest to get on the market the year round while seldom, if ever, is a nice carcass hard to procure. For this reason I would deem it the better plan to keep fowls primarily for eggs and secondarily for meat. Then again where the young birds must be continually confined their carcasses, when ready to fry, will have cost more for feed than if purchased on the market as the broiler man on the farm can raise and market fowls much cheaper on his acres than the city man can on the back lot where he must purchase every morsel of feed.

But eggs can be produced with about one half the market price of eggs from a good laying strain of hens when confined in very limited city quarters the year through.

There is no best breed or variety. But there are better strains of layers among the different varieties. One Plymouth Rock will lay better than another because it has come from a long line of ancestors which have been bred for egg production.

Senator Mooney of Mississippi recently asked an old colored man what breed of chickens he considered the best and he replied, "Marsa Mooney, all breeds of chickens has de merits, for instance the white ones am de easiest to find after dark and the black ones am de easiest to hide after you once gits em".

I chose the Brown Leghorns because I had known from a small boy up that they were noted layers of white eggs. I had seen some flocks of white birds in town and they always presented a dirty appearance. These were the reasons why I decided on the Brown Leghorns but your way of looking at it might lead you to an entirely different conclusion and you might decide on the Minorcas, the Houdans, the Anconas, or the Rhode Island Reds. Then again as a student of colors as found in nature I found the Brown Leghorns presented the deepest mysteries and difficulties in combining the shades of any of the Gallinaceous tribes. I found it very hard to produce show worthy specimens at first and for several seasons my efforts proved a failure in that at least I was unable to produce as good specimens as the parent stock itself. But after delving in nature's laws I finally worked out the principals as to how to mate to make colors reproduce themselves. Indeed, it was such a fascinating study that every leaf and flower and painting that came under my eye was observed closely for some hidden combination or principal in color combinations.

To start in the spring in raising fowls it would be desirable to purchase baby chicks or eggs from some reliable breeder and place them under a setting hen which you have bargained for from some neighbor who keeps mongrel hens or some farmer friend. Setting hens should be purchased for not over $1.00 apiece and they can be sold for 75 cents when the chicks are raised. The chicks can be kept in a small coop until nearly grown and in the fall a poultry house can be built.

The one shown in the illustration is one built of hollow red tile on a suburban five acre tract and is of a very permanent nature. The hollow tile form a dead air space and this house is very comfortable for fowls in very cold weather. Two windows covered with canvas furnish an abundance of fresh air while the two glass windows in the sliding doors admit plenty of light when the doors are closed on very cold or stormy days. It might be added that there is hardly a dozen days in the year that the doors are not drawn back admitting a flood of sunshine and light on the scratching floor which is covered with eight or ten inches of straw into which small grains or mixed scratching feed is scattered after the morning feed of warm mash and again at noon keeping the fowls busy and content—and laying.

A house planned similarly may be built of lumber or cement blocks. From the ground and profile the arrangement of the roosts and nest may easily be seen. Two roosts accommodate all the fowls and a dropping board directly under the roosts keeps the floor free of the droppings and saves floor space. The nests are placed immediately under the dropping board and the hens enter the nests from the back side. A trap door in front makes the removal of the eggs quick work. A frame on which is tacked muslin and hinged to the roof drops down in front of the fowls at night and keeps them warm in the small roosting compartment and yet admits plenty of fresh air. The floor is constructed of cement and covered with two or three inches of sand which is removed and new added each summer. A room is partitioned off at one end in which the feed boxes and barrels are kept and in which the setting hens are placed where they incubate their brood unmolested by the rest of the flock. The house may be built any length desired but no pen should be more than ten feet wide as fowls do better if kept in small lots and if the young pullets are kept from the old hens until late in the spring.

Above is shown the 1st prize Barred Plymouth Rock pullet at the club show, Pittsburgh, Pa, January, 1915. She is a beautiful example of all that is desirable in a Barred Rock female. Her contrast of color, narrowness of barring, with consistency, are as good as we have ever seen in a Barred Plymouth Rock. Mr. R. J. Walden, Middleburg, Md. has bred many rare birds and has placed his Maryland Strain to the front in popularity. H. P. S.

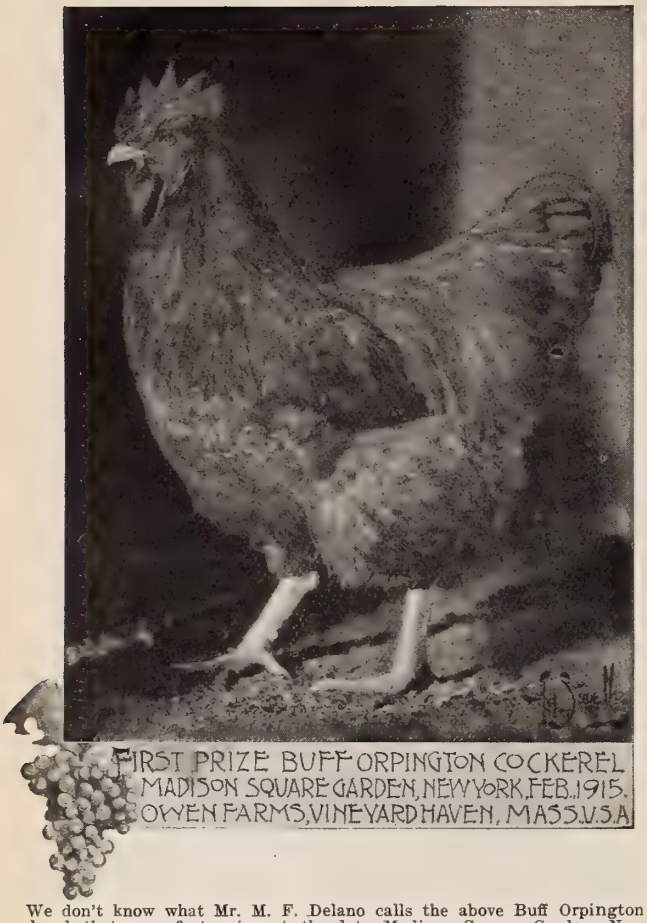
REPORT OF EGG LAYING CONTEST

Some Interesting Experiments at the Mountain Grove Station. " Swat the Rooster " and Improve the Quality of Summer Eggs. Entries for the Next Contest are Coming In.

Owing to the great interest manifested in these contests, and because of the good they are doing and the interest they are creating, the Missouri State Poultry Board has decided to hold another Missouri National Egg Laying Contest to begin November first, 1915. We hope to have entries from all parts of Missouri, every state in the Union, and every foreign country. Many inquiries and entries are now coming in. An attractive set of rules and regulations governing the next contest is just off the press and will be mailed in a few days. Those desiring to enter pens should write for rules at once.

One very interesting experiment which is being tried in connection with egg production, is with different feeds. One pen of 20 hens is fed a normal or balanced ration, 1:4.5, the same as is fed in the contest. Another pen is fed a wide ration, 1:15.8, which is lacking in protein which is the principal part of the albumen. Another pen is fed a narrow ration, 1:2.7, which is lacking in fat which produced the yolks. Another pen is fed a ration lacking minerals, which produce the shell.

The first pen produced 896 eggs in Jan. Feb. and March
" second " " 267 " " " " " " "
" third " " 160 " " " " " " "
" fourth " " 105 " " " " " " "



We don't know what Mr. M. F. Delano calls the above Buff Orpington cockerel that won first prize at the late Madison Square Garden, New York Show, but we do know him a most worthy winner, sound in shape and color and of the evenest quality and soundness in every section that has ever brought to the Owen line victory at any show. This same quality is a line feature with breeding value established firmly in this line. At this time note Mr. Delano's announcement of his special reduced prices on eggs for hatching and stock for sale. H. P. S.

It will be noted that the balanced ration is by far the best, and that the absence of minerals is the poorest.

The principal lesson learned from this test is that the minerals are very important in the balancing of a feed ration. Many flocks are unprofitable because of a lack of shell forming material. Ground oyster shell, crushed limestone rock, or even chats from mines are good. These minerals are the cheapest part of the feed ration, yet are very important. Therefore, they should not be overlooked.

It is also interesting to note that the pen which did not have shell forming material did not produce soft shelled eggs, which indicates that soft shelled eggs are produced from some other cause than the lack of shell forming material.

"Swat the Rooster" on May 15th. The summer season is coming on and with it the question of the quality of summer eggs. All agree that the "Swat the Rooster" campaigns conducted in Missouri have done more than any other one thing to improve the quality of summer eggs. "Swat the Rooster" and sell infertile eggs is the right thing to do. The producer gets more for his eggs, the dealer can afford to handle them with less per cent profit, and the consumer will have better eggs, which will increase the demand.

All great campaigns to benefit humanity have some negative results because of some people taking advantage of the situation for selfish motives. One of the undesirable effects is that both producer and dealer think because an egg is infertile that it will keep indefinitely under all conditions, and therefore treat it that way. The infertile eggs should be handled just as carefully and marketed just as often as the fertile eggs. Then the consumer gets better eggs.

Infertile eggs from incubators should never be placed on the market but boiled and fed to the baby chicks. It's the cheapest and best feed you can give them for the first week.

Valuable males which have proven themselves to be good breeders should be placed in a pen with eight or ten females and kept for next year's breeding. Flocks of hens without males lay more and better eggs, are quiter and easier to handle, and eat less feed. Therefore, kill, sell, or pen all male birds on May 15th.

At the time the males are marketed is a very good time to market the over-fat hens. They will not be profitable layers during the summer and the young stock will have more room.

The contests are both doing good work. The Missouri Contest composed of fifty pens of five hens each, laid 5,140 eggs in March, which is an average of 20½ eggs for every hen, both good and bad.

Of the twenty-one pens and hens mentioned in the honored list (16 pens and 5 hens) 7 pens and 2 hens are Plymouth Rocks. The Plymouth Rock breed is certainly holding its own in this Contest.

Pen 37, R. C. Reds, won the cup for March, by laying 123 eggs.

The five highest hens in the Missouri Contest for five months are as follows:

Hen	4	Pen	4—S. C. White Leghorn	119 eggs
"	3	"	14—S. C. White Leghorn	96 "
"	4	"	38—Whit Plymouth Rock	93 "
"	1	"	40—Barred Plymouth Rock	90 "
"	4	"	49—Black Langshan	88 "

The ten highest pens for Five Months are as follows:

Pen	34 Barred Plymouth Rocks	386 Eggs
"	40 Barred Plymouth Rocks	383 "
"	38 White Plymouth Rocks	379 "
"	4 S. C. White Leghorns	372 "
"	26 Buff Wyandottes	368 "
"	47 Buff Orpingtons	360 "
"	14 S. C. White Leghorns	352 "
"	24 White Wyandottes	351 "
"	36 Buff Plymouth Rocks	350 "
"	2 S. C. White Leghorns	336 "

The five highest pens for March are as follows:

Pe n	37 R. C. Reds	123 Eggs
"	38 White Plymouth Rocks	119 "
"	28 White Wyandottes	118 "
"	34 Barred Plymouth Rocks	117 "
"	40 Barred Plymouth Rocks	117 "

The National Contest is composed of 79 pens of five hens each which were sent from many of the States in the United States as well as foreign countries.

The youngest contestant is Master Mark E. Johnson, of Atlanta, Ga., who is seven years old. He owns the pen of Black Leghorns. It is the only pen of Black Leghorns we have ever had in the contests here, and they are making a very good record.

Pen 70, White Plymouth Rocks, from Kentucky, won the cup for March by laying 127 eggs.

The ten highest pens for five months are as follows:

Pen	21 S. C. White Leghorns, England	365 Eggs
"	75 R. I. Whites, Illinois	355 "
"	43 White Orpingtons, Wisconsin	346 "
"	1 S. C. White Leghorns, Pennsylvania..	341 "
"	3 S. C. White Leghorns, Pennsylvania..	318 "
"	19 S. C. White Leghorns, England	308 "
"	61 Silver Wyandottes, Iowa	301 "
"	74 S. C. Reds, Pennsylvania	298 "
"	52 Buff Orpingtons, Pennsylvania	297 "
"	57 White Wyandottes, England	297 "

The five highest pens for March are as follows:

Pen	70 White Plymouth Rocks, Kentucky ...	127 Eggs
"	29 Black Leghorns, Georgia	117 "
"	75 Rhode Island Whites, Illinois	117 "
"	76 Rhode Island Whites, New Jersey	117 "
"	5 S. C. White Leghorns, Illinois	115 "

The five highest hens for five months are as follows:

Pen	43	Hen	277 White Orpington, Wis.	110 Eggs
"	67	"	412 Barred Plymouth Rock, Ill. ..	110 "
"	71	"	438 White Plymouth Rock. Texas..	94 "
"	75	"	473 Rhode Island White, Ill.	94 "
"	21	"	129 S. C. White Leghorn, Eng. ...	91 "

Rancocas Poultry Farms, Browns Mills, N. J. covered themselves with glory by their wonderful record in the S. C. White Leghorn classes this season at the Madison Square Garden Show. Their record of fourth prize on Hen and 1 st prize pen is deserving of much honor and consideration on account of the keen competition to be found there each year. The above group represent the first prize Pen which caught quite a stir and brought forth showers of congratulation to their successful owners. They were indeed a beautiful lot, well matched in size, form, possessing the elegance and finish required to win in this strong company. Rancocas Poultry Farm has been producing good Leghorns for years and raised them by the thousands to supply their trade throughout the country.—A. O. Schilling.

In the above artist Schilling shows well deserved enthusiasm for the beautiful pen he has so faithfully portrayed. We wish to join him in this. The Rancocas Farms have been boosters at all times for better poultry. The breeding success made by these farms has been one of note both in Leghorns and in their line of White Plymouth Rocks. They are commendable lines and their influence has been far reaching and of general advantage to the entire industry. H. P. S.

When writing Advertisers always mention "Everybody's"

OUR GUARANTEE.

We guarantee every subscriber against loss due to fraudulent misrepresentation in any display advertisement appearing in Everybody's Poultry Magazine providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in Everybody's Poultry Magazine and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it comes.

SUBSCRIPTION PRICE.

Fifty cents the year. Three years for $1. in U. S. and Mexico, Canada 25 cents per year extra. Foreign countries 50 cents extra.

A Renewal Blank will be inserted when sub. expires.

ADVERTISING RATES ON APPLICATION.
SAMPLE COPIES sent free to all interested Subscription Agents wanted.

Manuscript and copy for change of advertisement must be in our hands promptly by the 10th of the Month preceeding date of issue. New Business can be accepted to the 20th but no special position can be assurred.

It is most gratifying to us, to note the reception accorded to "Everybodys" by Editors, Breeders, Fanciers and the public in general. Without exception the verdict is that—"Everybodys" was better and grander than they expected. Hundreds of telegrams and letters have been received, commenting most highly our April issue, with assurances of universal support and good-will. This is a condition that is most pleasing to say the least.

We fully appreciate this and thank all, and every branch of the industry for the encouragement given, we will work and hope to merit all. It is our one desire to serve all interests in the best possible manner, to help to conserve them, and to aid in making the combined interests greater and of more general value. Your interests are our's, just as truly as our's are your's, this with an ample field of unbounded value, combined with greater opportunities, than ever before offered, makes the future seem bright indeed.

The real greatness of the future, is dependable to a very large extent upon the present successful work. If we will but all look ahead, and guide ourselves to some extent as to the future requirements, we will then not only reap greater benefits, but will also help to accomplish real duties imposed upon us. The great future looks to us NOW do the best there is in our power, it holds us all to our share of the successful work, to make this age notable in poultry history. Let us not fail in this, let us do our best, now and ever, and always bear in mind, that the general success, promises best for personal success also.

We thank one and all for their well-wishes and gladly return the compliment of wishing to every poultry breeder and every poultry interest unlimited success that can be had by "Fair play with all".

In the work before us we will require every consideration that can be given, to have it of far-reaching effect, we do not ask for sympathy, but we do ask the general aid of all the poultry interests, according to our worth. Our work will ever be for the "Good of the Cause" and to which you can contribute to the extent of your personal best interests. "Everybodys" will always give you One Hundred cents worth of service, for every Dollar that you spend with it for subscriptions, or for advertising. With the aid of all our good friends, we are going to make "Everybodys" popular, and so good and great, that it will in time become (we hope) a household necessity.

We can refer to our articles and reading matter with special pride. No better poultry literature has ever been written, than that published so far. This standard will be maintained at any cost, for our first duty is to the subscriber, now and always, and we are going to have a hundred thousand more of them ere long. "Everybody" is BOOSTING.

Our advertisers are just as enthusiastic over "Everybodys" as we are. We can recommend them, and we do also recommend them. By Fall we will have a completed family of these that will be interesting to note, a family of class, who will assure to all the best there is in poultry. Your earnest support with that of your friends is respectfully solicited, NOW.

That the Express Companies are responsible for the safe delivery of stock, and are also liable for their full value has been proven time and time again, but never before quite as fully, or quite so emphatically, as in a case recently decided in New York City where a verdict of $2,500 with costs of $597.00 was rendered against the United Express Company, for the loss of twenty (20) hens. The jury giving the owner and shipper the full amount sued for.

This case has been in litigation since January, 1911, and was fiercely contested, with the final verdict of interest to poultrymen. Yearly there are numerous cases, where through negligence and carelessness valuable stock is lost, and many cases of delays from misdirected shipping, etc., where stock is held up and its breeding value impaired, if not fully ruined.

Poultrymen as shippers of Live Stock, who always pay an extra rate, have cause to expect prompt and safe service combined with the best of care. The agents are not always fully to blame, but it is those higher up, who shoulder their agents with more work than is possible for man to do, and this within limited time.

The breeder who has suffered actual loss and settles his case out of court, for any amount less than his loss really is, is foolish indeed. The companies all have their bluffers who will see you, pay no attention to them. If you have a case, insist upon having full value, it is your due, and you can get it.

We have two requests before us at this time from our Subscribers asking—"Which is the Best Breed". This like some others, is a common question to ask, as well as one of more or less general interest to many. Our version of it is, that, there is no best breed, most of the Standard breeds are good, several are very good, and all of them with proper food, care and handling, will hand in substantial results to the owners and breeders.

The Standard varieties bred to near Standard shape qualifications are dependable for results. Experts in the several varieties have worked for many years to have their Standard form, qualify consistently with their natural requirements and breed characteristics, so that now we may fully depend upon it, that, their Standard shape, is identical with their natural form qualities, at which they are at their best, at all times.

Breed a Standard bred variety, the higher in quality, the greater the results, and the better your chance for success. Follow your own inclinations as to breed and variety, for the one that suits you best, with color and style of make-up that appeals strongest to you, is one bound to give you the best results.

Results depend largely upon your own interest in the stock, to have your personal interest in your work, is absolutely necessary at all times, this interest will largely depend upon being well pleased, and the variety appealing strongly to you.

The Asiatic varieties are dependable. The Light Brahmas and Black Langshans, are better to-day and far more popular, than ever before in their long history. Size and winter laying qualities are theirs.

The American varieties are probably the most popular of all. The Rocks, Wyandottes, Reds, Dominiques and Black Javas form a large class of twenty varieties, with all possible colors to select from. They are of good medium size, reliable layers, quick to grow and are very hardy.

In the Mediterranean class there are the Leghorns, Minorcas, Spanish, Andalusians and Anconas. All these are noted for their laying qualities and as producers of fine white-shelled eggs. Here again there is size, shapes and colors to please the most fastidious. No mistake can be made in selecting any of these.

The English class also contains some rare good varieties in the Orpingtons, Dark Cornish, Sussex, Dorkings, etc. Excepting the Dark Cornsih (which have yellow legs and skin) all these varieties have white legs and skin, with special qualities for quick maturing, fine grade flesh with substantial laying qualities.

Then there are the Houdans, surely one of the best of varieties. The Faverolles, Hamburgs, Polish, Campines, which also are very popular and are making good. All are desirable and worthy of every consideration. Consult your own desires, and let in this case your own personal likes designate the variety. That will be the "One Best Breed for you".

Both loss and waste are evils, at any time or place, with usually but the one cause—"Carelessness" for either or both. The yearly loss sustained by poultrymen throughout this country, amounts to millions upon millions of Dollars each year, which can well be considered a near calamity. It is estimated that in the State of Illinois alone, the poultry breeders loss last year was $5,500,000 through the improper selecting, shiping and handling of eggs, by dirt, poor packing and by constant slip-shod methods throughout.

We believe that anything worth doing at all, is worth doing well. It is clearly up to every poultryman to get all that is coming to either him or her. The little things, no matter how small, grow into amounts that are staggering, constant vigilance is required with a system made to be followed. Carelessness never brought anybody anything, but failure, if the breederes will out look to the small things, the big ones are apt to take pretty good care of themselves.

There is no reasonable reason for failure in the poultry business as we see it, the stock under ordinary conditions is always worth its keep in individual production, while with proper care a profit is an assured fact. In marketing either

eggs or carcases, be positive they are right and of No. 1 quality, select the best markets and keep a hand on all conditions that effect your sales. Cater to the best, and be very sure at all times to have Yours the Best.

We have a most kindly feeling for the Back-yard Poultryman, who lives in the town or city and whose business is so exacting, that his time and space for poultry are both limited. Usually we find in this kind of breeder, the ideal fancier with natural desires and love for poultry, birds, dogs and live stock of any kind. He works and plods, overcoming all obstacles and keeping a few choice hens whose records and pedigree he knows for ages past.

We have met with thousands of these in years past, and have found that all have hopes of "some day" breeding more extensively. These are the kind of breeders sure to make a success, their beginning is in a small way, which is in the right way, they observe and learn conditions and requirements, when common mistakes won't break them. Most of them make good from the start, improving and increasing as time passes, until finally we find them settled on a few acres in the suburbs, or on a farm, with a built up reputation and a quality of bred-up stock worth while, with final success assured them.

Poultry offers success and opportunity for one and all alike. It offers inducements that all those who can should study and know. It will make better men and women out of your boys and girls, by having something at home to attract them, and to give them some special care. Keep poultry, if only a few, they will more than pay their keep and will prove a source of special enjoyment for you.

Let us have more Back-yard Poultrymen.

The Poultryman's May work if rightly done is very exacting, it is one of his busy months, with plenty to do both early and late. The Hatching season is on, and at its height. Incubators, setting hens and brooders require prompt and the best of care, do not neglect anything as important as these duties. The chicks should also have special care at this time, for after hatching, comes the question of proper rearing and growing. Do not underestimate the value of this, for it really means, every time fifty per cent of their value when matured. It stands for stronger vitality, insuring quicker growth at the least possible cost. It also means better layers, greater fertility and with all a greater success and an abundance of real unadulterated satisfaction in the end.

Clean out, and clean up, both the hen houses and the yards, turn over the soil where the grass don't grow. Arrange now for shade by planting corn near your buildings, or Sun Flowers in the yards, either will answer the purpose well and will grow food. Sun Flower seeds are a particularly valuable food for growing chicks, and to feed to intended exhibition birds. See that the nests are properly cleaned, soiled eggs will hardly bring a second price, while washing don't help them any, if they are intended for hatching eggs. See that the stock has plenty of fresh clean water, supplied from clean founts, set in a cool and shady place, also the grit, charcoal and oyster shell are within reach.

Keep after both lice and mites with a determination, dust the broody hens well before, and often while setting, also the chicks as soon as hatched. Watch out for head lice on the babies, we grease them all, on their heads and under the wings with lard, thinned with but a very few drops of kerosene oil. Setting hens should have a dust-bath for daily use while setting.

On every poultry plant there should be a time and place for everything. System is the word, handle it as a business and the gain will be yours.

THE CHICKEN BUSINESS.

The man who imagines that he can go into the chicken business with a $2. setting of eggs, a sixty-five cent setting hen and a fifty-cent dry-goods-box and then spend his time at the corner grocery spending his interest, is a Goose. Many of our greatest breeders have started as cheap as this, but they stayed on the job, they are on the job to-day, and have found pleasure and profit in poultry breeding. Follow in the foot-steps of those who have gone before. Try, try as they did.

LAYERS.

Your laying hens should at all times receive proper attention in both care and food, by doing the right thing, at the right time much is to be gained. The engineer by keeping his machine well oiled gets the best results and length of service with less friction and less wear and tear. Can't we also consider that by keeping poultry rightly, we can also expect best results from them? We do know that by hopper feeding and keeping food within constant reach at all times that fowls can be fed cheaper than if fed two or three times a day and given all they will eat. We also know that some require more feed than do others and require it oftener to be at their best.

It is our idea to hand out some ideas, to get you one and all to think, if you will do this, you will better study and know your fowls and their requirements, this will create more interest, it will make better breeders and fanciers, and it will also assure best results.

We don't want you to "Fuss" with them all the time, that is not our idea at all, but we want —what you do, to do right, in the best and cheapest way in time and money, we want poultry keeping to be a real pleasure for you. The hens will shell out the eggs if given a chance, it is up to you Mr. Poultryman.

THE OLD WORLD.

The several nations over the Atlantic are still at war with the conditions about the same as they were months ago, and still with no signs of peace. The price being paid, is beyond comprehension, if it is ever known, it will be one to stagger humanity.

It is a Worlds War indeed. And this condition exists in this 1915 enlightened (?) age. We can only ask —What is all this for and is there no Peace, while we sympathize and hope.

April 14th. 1865.

The people of the United States recall the tragedy that fifty years ago this date plunged a nation into mourning, the shooting of Abraham Lincoln in a theater in Washington. Even now, distant as we are from the dread day, patriotic Americans feel a tinge of sorrow for his taking, such as is seldom felt over the death of a public man in such a far away past. His name is held in honor, but more in affection for the many kindly qualities, the homely traits that sometimes hid from the undiscerning the real greatness of the man.

It were of little value to discuss the dire effects of this tragedy or to speculate upon what would have come, had he not been taken But certain it is that if Lincoln had lived, many of the mistakes of the reconstruction period would not have been made. The lot of the South would have been far easier, and the reconciliation that has now become a fact would have been brought about in a far shorter time, while most of the friction generated in the process would have been avoided, for the Great Emancipator would have without doubt proved himself to be also the Great Peacemaker.

It is well to take notice of every date connected with the life and works of Lincoln, for his was a personality the study of which will strengthen our Americanism and our manhood. He stands before us an inspiration to that which earnest souls of to-day are endeavoring to instill into us, true service to our fellow men.

Special Departments.

Our special departments should afford interest for many. In making these of greater value to our readers, we ask for special contributions of articles and notes of interest. Here are opportunities for all to give their experience with poultry, the results of their experiments and their aims for the future as well. Compare your notes with those of the others, the mode of your success, will be beneficial and helpful to others. We wish our readers to become personally interested in Everybodys and in all its departments and to fell free to contribute.

APPOMATTOX.

It is fifty years since General Lee surrendered to General Grant at Appomattox, Court House, Virginia. A half century of time, during which a united nation has gone forward in progress and development. "Take your horses home with you", said Grant to Lee, "you will need them to do your spring plowing". Those were the words of a real conqueror, who saw a new South ultimately established upon the shoulders of free and untrammeled labor. It is the same idea which Henry W. Grady, the great Atlantic editor, gave expression to, when he said: We are Americans and we fight for human liberty. The uplifting force of the American idea, is under every throne on earth. Our history has been a constant and expanding miracle from Plymouth Rock and Jamestown all the way. Amid our gathered pleasures let us resolve to crown the miracles of our past, with a spectacle of a Republic compact, united, indissoluble in the bonds of love—loving from the lake to the gulf—the wounds of war healed in every heart, as on every hill—serene and resplendent at the summit of human achievement and earthly glory—blazing out of the path and making clear the way up which all nations of the earth must come in God's appointed time."

It is a united country—no North, no South, no East, no West—which is our glory, and the secret of our greatness. That is the tremendous lesson of Appomattox.

THE GREAT WORLD'S FAIR.

Keep in mind the Great World's Fair, now being held at San Francisco. The poultry exhibit will be held there during the later part of November, at which time, we hope the American Poultry Association will also hold its meeting there.

From reports received, the Fair is a most pronounced success, the exhibits and attendance far exceed those of any previous Expositions of this kind. Events of this kind only come once in a life time, so we hope that many poultrymen will arrange to see this Fair and to also make an exhibit of their stock.

MAY.

A few of the prominent events and happenings during the month of May in the past are recorded below.

May 1 1876 Victoria proclaimed Empress of India.

May 3 1494 Columbus discovered Jamaica.

May 9 1803 First labor strike, Sailors, New York City.

May 10 1869 Atlantic and Pacific Coast conected by rail.

May 14 1796 First vaccination by Edward Jenner.

May 16 1864 "In God we trust" on U. S. Coins.

May 18 1804 Napoleon proclaimed Emperor.

May 21 1805 First labor organization, Tailors.

May 22 1790 Coal discovered in Pennsylvania.

May 23 1846 Mexico declared war against the United States.

May 24 1701 Captain Kidd hung in London.

May 25 1803 Ralph Waldo Emerson born.

May 29 1889 Trial by jury first put in force in Spain.

May 30 1792 First coins struck by U. S. were half dimes.

May 31 1889 The Johnstown flood.

PREPARE FOR THE SHOWS.

It is well now to begin to think and to prepare for the shows to be held this fall and winter, make your start now, plan your work so that you will have birds in shape at most any time.

MAY FOR REGAL CHICKS

Of all the months in the year **May** is my favorite month to get out the winners for the big winter shows. The weather is warm, vegetation is springing up, fertility running high and the chicks make the quick, vigorous growth necessary to win them the final triumph. To grow Champions, all conditions must be favorable. Why not choose this month to become acquainted with **Regal White Wyandottes?**

I GUARANTEE A GOOD HATCH

Mrs. C. C. Brubaker, McPherson, Kansas, writes me as follows:

From the thirty eggs I bought of you, eighteen chicks hatched, all were strong, vigorous fellows and how they did grow. I raised them all and they are by far the classiest chicks I ever had.

Eggs for hatching from twenty beautiful exhibition matings, $5. per 15, $9.00 per 30, $12.00 per 45, $24.00 per 100.

Dorcas matings composed of trap-nested heavy layers, $5.00 per 15, $15.00 per 50, $27.00 per 100.

Utility Matings $9.00 per 100.

Free—Send for 20 page catalogue and mating list.

Send one dime for the Regal White Wyandotte Book telling all about White Wyandottes.

John S. Martin, Box D, Port Dover, Can.

Making an exhibit is the first step towards poultry progress whether you win or not, if not, then you have at least learned something of benefit to you, you know how much or how little better the other fellow's birds are, experience if used the right way, is an asset. If you win your stock and eggs will be in demand and you will then just begin to be a regular poultryman. Show your birds and make your start this year, time counts. Do it THIS YEAR.

Wanted.

Note that we will take Classified Want advertisements for positions wanted, and anything in the poultry line at three (3) cents per word. Send in your want ads at once for the next issue.

We Practice What We Preach.

We preach that Everybodys is an advertising medium of merit. We believe that fact so thoroughly that throughout its pages you will find our own advertisements. They pay us or we would not run them. It is obvious, therefore, that if your proposition has merit an ad in this magazine will pay you.

LADIES.

Please note Mrs. Rice's Department, she would be pleased to hear from our lady readers and friends with notes of interest, news, etc., at all times. Kindly remember this and address Mrs. Irving F. Rice, Cortland, N. Y.

QUESTION.

Does Heavy Egg Production Result in Smaller Eggs?

We wish our readers to take up and consider this question and to write an essay for our publication. Give your experience, or give your opinions, it is a broad question for debate, with equal chance for all. Your views whether based upon experience and facts or not will be of interest to many readers. We expect to hear from many.

JOHN WANNAMAKER.

They credit John Wannamaker with this:

"If there is one enterprise on earth that a 'quitter' should leave severely alone, it is advertising. To make a success of advertising one must be prepared to stick to it like a barnacle on a boat's bottom. He should know before he begins it that he must spend money—lots of it. Somebody must tell him, also that he cannot hope to reap results commensurate with his expenditure early in the game. Advertising doesn't JERK; IT PULLS. It begins very gently at first, but the pull is steady. It increases day by day and year by year until it exerts an irresistible power."

Utility versus Fancy.

No Proof for Dividing Line Between the Two. Records Made by Standard Bred Fowls and So-called Utility. Equally as Good.

By J. Harry Wolseiffer.

To the inventor of the trap nest must go the thanks of thousands of progressive breeders throughout the United States, for the saving of thoroughbred fowls to the American people. If the trap nest had not told the tale, officially at laying contests, at the experiment stations and in the hands of America's progressive breeders, the utility craze now in full sway over this country would have harmed the standard bred poultry to such an extent that it would have taken years to recover. As conditions exist today the outlook is grave and it needs a united poultry press with facts and figures to set the people on the right track again. The Agricultural press has fostered the other side and no aid can be expected from that source. Poultry Keepers, especially those who have not as yet spent many years among the feathered tribe are apt to jump at conclusions, and the majority of the advocates of a certain egg type in the hen does not bear out in several years of trap nest work, if such a thing be true that a few poultry wizards could pick out the layers in any flock, any variety, why the use of the trap nest, why breed at all along certain lines when they can be seen in the flock and picked out by the so-called excepted egg type? There may be an egg type found in the future, but with the use of the trap nest for seventeen years and finding 200 eggers among standard bred fowls, 200 eggers among the so-called egg type, 200 eggers among some of no type at all, one has to be shown which is which. Egg production lies absolutely with the breeder, the finest looking fowls on earth can be made to produce as many eggs as the common looking scrub if they are bred along the proper lines for egg production, the color of the eye, shape of the tail has no action on the egg organs. A large comb fowl and a small comb fowl may be equally good as layers, why not? has it ever been proven "no theory—facts", why a big comb fowl should outlay the same sized fowl with a smaller comb; yet the utility advocates claim fine feathers, standard shape, cannot make good layers. Why? then these certified record fowls that are winning at the different shows, they have standard shape, and fair feathering, in other words if entered as Barred Plymouth Rocks, they do not

If ever a breeder deserved credit for loyalty to a breed and for special accomplishments, then Mr. M. R. Jacobus is that man. He has championed the Campine from the first, also being one of the first to introduce and to breed them in America. The success of his efforts is best seen in the Campines of to-day, compared with those of the past. Beside an improved quality in color and markings, they have been greatly improved in size, shape, style and vigor. They have been acclimated and are to-day as a breed in variety more sturdy, better layers and a better practical breed. Mr. Jacobus has produced many winners, being a consistent exhibitor from the first. Here are shown a pair of his birds with a record of their winnings. H. P. S.

look like Rhode Island Reds, or do the Leghorns winning look like Minorcas, or some other breed. In the Standard of Perfection is there any of the general purpose breeds, and those are the ones that come under the Utility vs Fancy proposition, that do not have shape enough, and size enough to carry a good heart, a pair of lungs, and egg organs large enough to produce a good number of eggs, we think not, of course if one wishes the Leghorn to be in the Wyandotte or Red class as far as weight is concerned that is a different matter. But are the Leghorn (utility) poultry keepers getting anywhere with this craze for weight and egg production, time will tell, the pendulum is already swinging back the other way. When the American people find that they can obtain just as good a layer from a standard bred fowl, as from the so-called utility fowl of all shapes and sizes, why they will pay the difference and take the egg production with the good looks every time. It is not the intention of the writer to imply that the utility breeder must resort to standard bred fowls, it is harder to gain a flock this way because of the closer culling. More characteristics are to be taught in the breeding operations. But the writer's point of view is to merely clear the atmosphere as to the claims that the two cannot be combined to breed any kind of a looking fowl so it is a good egg producer. But these breeders must not, unless backed by proof-lay claim to the fact that the standard bred fowl cannot produce as many eggs in 365 days as the so-called utility brand, for the proofs are two many in favor of the standard bred fowl. Columbian Queen the holder of the world's egg record in 365 days is of good Plymouth Rock type with fair color marking. Some of her off spring were winners at Lakewood, N. J. poultry exhibit. A cockerel from same strain won for his owner Mr. Jones at Madison Square Garden. In the same show was the winning Rhode Island Red, 209 eggs in the year. A winner under the blue in strong competition, at Woodbury, N. J. some weeks later the same hen won 2d in a strong class. This hen is the property of Mr. Peter Prasch, Paulsboro, N. J. Then comes McConnell the Wyandotte man with some of the dumpty type so-called that even the writer does not favor, but cleans up in laying—and win as well, and so it is goin all over this broad land of ours and yet the advocates of the utility fowls, make the claim that the fancier fowls do not lay—cannot lay—because their shape is wrong and their feathers pretty. It should be remembered now that the so-called fancier expert breeder is a good name made the poultry of this country what it is to-day, and after the battle is over it will be these self same progressive breeders to save it again, and help the thousands of deluded ones to gain back the shape of their varieties, until they look like the original. We have no use for any breeder who does not put utility first in his breeding aims, but it has been proven that this does not mean that another type must be taken, the so-called egg type, and that if a Wyandotte breeder, one cannot have a bay eye, white plumage and neat comb and come under the head of utility, they can possess all this and more and be the height of utility as records, officially made have proven, it lies wholly with the breeder in regard to shape, eye, color, etc., if they choose to ignore them the fowls that do not possess the good looks, can lay just as many eggs. But so can the fowls of the more painstaking breeder, there should be more give and take in the utility vs. fancy question and instead of a large dividing line, there should be none at all, standard bred poultry made in America should be good enough for us all.

FIRST PRIZE S·C· R·I· RED COCKEREL

OWEN FARMS EGGS FOR HATCHING

FROM OWEN FARMS UNEQUALLED MATINGS IN

Buff and White Orpingtons, White Rocks, White Wyandottes, S. C. Rhode Island Reds and S. C. White Leghorns.

ARE NOW HALF PRICE

THIS MEANS EGGS FROM THE FINEST MATINGS IN ALL AMERICA ARE $5.00 for 15. $9.50 for 30. $15.00 for 50. $25.00 for 100.

AND THAT EGGS FROM MY GRAND SECOND QUALITY PENS ARE $2.50 for 15. $7.50 for 50. $12.50 for 100.

Order Directly From This Ad And Save Yourself Time.

I refer you to former ads in this paper for the WONDERFUL RECORD OF OWEN FARMS BIRDS.

My Mating List is Free

and will give you the particulars of the matings from which these eggs come.

SPECIAL STOCK SALE

From May 15th to August 15th I will sell you adult birds of all qualities from my matings at just half the price the same birds would have brought prior to the breeding season. This opportunity comes only during these months and many of my customers take advantage of this sale each year.

UTILITY QUALITIES OF OWEN FARMS BIRDS UNSURPASSED.

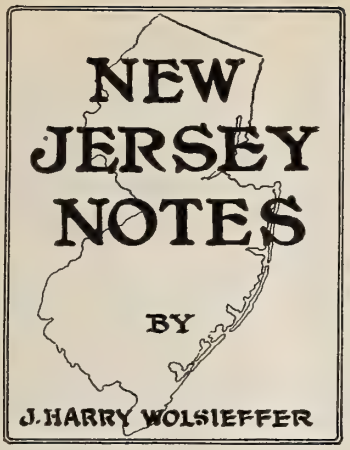
OWEN FARMS

163 William Street, Vineyard Haven, Mass.

MAURICE F. DELANO, Proprietor,
FRANK H. DAVEY, Superintendent.

Foxhurst Farm winners have a charm of merit peculiarly their own that has placed them 1st prize winners wherever shown. In S. C. Black Orpingtons they have ever been leaders and notedly at our livest and best shows. Here are shown four of their 1st prize winners at the late Madison Garden, New York Show, a description of which we gave in our report last month. Look them over, note their lines and similarity of quality, they are modeled bred with a purpose in view, with the character to reproduce quality. The Foxhurst Farms, Lime Rock, Conn. are specialists in S. C. Black Orpingtons.

H. P. S.



Bridgeton is the oldest Poultry Association in the state, holding each Thanksgiving Week its regular poultry exhibit, Paterson coming second. Both are live associations with a good bunch of progressive breeders on the membership role.

Newark with over three hundred members is the largest in the state, with every indication of pulling to the four hundred mark. Meetings are well attended because always one can find something interesting for the members.

A new Poultry Association was formed at Trenton with John M. Ward, Jr., President. A poultry exhibit will be staged this winter on up-to-date lines. This new association will in no way conflict with the old Mercer County Association, with head-quarters at Trenton.

Vineland will hold its Annual Show December 1, 2, 3, 4 with Henry P. Schwab and M. L. Chapman as judges. Cups with no strings attached will be offered as well as special and cash prizes which will draw a large entry.

The Executive Committee of the Vineland Poultry and Pet Stock Association held one of the most important meetings in its history. A committee was appointed to confer with the Port Morris, Millville, Bridgeton and West Vineland Associations to enlist the aid of the township committee, county prosecutor and board of free holders to offer a reward for the conviction of chicken thieves and do away with the dog and cat nuisance. But most important than all was the plan outlining the future Vineland International Egg Laying Contest, which will be under the control of the State of New Jersey, conducted on new and progressive lines. It will not be gotten up hastily but is to commence in the Fall of 1916, when, if the plans as outlined everything will be in readiness without a hitch. This much can be said. It will be run as a practical poultry keeper would run his own plant. The results then will be what every poultry keeper can use in his business. Under state control with the ideal soil and climate conditions that Vineland possesses. The fowls can do their best in the egg producing line. Again under state management, the records made will stand for something.

Glassboro is one of the live associations that are doing things. Several lectures will be scheduled on Poultry Culture and plans are being made to hold a poultry show. Many fine fowls are raised around this zone and a poultry exhibit would increase the interest for more.

Poultry conditions throughout the State are generally good, although the high price of poultry feeds have kept many beginners from starting poultry operations this Spring and many of the regular poultry plants, that each year increase their laying flock have kept at the 1914 figures. A few have reduced their Spring output of chicks while a few with bright visions ahead of high egg prices this Fall and Winter have increased their output.

Generally fertility has been good for the season of the year and weather conditions for the most part of the Spring ideal, the chicks hatched and developed finely, with every prospect of maturing on time for winter hen fruit. Taking the State as a whole, the output of chicks will be larger than in 1914, but not as large an increase as in from 1913 to 1914. There is every indication of better poultry conditions from now on and in spite of the high price of feeds, the little American Hen can pay a profit to any who will properly manage her.

Send us your order for the New Standard (note ad.) We have the assurance of receiving a supply to mail by May 10th.

This book is the most complete ever issued, is up-to-date with the new illustration, showing the ideal type, new text, and new admissions. You will want a Standard, so should order now. This standard will be official for eight (8) years.

New Jersey Branch of American Poultry Association, and New Jersey Federation of Poultry Associations amalgomate into New Jersey State Poultry Association.

On Washington's Birthday last, a joint meeting of the State Branch of the A. P. A., and the New Jersey Federation of Poultry Associations was held at the Poultry Department of the State Agricultural Experiment Station ot New Brunswick for the purpose of forming a State Poultry Association.

The New Jersey branch of the A. P. A. is very strong, being composed of about one hundred and fifty progressive and active poultrymen, many are among the strongest leading poultrymen in the country.

The New Jersey Federation of Poultry Associations has a membership of forty-one local poultry associations, each of the twenty-one counties being represented with one or more of these bodies.

The total membership of these associations which have joined in this Federation is over four thousand poultrymen who are working in a cooperative manner for the betterment and improvement of this important industry in the state.

Both these bodies decided at this

YOUNG'S STRAIN S.C. WHITE LEGHORNS
I HAVE NO OTHER BREEDS
My winnings at Madison Square Garden, 1915:
3 FIRSTS, 3 SECONDS, 4 THIRDS, 2 FOURTHS, 2 FIFTHS.
At Boston, Mass., January 1915:
5 FIRSTS, 3 SECONDS, 3 THIRDS, 3 FOURTHS, 2 FIFTHS
Many of my prize winners at Madison Square Garden were hatched after June 1st. You can do the same for very little money. Because of the country-wide business depression, I am going to sell my eggs at half price for the remainder of the hatching season.
WRITE FOR FREE MATING LIST
D. W. YOUNG, Orange Co., Monroe, N. Y. Box E-4.

joint meeting to amalgamate into a State Poultry Association for the purpose of the improvement of poultry husbandry in the state of New Jersey by stronger, more effective, and better co-operation of all organized poultry interests in the state.

A study of the Constitution and By-Laws will emphasize a few important facts, viz: that members of the state body must first be members of a local county association, that they become state members by pay a nominal fee, thus the state organization is really made up of local county association units. That the Executive Committee is large, being represented equally in each county. That the association, through its standing committees will use its influence to see that the poultrymen are taken care of in the state legislation and governmental proceedings. That the poultrymen of New Jersey have the opportunity of hearing lectures and seeing demonstrations connected with their industry by the best men along different lines from different parts of the world. That the poultrymen of this state be given all due publicity and that through co-operation of the members of the Association, they may secure poultry supplies at the most economic prices and their products be disposed of in the very best and most profitable channels.

Already a Co-operative system of marketing eggs through the association is in operation and is working successfully, and it is hoped that the large membership which the association already has will be very influential in giving the members advantageous prices in both their buying and selling operations.

At the annual meeting, the following officers were elected:

Pres. J. Harry Wolsieffer, Vineland, N. J. 1st Vice Pres. Chas. D. Cleveland, Eatontown, N. J. 2nd Vice Pres, E. L. Trewer, Freehold, N. J. Recording Sec. C. H. Hoagland, Ledgewood, N. J. Corres. Sec. V. G. Aubry, New Brunswick, N. J. Treas. C. N. Warner, Toms River, N. J.

Without exception all the county associations heard from to date of this writing have voted to enter the state association as a body, making a one hundred per cent membership. Note—We will publish in our next issue the constitution of above Association, it will be a good guide for others to follow and will insure strong and proper Poultry Organization. They were received to late for this issue.

OWENS FARMS.

Special. Eggs at Half Price.

Mr. M. F. Delano, owner of the Owen Farm, Vineyard Haven, Mass., has sent out a circular letter and is now offering his eggs for the balance of the season at Half Price.

Mr. Delano's stock and matings are the best he ever had and are giving the best results. We consider them cheap at any price when "Quality is Wanted". Breeders interested in Buff and White Orpingtons, White Rocks, White Wyandottes, S. C. Reds and S. C. White Leghorns have here the special opportunity to improve their stock from a line that is most popular and worthy. Mr. Delano's winnings for the past show season are superior to those ever made in the past and they include records made at all of the Great Shows of the year, Madison Square Garden, New York, Chicago, New York Palace, Boston, Allentown, New York State Fair, etc.

Mr. Delano's Half Price offer means, he will ship you eggs from his finest exhibition matings for $5 for 15, $9.50 per 30, $15 for 50 and $25 for 100 eggs.

From his grand second quality matings, of the same breding and blood lines $2.50 for 15, $7.50 per 50, $12.50 per 100 eggs.

Special Sale of Breeding Stock.

From May 15th to August 15th, Mr. Delano will offer for sale at special prices his breeding stock at half this value and less. Your wants will have Mr. Delano's personal care. Write him your wants. Mated Trios and Pens as well as large flocks a specialty. H. P. S.

ALWAYS MENTION "EVERYBODYS" When Writing Advertisers.

AUG. D. ARNOLD.

Special Priced Eggs.

SUSSEX—FAVEROLLES—CAMPINES.

Mr. Arnold advises us that he has completed his hatching and that for the balance of the season, he will sell eggs at greatly reduced prices as follows:

Red Sussex, 30 Eggs for $5.00, Buff and White Faverolles and Golden and Silver Campines, 30 Eggs at $3.00.

These are among the most popular varieties of the day. Mr. Arnold imported his own foundation stock. He is one of our oldest and most reliable and successful breeders. Here he offers special opportunities for one to start with a popular and coming variety. Address Mr. Aug. D. Arnold, Dillsburg, Pa. Mention Everybodys. H. P. S.

DAWSONS QUALITY CHICK FEED

(No corn, 30 per cent hulled oats.)

Dawsons Growing Mash

(30 per cent Oats, Flour or Rolled Oats.)
These feeds are wonders for good sturdy development.
Every bag guaranteed.

Hebe's here, May is here!
The air is fresh and sunny;
And the miser-bees are busy
Hoarding away golden honey.

Everybodys seems to have pleased Everybody.

The welcome was a royal one, one to urge all on to greater efforts.

You are lax in your duty, unless you have spoken to your neighbor, asking him to subscribe. Do your duty now.

This issue, like our last one, contains several articles of more than passing value. Everybodys should be read from cover to cover.

The proper feeding of chicks insures the proper growing of the plumage. If the breeders will but realize this fact fully, the results will be more than satisfactory.

Prepare now for shade for the chicks. The warm days are coming when shade will be one of the principal requirements to their proper growing. Don't over-look this, but plan ahead now, while in season.

There is nothing superior to a corn field for the chicks to run in. The cultivation that corn requires, is also required by the chicks. A patch of corn will not only supply proper shade and grow food, but it will also offer protection from crows, hawks, etc.

A girl may have a beautiful carriage, but that doesn't prevent her from wanting an automobile.

May work in the poultry yard is rather exacting, many little things require doing at this time. If left until later they will amount to so much more and harder labor. Do them now.

With corn up and the fruit trees in bloom, San Antonio, Texas, the other day had a snow storm; the first in twenty years. So we up here in the cold and bleak North should not be too sanguine of the coming of the grass, the leaves and the flowers.

Several States now have a Bird Day. In Utah several places, some of them private property, were dedicated as bird sanctuaries. The idea is a good and noble one that should be adopted by all states, for the more birds we have, speaking within reason, the better for the country.

Tell me not in mournful numbers,
They are but an empty dream—
Those seed catalogues I'm getting—
Are not just what they seem.

I have spent my hard-earned money,
Tightly to the seeds I've clung,
As I've lugged them often homeward,
Just to find that I'd been stung.

As a rule fertility is proving unusually good this season, reports at hand from many sections assure us of these facts. Still it is not just what is should be. That fertility can be generally improved is most reasonable to expect. We hope later to devote some special articles to this question. We also ask for special contributions based on actual facts and results attained.

The poultry breeders of England are weekly donating thousands of dozens of eggs to their sick and wounded soldiers. Arrangements are very complete to receive and ship them, and we can well imagine with what gratification they are received by patriots who have been at the front.

Senator Money, of Mississippi asked an old colored man what breed of chickens he considered best, and he replied:

"All kinds has merits. De w'ite ones is de easiest to find, but de black ones is de easiest to hide after you gits 'em".—Tit-Bits.

Did you vote your A. P. A. ballot? This is a duty that every member should give his attention to. Take an interest in the A. P. A. and in its work, and don't forget that, the general success will also include you.

There is still more talk of another association, and there may be room for two or three or more. But the old A. P. A. is pretty good after all and if those who have real poultry interests would but use their efforts to the advantage and betterment of the A. P. A. the results would be greater and of more effect than a new organization could give. So let us stand by, with a determination and faith, and give our best efforts to the A. P. A. Let's be loyal to our selves and to our interests as well.

The bonehead championship is claimed for a gentleman who bought a quarter's worth of quinine capsules and cracked them with a hammer before taking.

The "Eggs for Hatching" business has come back this spring, better than for some years past. Several breeders have written us that they are all sold out, that the orders have been double those of last and other years. This is gratifying, indeed, and a condition that pressages much for the future of the chicken business.

CERTIFIED LAYERS
America's Greatest Trap Nested Strain
S. C. Buff Orpingtons

Our 229 Egg Record is official. We lead in America's largest Egg Laying Contests.

OLD FORGE POULTRY FARM Spring Grove, Pa.

Our SHOW Record needs no explanations as our wins at Allentown, N. Y. State Fair, Trenton, etc. speak for quality.

HATCHING EGGS which will prove a splendid investment at reasonable prices with breeders being trap nested.

(We guarantee 75 percent fertility and replace without extra charge)

Place your order NOW many Winners and Record Layers have been hatched in April.

OLD FORGE POULTRY FARM
Spring Grove, Pa.

We do not know that during the past years, the breeders have re-arranged their mode of mating and breeding, but they have reduced the number of females in their pens by the closest possible kind of quality selecting. This kind of mating has resulted in better stock and more of it. The breeders to-day are offering quality far better than ever before and also at most liberal prices. The buying of eggs for hatching should be a duty with all that seek to improve their stock.

Poultry associations in all states are preparing for their NEXT. With prospects for a larger crop than usual. Every county should hold a poultry show, and every State should hold a great big State Show. Select your dates carefully, have early and late shows, as well as some in December and January, but don't conflict in dates, give all a chance to show and to exhibit when their birds are at their best.

New Jersey Associations have formed a State Association with close to 4,000 members. This is a step others should also take, for we can see in this many advantages for all concerned.

The editor of the Lowell (Mich.) Ledger having exhausted all of the stock methods of getting what is due him on subscriptions, has hit upon something original. In a recent issue he said: "The handsomest,keenest and most brilliant man in this community owes us on subscription, and we are expecting him to favor us with an early call". Within a few hours fifty different citizens had dropped in and handed the editor the price of a year's subscription and in each case the trend of conversation was that they would never have thought of it if they had not seen the notice in the paper.

The subscriptions are coming in splendidly, during the past month we received nearly 500 from the state of Missouri alone, and better than 1,400 from other Southern states. The mid-west is also busy and has made a good showing. The breeders like "Everybodys" and are recommending it to their friends. This condition should exist all over. Have you done your share? We expect this from you.

But, boys, also bring along some of your birds, just to make it more interesting for all. We also wish to see your stock, we know its good, but show it and compare it with the "BEST"'

No industry that we happen to know of, is better represented by its press than is Poultry. The poultrymen surely have much to expect and to look forward to monthly for in the main I believe the press is of a high quality and very sincere in its efforts.

He—Once for all, I demand to know who is master in this house?

She—You'll be happier if you don't find out.—Philadelphia Ledger.

Keep in mind the great San Francisco Exposition and the Poultry Show to be held there in November. Reports assure us that this is the greatest "World's Fair" ever held. The poultry show will also be the greatest. We will hope to meet many friends there and to make thousands of new ones.

"What's the matter with your wife, anyhow?"

"She's got a case of flat tire."

"Wahddye mean, a flat tire?"

"She's weary of living in a flat."

We wish to congratulate Editor John H. Robinson, of Farm Poultry. His splendid work is having a far-reaching effect. Farm Poultry is surely better than ever before.

The early robin, favored bird,
Much prominence doth take,
But no one ever says a word
About the early snake.

The early jonquil gets a song
From writers in the press.
The early onion grows along
In utter loneliness.

Thus some must plod and make no hits
Throughout this mortal strife,
While some are public favorites;
'Tis ever thus in life.

The wise men of the "West" who attended the late Madison Square Garden New York Show have all reported home safely, and were really delighted with the show, and little, old New York town. Both the Show and the "Ruby's" were admired and we have the promise of several to come again, and to bring more of the Western breeders with them. We welcome all.

LEGHORNS

LICHTENWALTER'S Buff Plymouth Rocks

The champion quality line of America.

E. H. Lichtenwalter, Box E. Girard, Pa.

In England they advertise "Cross-breds" both stock and eggs. Here in America we are busy with the Standard breeds alone, and it surely keeps all on the jump.

He took his winter flannels off,
He put his coat upon the shelf.
Then next he took a little cough,
And now he's taken off himself.

Most able judges firmly say
That nursing grudges does not pay.

In prehistoric days a man played the love game with a club; but now he finds it wiser to lead with diamonds and keep the club hidden until after marriage.

We advise the liberal and constant use of "French's Poultry Mustard" for the young and growing stock, as well as for the breeders and layers. This is the "Original" Poultry Mustard in America, and is being used and recommended by large and small breeders and poultry keepers alike.

Having used it for three years we can well recommend it for improving fertility, that it helps the growth of plumage, and that it increases egg production. Both with us and with those who have used it on our recommendation it has given results and perfect satisfaction. Try it.

An "Idealist" is a man who believes in the "eternal love on one man for one woman"—after another.

Buttercups, Their Improvement and Future

Breeders Have Formulated a Satisfactory Standard. By Proper Handling This Breed is Sure to Become Popular.

By Judge Wm. M. Anderson.

For the past two years I have made a very careful study of both the Buttercup breed, their merits and their future popularity. Many times in each show where I have judged these classes, breeders and exhibitors have approached me with questions along these lines. Are the Buttercups here to stay? Would you advise me taking up Buttercups? Do you consider that they would be a profitable breed? Will they lay well in comparison with other breeds? Or do you think their merits have been overestimated?

It is very difficult to answer these questions. First I must admit I never bred Buttercups personally but have watched the results in several breeders yards and from close observation, feel that I have a very good insight into the bred. As to whether Buttercups will remain in popularity is up to the Breeders and the Club. The great handicap under which Buttercups are struggling is that a wide and different opinion has existed among Breeders as to correct color and type of the breed. Even to-day in the show room I find a wide difference among exhibitors just what constitutes a good specimen. But I am glad to say that Breeders are becoming more universal in their ideas of correct markings and type. The big difference that existed for a long time was the difference of opinion in regards correct feather markings of the female. Many breeders held that the laced feather should be the accepted idea while others advocated the feather with several parallel rows of elongated spangles. These elongated spangles really reduce to two rows of bars, each bar terminating in the web of the feather and in no instance running across the quill. This latter marking has I feel, been accepted by the majority of breeders and now constitutes the ideal feather according to the Club Standard. There also exists some difference among exhibitors as regards spangling on the lower breast. Some feel that the female should have a clean buff breast, but from the laws of nature, it would be difficult to breed clear colored breast females and maintain good black markings on the back, wings and fluff.

The general indications are now that the breeders will become satisfied with the present standard and that it will prove satisfactory for at least a few years, which will be of great benefit to the breed. The ideal Buttercup will become settled and breeders in general will know what constitutes a good specimen and there will be less misunderstanding and dissatisfaction among those who fancy them. This will lead to a better general understanding of the breed and will tend greatly to increase their popularity.

In regards ideal shape, I feel that all breeders are agreed on this point and there is little difference, but I must say right here that if the breeders expect to have standard weight birds, they must exhibit much larger specimens than they are at present as 6½ pounds for a cock and 5 pounds for a hen requires good size birds and the average Buttercup in the show room weighs little more than a Leghorn. There has been much discussion in the past in regard to ideal combs, but the new standard better states the ideal comb and I feel that breeders all have now the ideal comb in mind, though I must say that to date I have only seen one bird that approached the ideal and that was the Second Buffalo cockerel. The ideal comb has a short single leader. The cup should be round and well closed at the rear. The number of spikes surmounting the cup is not so important as long as same are equally spaced and of proportionate height. The cup on a Male should not be over one inch or one inch and a quarter in diameter and in the female the cup should not be over one half inch in diameter and preferably less. The inside of the cup should be clean and smooth and free from tendency to center sprigs or roughness. The cup should be well placed on the birds head so that when the head is held in normal position the cup is level, not inclined backwards. Long leaders always give an inclined comb and should be avoided. The cup and leader should also be set as low as possible on the head. Inclination to leaf or antler combs are very serious. In the scale of points 14 is allowed for comb and this places considerable value on this section.

There is one point however in the new-standard that I fear is wrong and will be a detriment to the breed. The ear lobe color in the new standard calls for solid red. Prominent authorities maintain that a bird having red lobes will lay a tinted egg. This seems to be a firm law of nature and I doubt if can be broken. In Buttercups, especially the female there is a strong tendency towards white lobes and I feel it is a mistake not to breed for white lobes.

I am glad to say that Buttercups have shown a marked gain in perfectness from the beginning. At Buffalo, Boston and New York shows the winning birds exhibited merit and showed careful breeding. The color of both the males and females is becoming more uniform as well as better combs are being exhibited. The winners at the above shows presented uniform type and in many instances very good feather markings. The males nearer approach ideal color markings than do the females though several females have been shown that were very uniform in spangling and freedom from laced feathers.

In regards to the utility value of Buttercups to the commercial man I am convinced that they are worthy of consideration. From observation I can say that the Buttercup female lays a very nice egg and many of them. Buttercups are also non-setters which is of great importance to those who desire a strictly egg breed. Having seen many dressed for table use, I can truthfully say they make a good appearance as small broilers or four pound roasters. Further they have one added advantage over the popular Leghorn in being very gentle and docile.

If breeders will breed carefully from only good stock and only sell such stock from there yards for breeding purposes and carefully select all hatching eggs from good individuals,I think there is no question but that Buttercups will make good and find a place among the popular fowls bred in this country. It is the selling of inferior stock when there is a good demand that will do more to hinder the progress of any new breed than all other things combined.

Barred Plymouth Rocks

Is Their Future to be Sunshine or Storm.

By Haldie Nicholson.

Do our breeders ever give the above title careful study?

To start with, what are the drawbacks which this breed is meeting with to-day? First Drawback;—Competition. Not from one breed only but from many breeds which are at their zenith. The Barred Rocks are not unlike the Rock-bound coast of New England where the waves and storms are ever beating. The Barred Plymouth Rock has with-stood all the storms of new and old breeds, which are ever beating against the rock she stands on, but can she withstand the ever increasing storms forever?

Second Drawback;—This will explain itself in the following conversation. While attending the last New York Show there were several of the Barred Rock breeders sitting one evening in the Prince George Hotel discussing the Barred Rocks. I made this remark; "No breeder of a Barred Rock can tell the Standard color of a Barred Rock." In fact, I have found that the Standard more or less, among the breeders, is what you have got in your own yards, and this has gotten in the system so much of the Barred Rock breeders, I want to ask you, how long is the Barred Rock going to stand this strain? Before the Barred Rock public opinion is going to get disgusted with the whole Barred Rock Business and leave it forever. I want the Barred Rock breeder to remember that from a purely business point of view we have only a few who are making a business out of the raising and selling of Fancy Barred Rocks, while there are thousands who keep the Barred Rocks for the love of this Fancy, and who pay out rather than draw in from the keeping, raising and showing of Barred Plymouth Rocks. They are the pure Fanciers.

What I want to impress upon you in this article is, how can we come to some definite decision of what is the proper Standard to judge our Barred Rocks by? At the present time I claim that the Barred Rocks are not getting judged by our Standard. This, I am backed-out in by many of our leading breeders.

I will give you an idea of how our Standard should be applied, and will cite you a case where I made a decision at the Rochester show on two cock-birds. To make it as plain as possible I will call the bird with the even surface No. 1. This bird, while he was even from tip to tip had not a clean, white bar. The other bird I will call No. 2. Now, No. 1 had No. 2 beaten on evenness of surface. No. 1 had No. 2 also beaten on hackle; head-points I called about even. Then No. 2 beat No. 1 in the following sections;— Wing, back, breast, fluff, tail; also had him beaten in cleanness of barring and distinctness, both in under and surface-color, but still this bird did not blend from tip to tip as one color. Now, had I not matched these two birds together, section by section, and had let my judgment been carried away by evenness of surface I should have given the first prize to No. 1, but I awarded the first prize to No. 2 bird, because he beat the other bird when they were compared.

Now, I believe that every judge owes it to the breeders and Standard to apply the above test in every case before he makes his final decision. Our Standard reads that judges should carefully consider each section No section to be ignored. Each section is regarded as important by the American Poultry Association, and should a judge pass a specimen without considering all points the exhibitor shall be allowed the privilege of protesting the decision.

Now, gentlemen, it is left to you, whether you want your birds judged by the Standard or not. I want to tell you candidly that I know of a show this last Winter and a big one at that where if the above method which the Standard calls for had been applied what a different change there would have been in the decisions.

There is another thing that I want to tell you in regards to judging Barred Rocks, which I find that a great many of our judges use. They go from one end of the alley to the other trying to carry in their mind's eye the different birds. You must remember in every show-room that there are different shades of light. There are certain lights that will suit a Barred Rock, but if this same Barred Rock was used in a different light you could then see his defects. Therefore, all final decisions should be made in the same light.

I want to say something in regards to the good, even-surfaced bird. To the amateur, or I might say to a good many of the Barred Rock breeders, that evenness of surface in the Barred Rock male covers a multitude of sins. You will find in 99 cases out of 100 where a beautiful, bright, snappy surface is devoid of Standard requirements in nearly all sections in undercolor. As I have previously stated in this article a good many breeders calls the Standard what he has got in his own back yard. Those who have got the surface color will strongly advocate this bird. They have a good many claims and just claims, but this bird is not to our present standard requirements. Another thing about the surface bird, unless you are a careful student of mating and breeding, is that you will never be able to produce anything from this kind of a bird, for if he is not properly mated he will produce you nothing.

I have always been a very strong

Kills Lice Instantly

Shake it on or put it in the dust bath. Effective without irritating the lungs or skin. In sifter top cans, 50c. and 25c.

40,000 dealers.

98 PRATT FOOD CO. Philadelphia, Chicago and Toronto

advocate of under-barring, because it applies to our present Standard requirements.

I will cite you another case which is in my own yards. This applies to a cockerel which I have heading one of my pens. I call him a surface-colored bird. When I say this I mean that he is not barred down to his skin as the Standard calls for. Now, this bird I claim to be the best surfaced bird that there is in America to-day. There have been several of the best breeders in America who have examined this bird, and agree with me that he is the most brillant and beautiful surfaced bird that they have ever seen. Still, with all these great qualities I claim he is not a Standard colored-bird. As I have said before in this article, the brillant surfaced bird covers a multitude of sins. This bird has not been exhibited for the simple reason that he is the only male bird that I have left, from a special mating that I have had working for the past 2 years. I would not want him to be judged by the Standard, as he would be defective, in under-color which our Standard demands.

It is now up to the breeders to get together and finally decide once for all for a future Standard for the Barred Plymouth Rocks, whether we are going to have the even surfaced color bird or whether we are going to have the bird which is barred to the skin as our preference in the future. I say, let us have one thing or the other, and let us have our birds judged by this Standard, not by the preferences of the judges. I believe, to-day, that there is no Standard color of a barred rock, and there is no breeder who does not have a preference for some shade of color. Therefore, I say that every bird should be judged on its merits. The light, medium and dark birds should all stand the same chance, as long as they have the Standard requirements, distinctness and cleaness of barring; barring which carries character with it; barring as nearly as possible, straight across the feather. V shaped barring should be a defect and a bad one.

Why I have always been a strong advocate of under-barring is that I beleive under-barring is what our Stardard demands to-day, and the under barred bird will always reproduce himself and is a strong breeder. The demand for grand under colored birds has always been good, and there is always a demand for such birds. Remember, while I am talking under-barring, I mean birds with clean, distinct surface color as well.

I don't know of anything more beautiful than a grandly under-colored bird with clean, distinct under-barring. What I mean by clean under-barring is that the light bar shall be as clean and distinct at the bottom of the feather as it is on the surface. It is a pleasure to breed such birds as these with this barring.

I have found through my years of breeding Barred Rocks that my customers have always demanded birds which are barred to their skin with clean surface. This applies both to the darker or lighter bird. As one can have a clean, distinct color even on a dark bird. I have never yet received an order asking for a bird, with surface color only, I might say the demand for good under-colored birds and strong colored breeders has always been good with me. I don't know that I ever received more than a $5 bill for a surface colored bird since I have been breeding Barred Rocks. In fact, I have never asked for more than this for such a bird. I have sold in one season, on the other hand, 21 male birds from $50 up to $250 each and every one of these birds were distinctly and clearly barred to the skin. This is what I find the Barred Rock buyer and breeder demands.

Do you wonder now why I am advocate for under-barring? I know that the fanciers want the under-barring and do not want the surface colored birds at any price. As far as breeding is concerned you can breed surface colored birds far easier than you can the under barred birds, and as a rule you will find the surface colored bird always an even colored bird.

Now, I have stated the facts as I find them and it is up to the Barred Rock Fancier to decide what he wants.

Ed Note—We do not agree entirely with Mr. Nicholson in the above. But we print it to give all sides of all questions and "Fair Play." In theory he is right and we only regret he did not go more fully into the question of both Surface and under-barring. We will hope to Answer this in our next. H. P. S.

Black Leghorns of To-day.

Black Leghorns Are Bred To-day With Quality That Rivals Other Varieties.

By Wm. H. Manning.

Several years ago, I had the opportunity of buying a small flock of Black Leghorns at nearly market value. The price being very reasonable and the birds of fair quality, I considered it a good investment. At that time I was not a staunch admirer of Blacks as I am to-day and further did not realize the good qualities of the Black Leghorn. I simply bought them because they were a bargain and offered a good chance for investment.

There were in all twenty seven females and two males. From them I mated two pens and started breeding Blacks. As I have stated I did not have any particular fondness for the breed but thought perhaps there would be some demand for them and decided that since we breed other varieties of Leghorns we should also have the Blacks. It was not long before I began to realize that from an egg producing standpoint this new variety was fully the equal of any of our other varieties. Also the eggs hatched remarkably well and we had little mortality among the chicks. For two years I kept this flock of Blacks and at the end of that time realize I had found the best variety of the Leghorns. This flock though above the average in quality was not of the sort that I desired for a foundation. I had now decided to breed and boom Blacks being satisfied that they were worthy of a better place among the Leghorn varieties. After some correspondence I was fortunate in securing the entire Flock of Blacks of Mrs. Howes of New Berlin, N. Y. I might add that her flock was pure Wychoff strain and was largely imported blood. The first purchase of Blacks were inclined to run very dark in leg color and with considerable purple in their surface color. In these new birds there was a beautiful green sheen to all the birds with sound yellow legs on the majority of them. Also being of English origon they were of good size. They, however had two characteristics that I realized must be bred out before they would be accepted by breeders as good Leghorns. These two features were the heavy, beefy, English combs and tendency towards high and pinched tails.

By careful breeding it was not long before these combs and tails were Americanized and to-day our Blacks exhibit most excellent type with very good combs. I have succeeded in maintaining the rich yellow leg together with the rich lustrous sheen to their plumage. These Blacks of to-day can hardly be said to resemble the Black Leghorn of a few years ago and are gaining in popular favor each year. The old time and original bird with dark legs did not appeal to the buying public and of course were held in obscurity until the breeders of recent years realize that if this breed was to gain popular favor they would have to have the same yellow legs that is characteristic of all other varieties of the Leghorn family.
